Building Chatbots with Python Sumit Raj,2018-12-12 Build your own chatbot using Python and open source tools. This book begins with an introduction to chatbots where you will gain vital information on their architecture. You will then dive straight into natural language processing with the natural language toolkit (NLTK) for building a custom language processing platform for your chatbot. With this foundation, you will take a look at different natural language processing techniques so that you can choose the right one for you. The next stage is to learn to build a chatbot using the API.ai platform and define its intents and entities. During this example, you will learn to enable communication with your bot and also take a look at key points of its integration and deployment. The final chapter of Building Chatbots with Python teaches you how to build, train, and deploy your very own chatbot. Using open source libraries and machine learning techniques you will learn to predict conditions for your bot and develop a conversational agent as a web application. Finally you will deploy your chatbot on your own server with AWS. What You Will Learn Gain the basics of natural language processing using Python Collect data and train your data for the chatbot Build your chatbot from scratch as a web app Integrate your chatbots with Facebook, Slack, and Telegram Deploy chatbots on your own server Who This Book Is For Intermediate Python developers who have no idea about chatbots. Developers with basic Python programming knowledge can also take advantage of the book.

Deep Learning with Structured Data Mark Ryan,2020-12-08 Deep Learning with Structured Data teaches you powerful data analysis techniques for tabular data and relational databases. Summary Deep learning offers the potential to identify complex patterns and relationships hidden in data of all sorts. Deep Learning with Structured Data shows you how to apply powerful deep learning analysis techniques to the kind of structured, tabular data you'll find in the relational databases that real-world businesses depend on. Filled with practical, relevant applications, this book teaches you how deep learning can augment your existing machine learning and business intelligence systems. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology Here's a dirty secret: Half of the time in most data science projects is spent cleaning and preparing data. But there's a better way: Deep learning techniques optimized for tabular data and relational databases deliver insights and analysis without requiring intense feature engineering. Learn the skills to unlock deep learning performance with much less data filtering, validating, and scrubbing. About the book Deep Learning with Structured Data teaches you powerful data analysis techniques for tabular data and relational databases. Get started using a dataset based on the Toronto transit system. As you work through the book, you'll learn how easy it is to set up tabular data for deep learning, while solving crucial production concerns like deployment and performance monitoring. What's inside When and where to use deep learning The architecture of a Keras deep learning model Training, deploying, and maintaining models Measuring performance About the reader For readers with intermediate Python and machine learning skills. About the author Mark Ryan is a Data Science Manager at Intact Insurance. He holds a Master's degree in Computer Science from the University of Toronto. Table of Contents 1 Why deep learning with structured data? 2 Introduction to the example problem and Pandas dataframes 3 Preparing the data, part 1: Exploring and cleansing the data 4 Preparing the data, part 2: Transforming the data 5 Preparing and building the model 6 Training the model and running experiments 7 More experiments with the trained model 8 Deploying the model 9 Recommended next steps

Dynamics of Critical Internet Culture (1994–2001) Geert Lovink,2009 This study examines the dynamics of critical Internet culture after the medium opened to a broader audience in the mid 1990s. It is Geert Lovink's PhD thesis, submitted late 2002, written in between his two books on the same topic: Dark Fiber (2002) and My First Recession (2003). The core of the research consists of four case studies of non-profit networks: the Amsterdam community provider, The Digital City (DDS); the early years of the nettime mailinglist community; a history of the European new media arts network Syndicate; and an analysis of the streaming media network Xchange. The research describes the search for sustainable community network models in a climate of hyper growth and increased tensions and conflict concerning moderation and ownership of online communities.

The Spiritual Background of Early Islam Bravmann,2009-01-31 In a series of essays devoted to key terms and ideas in Islam, Bravmann argues on the basis of pre-Islamic and early Islamic texts for an Arabian background to the rise of the religion. In pursuing a through philological examination of the evidence, Bravmann finds core values and ideas of Islam deeply embedded in ancient Arab linguistic expression. His work continues to provide a critical element in the debates about the emergence of Islam and cannot be ignored by anyone trying to assess the complex historiographical problems that surround the issue.

