Pandemic Exposures Fassin Didier, Marion Fourcade, 2021-11 An illuminating, indispensable analysis of a watershed moment and its possible aftermath. For people and governments around the world, the onset of the COVID-19 pandemic seemed to place the preservation of human life at odds with the pursuit of economic and social life. Yet this naive alternative belies the complexity of the entanglements the crisis has created and revealed not just between health and wealth but also around morality, knowledge, governance, culture, and everyday subsistence. Didier Fassin and Marion Fourcade have assembled an eminent team of scholars from across the social sciences to reflect on the myriad ways SARS-CoV-2 has entered, reshaped, or exacerbated existing trends and structures in every part of the globe. The contributors show how the disruptions caused by the pandemic have both hastened the rise of new social divisions and hardened old inequalities and dilemmas. An indispensable volume, *Pandemic Exposures* provides an illuminating analysis of this watershed moment and its possible aftermath.

A People's History of Riots, Protest and the Law Matt Clement, 2016-06-21 This book examines how movements from below pose challenges to the status quo. The 2010s have seen an explosion of protest movements, sometimes characterised as riots by governments and the media. But these are not new phenomena, rather reflecting thousands of years of conflict between different social classes. Beginning with struggles for democracy and control of the state in Athens and ancient Rome, this book traces the common threads of resistance through the Middle Ages in Europe and into the modern age. As classes change so does the composition of the protestors and the goals of their movements; the one common factor being how groups can mobilise to resist unbearable oppression, thereby developing a crowd consciousness that widens their political horizons and demonstrates the possibility of overthrowing the existing order. To appreciate the roots and motivations of these so-called deviants the author argues that we need to listen to the sound of the crowd. This book will be of interest to researchers of social movements, protests and riots across sociology, history and international relations.

Gabbard's Treatments of Psychiatric Disorders Glen O. Gabbard, 2014-05-05 The definitive treatment textbook in psychiatry, this fifth edition of *Gabbard's Treatments of Psychiatric Disorders* has been thoroughly restructured to reflect the new DSM-5® categories, preserving its value as a state-of-the-art resource and increasing its utility in the field. The editors have produced a volume that is both comprehensive and concise, meeting the needs of clinicians who prefer a single, user-friendly volume. In the service of brevity, the book focuses on treatment over diagnostic considerations, and addresses both empirically-validated treatments and accumulated clinical wisdom where research is lacking. Noteworthy features include the following: Content is organized according to DSM-5® categories to make for rapid retrieval of relevant treatment information for the busy clinician. Outcome studies and expert opinion are presented in an accessible way to help the clinician know what treatment to use for which disorder, and how to tailor the treatment to the patient. Content is restricted to the major psychiatric conditions seen in clinical practice while leaving out less common conditions and those that have limited outcome research related to the disorder, resulting in a more streamlined and affordable text. Chapters are meticulously referenced and include dozens of tables, figures, and other illustrative features that enhance comprehension and recall. An authoritative resource for psychiatrists, psychologists, and psychiatric nurses, and an outstanding reference for students in the mental health professions, *Gabbard's Treatments of Psychiatric Disorders, Fifth Edition*, will prove indispensable to clinicians seeking to provide excellent care while transitioning to a DSM-5® world.

Seventeen Contradictions and the End of Capitalism David Harvey, 2014 David Harvey examines the internal contradictions within the flow of capital that have precipitated recent crises. While the contradictions have made capitalism flexible and resilient, they also contain the seeds of systemic catastrophe--

Physics of the Impossible Michio Kaku, 2008-03-11 NATIONAL BESTSELLER • Inspired by the fantastic worlds of *Star Trek*, *Star Wars*, and *Back to the Future*, the renowned theoretical physicist and national bestselling author of *The God Equation* takes an informed, serious, and often surprising look at what our current understanding of the universe's physical laws may permit in the near and distant future. Teleportation, time machines, force fields, and interstellar space ships—the stuff of science fiction or potentially attainable future technologies? Entertaining, informative, and imaginative, *Physics of the Impossible* probes the very limits of human ingenuity and scientific possibility.

Water Societies and Technologies from the Past and Present Mark Altaweel, Yijie Zhuang, 2018-11-26 Today our societies face great challenges with water, in terms of both quantity and quality, but many of these challenges have already existed in the past. Focusing on Asia, *Water Societies and Technologies from the Past and Present* seeks to highlight the issues that emerge or re-emerge across different societies and periods, and asks what they can tell us about water sustainability. Incorporating cutting-edge research and pioneering field surveys on past and present water management practices, the interdisciplinary contributors together identify how societies managed water resource challenges and utilised water in ways that allowed them to evolve, persist, or drastically alter their environment. The case studies, from different periods, ancient and modern, and from different regions, including Egypt, Sri Lanka, Cambodia, Southwest United States, the Indus Basin, the Yangtze River, the Mesopotamian floodplain, the early Islamic city of Sultan Kala in Turkmenistan, and ancient Korea, offer crucial empirical data to readers interested in comparing the dynamics of water management practices across time and space, and to those who wish to understand water-related issues through conceptual and quantitative models of water use. The case studies also challenge classical theories on water management and social evolution, examine and establish the deep historical roots and ecological foundations of water sustainability issues, and contribute new grounds for innovations in sustainable urban planning and ecological resilience.

