Name and Actuality in Early Chinese Thought John Makeham,1994-01-01 This is the first Western study of the philosophy of Xu Gan (170-217), a Confucian thinker who lived at a nodal point in the history of Chinese thought, when Han scholasticism had become ossified and the creative and independent quality that characterized Wei-Jin thought was just emerging. As the theme of his study, Makeham develops an original and richly detailed account of ming shi, 'name and actuality,' one of the key pairs of concepts in early Chinese thought. He shows how Xu Gan's understanding of the 'name and actuality' relationship was most immediately influenced by Xu Gan's understanding of why the Han dynasty had collapsed, yet had its roots in a tradition of discourse that spanned the classical period (circa 500-150 B.C.E.). In reconstructing the philosophical background of Xu Gan's understanding of the relationship between 'name and actuality,' Makeham identifies two antithetical theories of naming in early Chinese thought--nominalist and correlative--a distinction that is as great as the Realist-Nominalist distinction of Western thought. He shows how Xu Gan's views on the name and actuality relationship were animated, on the one hand, by a rejection of nominalist theories of naming, and on the other hand, by a novel appropriation of correlative theories of naming. The study also analyzes two of the more immediate social and intellectual issues in the late Eastern Han (25-220) period that had prompted Xu Gan to discuss the name and actuality relationship: the ethos of the scholar-gentry (ming jiao) and Han approaches to classical scholarship. Makeham demonstrates how Xu Gan's critique of these matters is valuable not only as a late Han philosophical account of what had led to the demise of the 400-year-old Han dynasty, but also as a mode of conceptualizing that contributed to the new direction that philosophical thinking took in the third century C.E..

Rice fortification in Bangladesh: Technical feasibility and regulatory requirement for introducing rice fortification in public modern storage/distribution of fortified rice through PFDS channels Andrade, Juan E.,Ali, Abu Noman Mohammad Atahar,Chowdhury, Reajul,Crost, Benjamin,Hoffmann, Vivian,Mustafa, Shoumi,Shaima, Nabila Afrin,2021-09-01 Micronutrients, often referred to as vitamins and minerals are vital to healthy development, disease prevention, and wellbeing. Although only required in small amounts, micronutrients are not produced in the body and must be derived from the diet. Commonly cited micronutrients include Iron, Vitamins A, B, D, Iodine, and Zinc. Malnutrition in micronutrients tends to trap populations in a vicious cycle of poverty, causing adults to be less productive and preventing children from reaching their full potential, and exacerbating household poverty in general. Addressing the problem of micronutrient malnutrition, therefore, provides substantial benefits to the cause of development (Ara et al. 2019). The fortification of staple food items including rice to deliver vital micronutrients offers a unique opportunity to target the vulnerable populace – mostly women, young children and female adolescents – at a low cost, and importantly, without forcing a change in dietary habits.² Although considerable investments are currently being made to improve micronutrient nutrition outcomes around the world, such efforts generally take time to provide results.

Constructing Bangladesh Sufia M. Uddin,2006-12-15 Highlighting the dynamic, pluralistic nature of Islamic civilization, Sufia M. Uddin examines the

complex history of Islamic state formation in Bangladesh, formerly the eastern part of the Indian province of Bengal. Uddin focuses on significant moments in the region's history from medieval to modern times, examining the interplay of language, popular and scholarly religious literature, and the colonial experience as they contributed to the creation of a unique Bengali-Islamic identity. During the precolonial era, Bengali, the dominant regional language, infused the richly diverse traditions of the region, including Hinduism, Buddhism, and, eventually, the Islamic religion and literature brought by Urdu-speaking Muslim conquerors from North India. Islam was not simply imported into the region by the ruling elite, Uddin explains, but was incorporated into local tradition over hundreds of years of interactions between Bengalis and non-Bengali Muslims. Constantly contested and negotiated, the Bengali vision of Islamic orthodoxy and community was reflected in both language and politics, which ultimately produced a specifically Bengali-Muslim culture. Uddin argues that this process in Bangladesh is representative of what happens elsewhere in the Muslim world and is therefore an instructive example of the complex and fluid relations between local heritage and the greater Islamic global community, or umma.