Studies in Islamic History and Institutions Shelomo Dov Goitein,2010 Goitein s selection of studies dealing with Islamic institutions and social history offers a general introduction to Islamic civilization by one who lived all his life with Islam. His fruit of specialized research gives a rounded view of important aspects of Islamic civilization and provides the student with an opportunity to acquaint himself not only with the results of research, but

also with the methods by which they were obtained. With a new foreword by Norman A. Stillman

Deep Learning with R Abhijit Ghatak,2019-04-13 Deep Learning with R introduces deep learning and neural networks using the R programming language. The book builds on the understanding of the theoretical and mathematical constructs and enables the reader to create applications on computer vision, natural language processing and transfer learning. The book starts with an introduction to machine learning and moves on to describe the basic architecture, different activation functions, forward propagation, cross-entropy loss and backward propagation of a simple neural network. It goes on to create different code segments to construct deep neural networks. It discusses in detail the initialization of network parameters, optimization techniques, and some of the common issues surrounding neural networks such as dealing with NaNs and the vanishing/exploding gradient problem. Advanced variants of multilayered perceptrons namely, convolutional neural networks and sequence models are explained, followed by application to different use cases. The book makes extensive use of the Keras and TensorFlow frameworks.

Good Taste, Bad Taste, and Christian Taste Frank Burch Brown,2000-09-28 Christians frequently come into conflict with themselves and others over such matters as music, popular culture, and worship style. Yet they usually lack any theology of art or taste adequate to deal with aesthetic disputes. In this provocative book, Frank Burch Brown offers a constructive, ecumenical approach to artistic taste and aesthetic judgment--a non-elitist but discriminating theological aesthetics that has teeth but no fangs. While grounded in history and theory, this book takes up such practical questions as: How can one religious community accommodate a variety of artistic tastes? What good or harm can be done by importing music that is worldly in origin into a house of worship? How can the exercise of taste in the making of art be a viable (and sometimes advanced) spiritual discipline? In exploring the complex relation between taste, religious imagination, and faith, Brown offers a new perspective on what it means to be spiritual, religious, and indeed Christian.

Machine Learning Pocket Reference Matt Harrison,2019-08-27 With detailed notes, tables, and examples, this handy reference will help you navigate the basics of structured machine learning. Author Matt Harrison delivers a valuable guide that you can use for additional support during training and as a convenient resource when you dive into your next machine learning project. Ideal for programmers, data scientists, and AI engineers, this book includes an overview of the machine learning process and walks you through classification with structured data. You'll also learn methods for clustering, predicting a continuous value (regression), and reducing dimensionality, among other topics. This pocket reference includes sections that cover: Classification, using the Titanic dataset Cleaning data and dealing with missing data Exploratory data analysis Common preprocessing steps using sample data Selecting features useful to the model Model selection Metrics and classification evaluation Regression examples using k-nearest neighbor, decision trees, boosting, and more Metrics for regression evaluation Clustering Dimensionality reduction Scikit-learn pipelines

Transfer Learning for Natural Language Processing Paul Azunre,2021-08-31 Build custom NLP models in record time by adapting pre-trained machine learning models to solve specialized problems. Summary In Transfer Learning for Natural Language Processing you will learn: Fine tuning pretrained models with new domain data Picking the right model to reduce resource usage Transfer learning for neural network architectures Generating text with generative pretrained transformers Cross-lingual transfer learning with BERT Foundations for exploring NLP academic literature Training deep learning NLP models from scratch is costly, time-consuming, and requires massive amounts of data. In Transfer Learning for Natural Language Processing, DARPA researcher Paul Azunre reveals cutting-edge transfer learning techniques that apply customizable pretrained models to your own NLP architectures. You'll learn how to use transfer learning to deliver state-of-the-art results for language comprehension, even when working with limited label data. Best of all, you'll save on training time and computational costs. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology Build custom NLP models in record time, even with limited datasets! Transfer learning is a machine learning technique for adapting pretrained machine learning models to solve specialized problems. This powerful approach has revolutionized natural language processing, driving improvements in machine translation, business analytics, and natural language generation. About the book Transfer Learning for Natural Language Processing teaches you to create powerful NLP solutions quickly by building on existing pretrained models. This instantly useful book provides crystal-clear explanations of the concepts you need to grok transfer learning along with hands-on examples so you can practice your new skills immediately. As you go, you'll apply state-of-the-art transfer learning methods to create a spam email classifier, a fact checker, and more real-world applications. What's inside Fine tuning pretrained models with new domain data Picking the right model to reduce resource use Transfer learning for neural network architectures Generating text with pretrained transformers About the reader For machine learning engineers and data scientists with some experience in NLP. About the author Paul Azunre holds a PhD in Computer Science from MIT and has served as a Principal Investigator on several DARPA research programs. Race and Color in Islam Bernard Lewis, 1971

