*Modelling the T-34/76* Jorge Alvear, Mig Jimenez, Michael Kirchoff, Adam Wilder, 2006-09-26 The Russian T-34 was the most influential tank design of World War II, with its sloping armour, heavy hitting firepower and rapid mobility. It first saw combat in the summer of 1941, and its qualities soon set it apart from other medium tanks of the period. However, its battlefield superiority did not last long, and it was soon matched by German designs such as the Panther. Several models, designated by years, were produced between 1940 and 1943, featuring changes such as upgunning (model 1941) and redesigning the turret (model 1943). More T-34s were produced by the Allies than any other tank. The T-34-76 was produced until mid-1944, when it was replaced with the better armed T-34-85, the subject matter of a planned future Osprey Modelling title. The modeling community is well served with several full kits and a plethora of aftermarket items to cater for the interest in the T-34/76, and it remains one of the most popular World War II Allied modeling topics with new kits being released. This title guides the reader through the basics of assembly and finishing, before progressing to more advanced modelling projects using conversion kits and extensive scratchbuilding. It covers both 1/35- and 1/76-scale versions of the T-34/76.

**T-34-85 vs M26 Pershing** Steven J. Zaloga, 2011-12-20 A hotly-debated topic amongst tank buffs is of the relative merits of the Soviet and American tanks of World War II. Using recently revealed documents, Steven Zaloga sheds light on the crucial tank battles of the Korean War as the rival superpowers' finest tanks battled for supremacy. The Soviet-equipped North Korean Peoples Army initially dominated the battlefield with the seemingly unstoppable T34-85. As US tank battalions hastily arrived throughout the late summer and early autumn of 1950, the M26 Pershing took the fight to North Korea with increasing success.

### **Panzer III- gGERMANY'S medium Tank ,**

**Panzer III** Michael Hayton, Dick Taylor, 2017-02-15 When Hitler unleashed Operation Barbarossa against the Soviet Union in June 1941, the 23-tonne Panzer III was in the vanguard of the German assault. The German Panzer III tank (official designation Panzerkampfwagen III, Sd Kfz 141, abbreviated to PzKpfw III) saw widespread use during the Second World War campaigns in Poland, France, the Soviet Union and the Balkans, and in North Africa with the famous Afrika Korps. A small number were still in use in Normandy (1944), at Anzio (1943), in Norway and Finland and in Operation Market Garden (1944). Some 5,774 were built between 1937 and 1943. Although the Panzer III was conceived to operate alongside the infantry-supporting Panzer IV to fight other tanks and armoured fighting vehicles, the roles were reversed when the German Army came up against the formidable Soviet T-34 tank. A tank with a more powerful anti-tank gun was needed so the Panzer IV with its larger turret ring and long-barrelled 7.5cm KwK 40 gun was used in tank-versus-tank battles, with the Panzer III being redeployed in the infantry support role. Production of the Panzer III ended in 1943, although its dependable chassis provided hulls for the Sturmgeschütz III (StuG III) assault gun, one of the most successful of the war, until the end of the war. Manual is the Bovington Tank Museum's PzKpfw III Ausf L, which has been restored to running condition. This tank belonged to the same battalion as the museum's famous Tiger I (the 501st (Heavy) Panzer Abteilung) and is an early production Ausf L, modified for tropical service. It was shipped via Naples to Benghazi in Libya in July 1942 and was issued to the 8th Panzer Regiment, part of the 15th Panzer Division and probably fought in the Battle of Alam Halfa. It was subsequently captured by the British Army and shipped to the UK. The Tank Museum has restored the tank to running order, has repainted it in its original camouflage and markings and is currently replacing many of the ancillary tools and equipment that it carried.

**Panther vs Sherman** Steven J. Zaloga, 2011-03-15 In this book Steven J Zaloga offers a fascinating comparison between the two most important tanks involved in the crucial fighting of 1944, the American Sherman and the German Panther. Placing the reader in the heart of this battle between quality and quantity Zaloga uses a compelling account of the ferocious fighting during the Battle of the Bulge to explain the successes and failures of each tank, highlighting the fact that a tank can only be as good as its crew, weighing up the impact of low morale, high cost and mediocre crew training on the Panther's superiority. With full-colour battlescenes, technical drawings, photographs, digital gunsight views, extracts from crew training manuals and real combat reports, this book brings the titanic battles between the Panther and Sherman to life.

Berkley James Jeffrey Tong, Susan Richardson, Steve Baker, 2013 Once a forbidding area of swamps and forests, Berkley was uninhabited until the early 19th century. In 1924, the Detroit News disparaged the frontier community and wrote that it resembles a settlement in the oil waste of Wyoming. Still, forward-thinking residents thought Berkley had a bright future. Two factions with competing ideas raced with paperwork to the Oakland County Courthouse in Pontiac; the triumphant group, desiring a small town, camped out overnight to be the first in line. Later incorporated as a city in 1932, Berkley's history includes the invention of the Benjamin Grain Cradle, the Ku Klux Klan parading through its streets, and the devastation of the fledgling community during the Great Depression. Through it all, Berkley continues to thrive and prides itself on being the City That Cares.

Sewing Success? Gladys Lopez-Acevedo, Raymond Robertson, 2012-03-14 The end of the MFA was followed by rising apparel exports, falling prices, and a reallocation of production and employment between countries. There were also significant changes within countries. The first main finding of this report is that export and employment patterns after the MFA/ATC did not necessarily match predictions. While many predicted that production would shift to low-wage countries, this book shows that only 13 percent of variation in export changes post-MFA can be explained by the differences in wage levels. Second, changes in exports are usually, but not always, good indicators of what happens to wages and employment within countries. This is especially important for policy because it shows that simply using exports as a metric of 'success' in terms of helping the poor is not sufficient. Third, the Book identifies the specific ways that changes in the global apparel market affected earnings. The Book shows that wage premiums change in predictable ways: rising (in most cases) in countries that were proactive in adapting to the MFA phase-out and expanded their market shares, and falling in countries that failed to respond in a timely fashion to the changing environment. The Book shows that promoting 'upgrading' (defined as shifting to higher-value goods, shifting up the value chain, or 'modernizing' production techniques) seems to be necessary for sustainable competitiveness in the apparel sector but does not necessarily help the poor. Policies that support upgrading need to be complemented with targeted workforce development to make sure that the most vulnerable workers are not left behind. Having a vision for the evolution of the apparel sector that incorporates developing worker skills seems crucial. Otherwise, less-skilled workers could miss out on opportunities

to gain valuable work experience in manufacturing.

**Stirling Engine Design Manual** William Martini, 2013-01-25 For Stirling engines to enjoy widespread application and acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available. The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. This report was originally prepared for the National Aeronautics and Space Administration and the U. S. Department of Energy.

Gas Pipeline Hydraulics Shashi Menon, Pramila Menon, 2013 This book is concerned with the steady state hydraulics of natural gas and other compressible fluids being transported through pipelines. Our main approach is to determine the flow rate possible and compressor station horsepower required within the limitations of pipe strength, based on the pipe materials and grade. It addresses the scenarios where one or more compressors may be required depending on the gas flow rate and if discharge cooling is needed to limit the gas temperatures. The book is the result of over 38 years of the authors' experience on pipelines in North and South America while working for major energy companies such as ARCO, El Paso Energy, etc.
