Universal Decay: Dead Stars Rule Book, Revised, 2nd Edition Jay

Barrell,2013-11-18 Dead Stars is a science fiction horror role-playing game powered by the alternate d20 Universal Decay rules system. Pick a race - from the ever-familiar humans to the amorphous gorbrasch or sleazy helizara - strap on some personal armor and pick up a sliver rifle or get a cerebral computer implant and grab your toolkit. Or both. Then get together with your friends to face a universe of dangers, wonders, opportunities, and quite possibly a messy death. This book contains everything you will need to play or run a game in Dead Stars as well as rules for using the Universal Decay system in alternate genres, incorporating everything from swords and sorcery to vehicle energy weapons, personal armor, nanotechnology and starships.

The 91 papers presented in the two volumes were organized in topical sections named: Visual information; Data visualization and analytics; Information, cognition and learning; Information, empathy and persuasion; Knowledge management and sharing; Haptic

and tactile interaction; Information in virtual and augmented reality; Machine learning and intelligent systems; Human motion and expression recognition and tracking; Medicine, healthcare and quality of life applications.

The Craft of Scientific Films Lauren Murphy, Michael Alley, 2023-08-31 This book, the first of its kind, helps scientists and engineers of all stages and disciplines share their work in a new way—with movies. Today, much of scientific communication is embedded in papers and presentations, but these documents don't often extend outside of a specific academic field. By adding movies as a medium of communication, scientists and engineers can better communicate with their colleagues while also increasing their reach to students, professors, peers, potential collaborators, and the public. Scientific films help translate complex technical topics into more accessible and consumable messages. By following Lauren Murphy's filmmaking formula – planning, shooting, and editing – readers will create their very own scientific films that look professional and polished. Using tools as simple as a smartphone, readers can develop short, personal stories with no cost or experience needed. This book will guide readers through all steps of the movie making process to a finished product. Readers will evolve their creative thinking skills and use their movies to improve classroom presentations, network across student organizations, present at conferences, recruit students for their labs, secure grant money, and more. Adding a movie to your body of work can be the tool that sparks interest in audiences to learn more—driving traffic to your publications, research projects, and websites. This book will help you develop new skills to become a better communicator while spreading your ideas and research to new audiences.

Data, Matter, Design Frank Melendez, Nancy Diniz, Marcella Del Signore, 2020-09-29 Data, Matter, Design presents a comprehensive overview of current design processes that rely on the input of data and use of computational design strategies, and their relationship to an array of outputs. Technological changes, through the use of computational tools and processes, have radically altered and influenced our relationship to cities and the methods by which we design architecture, urban, and landscape systems. This book presents a wide range of curated projects and contributed texts by leading architects, urbanists, and designers that transform data as an abstraction, into spatial, experiential, and performative configurations within urban ecologies, emerging materials, robotic agents, adaptive fields, and virtual constructs. Richly illustrated with over 200 images, Data, Matter, Design is an essential read for students, academics, and professionals to evaluate and discuss how data in design methodologies and theoretical discourses have evolved in the last two decades and why processes of data collection, measurement, quantification, simulation, algorithmic control, and their integration into methods of reading and producing spatial

conditions, are becoming vital in academic and industry practices.

Impact: Design With All Senses Christoph Gengnagel, Olivier Baverel, Jane Burry, Mette Ramsgaard Thomsen, Stefan Weinzierl, 2019-08-28 This book reflects and expands on the current trend in the building industry to understand, simulate and ultimately design buildings by taking into consideration the interlinked elements and forces that act on them. Shifting away from the traditional focus, which was exclusively on building tasks, this approach presents new challenges in all areas of the industry, from material and structural to the urban scale. The book presents contributions including research papers and case studies, providing a comprehensive overview of the field as well as perspectives from related disciplines, such as computer science. The chapter authors were invited speakers at the 7th Symposium "Impact: Design With All Senses", which took place at the University of the Arts in Berlin in September 2019.

