Cloud Computing Brian J.S. Chee, Curtis Franklin Jr., 2010-04-07 Modern computing is no longer about devices but is all about providing services, a natural progression that both consumers and enterprises are eager to embrace. As it can deliver those services, efficiently and with quality, at compelling price levels, cloud computing is with us to stay. Ubiquitously and quite definitively, cloud computing is

Papertoy Monsters Brian Castleforte, 2010-12-29 A breakthrough paper-folding book for kids—paper airplanes meet Origami meets Pokemon. Papertoys, the Internet phenomenon that's hot among graphic designers and illustrators around the world, now comes to kids in the coolest new book. Created and curated by Brian Castleforte, a graphic designer and papertoy pioneer who rounded up 25 of the hottest papertoy designers from around the world (Indonesia, Japan, Australia, Italy, Croatia, Chile, even Jackson, Tennessee), Papertoy Monsters offers 50 fiendishly original die-cut designs that are ready to pop out, fold, and glue. The book interleaves card stock with paper stock for a unique craft package; the graphics are colorful and hip, combining the edginess of anime with the goofy fun of Uglydolls and other collectibles. Plus each character comes with its own back-story. And the results are delicious: meet Pharaoh Thoth Amon, who once ruled Egypt but is now a mummy who practices dark magic in his sarcophagus. Or Zumbie the Zombie, who loves nothing more than a nice plate of brains and yams. NotSoScary, a little monster so useless at frightening people that he has to wear a scary mask. Yucky Chuck, the lunchbox creature born in the deepest depths of your school bag. Plus Zeke, the monster under your bed, Nom Nom, eater of cities, and Grumpy Gramps, the hairy grandpa monster with his very own moustache collection.

ECODESIGN -- The Competitive Advantage Wolfgang Wimmer, Kun Mo LEE, John Polak, Ferdinand Quella, 2010-09-11 Dealing with environmental issues should no longer be considered simply as a cost of doing business. Effective environmental improvements to a company's products and services can be turned into business opportunities. This book was written with the express purpose of helping managers of companies, in particular of Small to Medium sized Enterprises (SMEs), to better deal with environmental challenges and address customer requirements, all in order to turn their environmental investments into competitive market advantages. Several examples are provided throughout the book, but also warning signs (Alert Boxes). These "Alerts" are posted to help managers avoid typical traps when working with environmental considerations in business processes. The authors have many years of experience in the various aspects of implementing Ecodesign. This experience includes working in industry for many years; leading the environmental departments in a multinational company; managing research projects in eco-product development; Life Cycle Assessment; and national and international environmental communication and marketing. This book is the latest in a series. The 2002 "Ecodesign Pilot" introduced a tool and software to help design more environmentally compatible products. It was directed specifically at designers. The 2004 book, "Ecodesign Implementation", was written to help project managers optimize product development processes from an environmental perspective.

Emerging Solutions for Future Manufacturing Systems Luis M. Camarinha-

Matos,2004-09-13 Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio-economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio-economic environment. In order to respond to these challenges companies are forced to seek new technological and organizational solutions. In this context two main characteristics emerge as key properties of a modern automation system – agility and distribution. Agility because systems need not only to be flexible in order to adjust to a number of a-priori defined scenarios, but rather must cope with unpredictability. Distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks. Emerging Solutions for Future Manufacturing Systems includes the papers selected for the BASYS'04 conference, which was held in Vienna, Austria in September 2004 and sponsored by the International Federation for Information Processing (IFIP).

Comparative Arawakan Histories Jonathan D. Hill,Fernando Santos-Granero,2010-10-01 Before they were largely decimated and dispersed by the effects of European colonization, Arawak-speaking peoples were the most widespread language family in Latin America and the Caribbean, and they were the first people Columbus encountered in the Americas. *Comparative Arawakan Histories*, in paperback for the first time, examines social structures, political hierarchies, rituals, religious movements, gender relations, and linguistic variations through historical perspectives to document sociocultural diversity across the diffused Arawakan diaspora.

Cheap at Half the Price Jeffrey Archer,2017-05-02 In *Cheap at Half the Price*, by #1 New York Times bestselling author and master of the short story Jeffrey Archer, the conniving Consuela Rosenheim hunts down her ideal birthday present – and next husband – in London. Will she accomplish her biggest swindle yet, or will she finally get her just desserts? The wily woman is, as Archer opens, “naturally superior to men,” and a pure joy for Archer fans new and old.

Agent-Based Manufacturing S.M. Deen,2013-04-17 Low-volume high-variety products like personalized cars or customized engines will be the key issues for manufacturing in the 21st century. The necessary control technology is based on the concept of holons, which are the units of production and behave as autonomous and cooperative agents, providing flexibility, adaptability, agility, and dynamic reconfigurability. This book presents the latest research results in agent-based manufacturing as carried out by researchers in academia and industry within the international Holonic Manufacturing Systems project. As this project was driven by industry, the results presented here are of vital interest not just to researchers in agent technologies or distributed artificial intelligence, but also to engineers and professionals in industry who have to respond to rapid changes and new demands in production.