Schools of Koranic Commentators Ignác Goldziher, 2006 Goldziher, the greatest Islamicist of his day, and one of the most profound and original scholars in Europe in an age that produced veritable giants in this field, is presented here with what he considered his great opus, first published in 1920 in Leiden. Since his study tour in the East, 1873-1874, he had such a command of Arabic so as to discuss matters of dogmatics, fiqh, poetry, and syntax with local scholars. The work is largely based on his study and translation of Arabic primary sources. He treats the evolution of the science of tafsir from its most elementary stage, the 'Uthmanic' recension, down to early twentieth century interpretations of Rashid Rida and Syed Ameer Ali, touching upon dogmatics, asceticism, mysticism as well as rationalism. The translator, an old hand at translating Goldziher, displays a sensible, pragmatic attitude towards the considerable problem presented by Goldziher's style.

Dark Fiber Geert Lovink, 2002 The Internet is being closed off by businesses and governments intent on creating an environment free of dissent. In this text, the author covers concerns and issues of navigation and usability without losing sight of the agenda of those who control hardware, software, content, design and delivery.

Hooligan Geoffrey Pearson, 1983-06-09 Discusses views on crime committed by young offenders, and law and order in Great Britain, from 1603 to 1981.

Christianity and Islam Carl Heinrich Becker, 2019-11-25 Discover the historical points of connection between Christianity and Islam in Carl Heinrich Becker's compelling book. Delve into the rise of Islam and the influence of Christianity upon the development of Muhammad, and learn about Muhammad's knowledge of Christianity. Explore the similarity of Christian and Islamic metaphysics during the middle ages and the ways in which Christian influence affected Islam, including the development of a clerical class and the theory of marriage. With a focus on the limits of treatment and different points of view, this book is a must-read for anyone interested in the intersection of these two major religions.

Mohammed Tor Andrae, 2013-02-01 Originally published in 1936. This volume discusses the Islamic faith in the perspective of the ancient Arabian monotheism and its similarities with Christianity and Judaism. The similarities not only in dogma, but also in the ritual of Nestorian Christianity are discussed as well as an interpretation of Mohammed's religious personality.

The Dhvanyaloka of Anandavardhana with the Locana of Abhinavagupta Anandavardhana, 1990 For nearly a thousand years the brilliant analysis of aesthetic experience set forth in the Locana of Abhinavagupta, India's founding literary critic, has dominated traditional Indian theory on poetics and aesthetics. The Locana, presented here in English translation for the first time, is a commentary on the ninth-century Dhvanyaloka of Anandavardhana, which is itself the pivotal work in the history of Indian poetics. The Dhvanyaloka revolutionized Sanskrit literary theory by proposing that the main goal of good poetry is the evocation of a mood or flavor (rasa) and that this process can be explained only by recognizing a semantic power beyond denotation and metaphor, namely, the power of suggestion. On the basis of this analysis the Locana develops a theory of the psychology of aesthetic response. This edition is the first to make the two most influential works of traditional Sanskrit literary and aesthetic theory fully accessible to readers who want to know more about Sanskrit literature. The editorial annotations furnish the most complete exposition available of the history and content of these works. In addition, the verses presented as examples by both authors (offered here in verse translation) form an

anthology of some of the finest Sanskrit and Prakrit poetry.