This Book Is a Camera Kelli Anderson, 2015-11-20 This is a working camera that pops up from the pages of a book..The book concisely explains--and actively demonstrates--how a structure as humble as a folded piece of paper can tap into the intrinsic properties of light to produce a photograph.The book includes:- a piece of paper folded into a working 4x5 camera- a lightproof bag- 5 sheets of photo-paper film- development instructions (from complete DIY to outsource it)- a foil-stamped cover- a satisfying demonstration of the connection between design & science / structures & functions

Recycled Robots Robert Malone, 2012-01-01 Provides instructions for making robots from materials around the home.

Fabricate 2020 Jane Burry, Jenny E. Sabin, Bob Sheil, Marilena Skavara, 2020-04-06 Fabricate 2020 is the fourth title in the FABRICATE series on the theme of digital fabrication and published in conjunction with a triennial conference (London, April 2020). The book features cutting-edge built projects and work-in-progress from both academia and practice. It brings together pioneers in design and making from across the fields of architecture, construction, engineering, manufacturing, materials technology and computation. Fabricate 2020 includes 32 illustrated articles punctuated by four conversations between world-leading experts from design to engineering, discussing themes such as drawing-to-production, behavioural composites, robotic assembly, and digital craft.

Morphogenetic Engineering René Doursat, Hiroki Sayama, Olivier Michel, 2012-12-13 Generally, spontaneous pattern formation phenomena are random and repetitive, whereas elaborate devices are the deterministic product of human design. Yet, biological organisms and collective insect constructions are exceptional examples of complex systems that are both self-organized and architectural. This book is the first initiative of its kind toward establishing a new field of research, Morphogenetic Engineering, to explore the modeling and implementation of "self-architecturing" systems. Particular emphasis is placed on the programmability and computational abilities of self-organization, properties that are often underappreciated in complex systems science—while, conversely, the benefits of self-organization

are often underappreciated in engineering methodologies. Altogether, the aim of this work is to provide a framework for and examples of a larger class of “self-architecturing” systems, while addressing fundamental questions such as
br” How do biological organisms carry out morphogenetic tasks so reliably?
br” Can we extrapolate their self-formation capabilities to engineered systems?
br” Can physical systems be endowed with information (or informational systems be embedded in physics) so as to create autonomous morphologies and functions?
br” What are the core principles and best practices for the design and engineering of such morphogenetic systems?

Knowledge Cartography Alexandra Okada, Simon J. Buckingham Shum, Tony Sherborne, 2014-10-07 Focuses on the process by which manually crafting interactive, hypertextual maps clarifies one’s own understanding, communicates it to others, and enables collective intelligence. The authors see mapping software as visual tools for reading and writing in a networked age. In an information ocean, the challenge is to find meaningful patterns around which we can weave plausible narratives. Maps of concepts, discussions and arguments make the connections between ideas tangible - and critically, disputable. With 22 chapters from leading researchers and practitioners (5 of them new for this edition), the reader will find the current state-of-the-art in the field. Part 1 focuses on knowledge maps for learning and teaching in schools and universities, before Part 2 turns to knowledge maps for information analysis and knowledge management in professional communities, but with many cross-cutting themes: · reflective practitioners documenting the most effective ways to map · conceptual frameworks for evaluating representations · real world case studies showing added value for professionals · more experimental case studies from research and education · visual languages, many of which work on both paper and with software · knowledge cartography software, much of it freely available and open source · visit the companion website for extra resources:

books.kmi.open.ac.uk/knowledge-cartography Knowledge Cartography will be of interest to learners, educators, and researchers in all disciplines, as well as policy analysts, scenario planners, knowledge managers and team facilitators. Practitioners will find new perspectives and tools to expand their repertoire, while researchers will find rich enough conceptual grounding for further scholarship.

Facts vs. Opinions vs. Robots Michael Rex, 2020-02-11 A hilarious, timely conversation about the differences between facts and opinions, by the creator of the #1 New York Times bestseller *Goodnight Goon* Do you know the difference between a fact and an opinion? It can be a hard thing to understand. Some things are facts--like the number of robots in this book. Other things are opinions--like which robot would make the best friend, or which robot dances best. And sometimes to tell the difference between a fact and an opinion, you need to wait to get more information--that's because facts can be proven true or false, and opinions are things you feel and believe--but that you can't prove. Mike Rex introduces young readers to the very important distinction between facts and opinions, and he reminds us that it is nice to listen to one another's opinions, and to stand up for the facts!