Green Industrial Policy in Emerging Countries Anna Pegels,2015-06-08 This book identifies the drivers and success factors of green industrial policy, which seeks to reconcile the synergies and trade-offs which exist between economic and environmental goals. It will be of interest to students, researchers and policymakers in the areas of energy policy, sustainable development, industrial economics and ecological economics.

Virtual Organizations Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Martin Ollus, 2006-06-18 The area of Virtual Organizations as a main component of the new discipline of Collaborative Networks has been the focus of research globally. The fast evolution of the information and communication technologies and in particular the so-called Internet technologies, also represents an important motivator for the emergence of new forms of collaboration. However, the research in many of these cases is highly fragmented, considering that each project is focused on solving specific problems. As such, there is no effective consolidation/harmonization among them in order to have an effective impact and facilitate the interaction among the involved experts. This book represents a contribution to the consolidation of the already vast amount of empirical knowledge and practical experience. A synthesis of results collected from the analysis of numerous projects and industry case studies is presented, with focus on: Principles and models, ICT infrastructures and tools, Implementation issues, and Case studies.

Multi-Agent-Systems and Applications II Vladimír Mařík, 2002 This book presents a collection of thoroughly refereed papers drawn together from three meetings on multi-agent systems. Five of the tutorial lectures included were presented at the ACAI/EASSS 2001 summer school on MAS, held in Prague, Czech Republic, in July 2001; seven revised reviewed student papers dealing with various aspects of MAS are included as well. A workshop on Adaptability and Embodiment using MAS, AEMAS 2001, also held in Prague, Czech Republic, concurrently with the ACAI/EASSS summer school, is represented by three papers. Finally, a further nine papers were selected from an International Workshop on Industrial Applications of Holonic and Multi-Agent Systems, HoloMAS 2001, held in Munich, Germany, in September 2001.

Balanced Automation Systems Luis M. Camarinha-Matos, Hamideh Afsarmanesh, 2014-01-15

Programming Industrial Control Systems Using IEC 1131-3 Robert W. Lewis, 1998 This revised edition includes all IEC proposed amendments and corrections for the planned 1999 revision of IEC 1131-3, as agreed by the IEC working group. It accurately describes the languages and concepts, and interprets the standard for practical implementation and applications.

Understanding Agent Systems Mark d'Inverno, Michael Luck, 2013-12-20 Mark d'Inverno and Michael Luck present a formal approach to dealing with agents and agent systems in this second edition of Understanding Agent Systems. The Z specification language is used to establish an accessible and unified formal account of agent systems and inter-agent relationships. In particular, the framework provides precise and unambiguous meanings for common concepts and terms for agent systems, allows for the description of alternative agent models and architectures, and serves as a foundation for subsequent development of increasingly refined agent concepts. The practicability of this approach is verified by applying the formal framework to three detailed case studies. The book will appeal equally to researchers, students, and professionals in industry.

Networked RFID George Roussos, 2008-10-17 This book introduces the technologies and techniques of large-scale RFID-enabled mobile computing systems. The discussion is set in the context of specific system case studies where RFID has been the core enabling technology in retail, metropolitan transportation, logistics and e-passport applications. RFID technology

fundamentals are covered including operating principles, core system components and performance trade-offs involved in the selection of specific RFID platforms.

Ethnicity in Ancient Amazonia Alf Hornborg,Jonathan D. Hill,2011-10-01 A major contribution to Amazonian anthropology, and possibly a direction changer. -J. Scott Raymond,University of Calgary A transdisciplinary collaboration among ethnologists, linguists, and archaeologists, *Ethnicity in Ancient Amazonia* traces the emergence, expansion, and decline of cultural identities in indigenous Amazonia. Hornborg and Hill argue that the tendency to link language, culture, and biology--essentialist notions of ethnic identities--is a Eurocentric bias that has characterized largely inaccurate explanations of the distribution of ethnic groups and languages in Amazonia. The evidence, however, suggests a much more fluid relationship among geography, language use, ethnic identity, and genetics. In *Ethnicity in Ancient Amazonia*, leading linguists, ethnographers, ethnohistorians, and archaeologists interpret their research from a unique nonessentialist perspective to form a more accurate picture of the ethnolinguistic diversity in this area. Revealing how ethnic identity construction is constantly in flux, contributors show how such processes can be traced through different ethnic markers such as pottery styles and languages. Scholars and students studying lowland South America will be especially interested, as will anthropologists intrigued by its cutting-edge, interdisciplinary approach.