Health Risks from Exposure to Low Levels of Ionizing Radiation Committee to Assess Health Risks from Exposure to Low Levels of Ionizing Radiation, National Research Council, 2006-03-23 This book is the seventh in a series of titles from the National Research Council that addresses the effects of exposure to low dose LET (Linear Energy Transfer) ionizing radiation and human health. Updating information previously presented in the 1990 publication, *Health Effects of Exposure to Low Levels of Ionizing Radiation: BEIR V*, this book draws upon new data in both epidemiologic and experimental research. Ionizing radiation arises from both natural and man-made sources and at very high doses can produce damaging effects in human tissue that can be evident within days after exposure. However, it is the low-dose exposures that are the focus of this book. So-called “late” effects, such as cancer, are produced many years after the initial exposure. This book is among the first of its kind to include detailed risk estimates for cancer incidence in addition to cancer mortality. BEIR VII offers a full review of the available biological, biophysical, and epidemiological literature since the last BEIR report on the subject and develops the most up-to-date and comprehensive risk estimates for cancer and other health effects from exposure to low-level ionizing radiation.

Ecohydraulics Ian Maddock, Atle Harby, Paul Kemp, Paul J. Wood, 2013-07-01 *Ecohydraulics: An Integrated Approach* provides a research level text which highlights recent developments of this emerging and expanding field. With a focus on interdisciplinary research the text examines:- the evolution and scope of ecohydraulics interactions between hydraulics, hydrology, fluvial geomorphology and aquatic ecology the application of habitat modelling in ecohydraulic studies state of the art methodological developments and approaches detailed case studies including fish passage design and the management of environmental flow regimes research needs and the future of ecohydraulics research The contributions offer broad geographic coverage to encapsulate the wide range of approaches, case studies and methods used to conduct ecohydraulics research. The book considers a range of spatial and temporal

scales of relevance and aquatic organisms ranging from algae and macrophytes to macroinvertebrates and fish. River management and restoration are also considered in detail, making this volume of direct relevance to those concerned with cutting edge research and its application for water resource management. Aimed at academics and postgraduate researchers in departments of physical geography, earth sciences, environmental science, environmental management, civil engineering, biology, zoology, botany and ecology; Ecohydraulics: An Integrated Approach will be of direct relevance to academics, researchers and professionals working in environmental research organisations, national agencies and consultancies.

Cosmetic Dermatology Cheryl M. Burgess, 2005-02-16 This book provides the dermatologist with the essential information needed to properly treat all skin types cosmetically. All chapters have been written by female dermatologists with many years of personal experience in the field. The volume includes an overview of the systemic, intrinsic and extrinsic aging process, essential information on anti-aging skin care product ingredients, detailed discussions of patient selection and indications, and a wide range of cosmetic procedures. This concise book allows you - through its well-organized use of sidebars, photographs and illustrations - to extract any information you may need quickly and easily.

EPZ Thousand Plateaus Gilles Deleuze, Félix Guattari, 2004-09-01 'A rare and remarkable book.' Times Literary Supplement Gilles Deleuze (1925-1995) was Professor of Philosophy at the University of Paris VIII. He is a key figure in poststructuralism, and one of the most influential philosophers of the twentieth century. Félix Guattari (1930-1992) was a psychoanalyst at the la Borde Clinic, as well as being a major social theorist and radical activist. A Thousand Plateaus is part of Deleuze and Guattari's landmark philosophical project, Capitalism and Schizophrenia - a project that still sets the terms of contemporary philosophical debate. A Thousand Plateaus provides a compelling analysis of social phenomena and offers fresh alternatives for thinking about philosophy and culture. Its radical perspective provides a toolbox for 'nomadic thought' and has had a galvanizing influence on today's anti-capitalist movement. Translated by Brian Massumi>

Neutron Methods for Archaeology and Cultural Heritage Nikolay Kardjilov, Giulia Festa, 2016-12-15 This book provides an extensive overview of the application of neutron characterization techniques in cultural heritage to a broad audience and will be of interest to both scientists and non-scientists in the field. Archaeologists, paleontologists, restaurateurs and conservators, historians and collectors will be fascinated by the wealth of information that can be obtained using neutron techniques, while material scientists and engineers will find details of the experimental techniques and materials properties that can be determined. Neutrons, due to their weak interactions with materials, provide a penetrating, but non-invasive probe of bulk properties. They allow the characterization of the composition and mechanical properties of materials, helping to answer questions related to the dating, the manufacturing process or the state of degradation of artefacts. They allow detailed interrogation of the internal structures of objects that may be otherwise hidden from view. The first section of the book is dedicated to stories describing spectacular discoveries brought about by the use of neutron techniques in a range of applications. The second section covers the experimental techniques in appropriate detail: basic principles, limitations and fields of application.

Small Cities with Big Dreams Greg Richards, Lian Duif, 2018-07-20 How can small cities make an impact in a globalizing world dominated by 'world cities' and urban development strategies aimed at increasing agglomeration? This book addresses the challenges of smaller cities trying to put themselves on the map, attract resources and initiate development. Placemaking has become an important tool for driving urban development that is sensitive to the needs of communities. This volume examines the development of creative placemaking practices that can help to link small cities to external networks, stimulate collaboration and help them make the most of the opportunities presented by the knowledge economy. The authors argue that the adoption of more strategic, holistic placemaking strategies that engage all stakeholders can be a successful alternative to copying bigger places. Drawing on a range of examples from around the world, they analyse small city development strategies and identify key success factors. This book focuses on the case of 's-Hertogenbosch, a small Dutch city that used cultural programming to link itself to global networks and stimulate economic, cultural, social and creative development. It advocates the use of cultural programming strategies as a more flexible alternative to traditional top-down planning approaches and as a means of avoiding copying the big city. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

ECMO-Extracorporeal Life Support in Adults Fabio Sangalli, Nicolò Patroniti, Antonio Pesenti, 2014-04-30 Extracorporeal membrane oxygenation (ECMO) has been in clinical use for some 40 years, but it is only in the past decade that its application in the treatment of life-threatening circulatory and respiratory failure has truly flourished. This book presents a comprehensive overview of both pathophysiological and practical aspects of circulatory and respiratory extracorporeal support. The basics of ECMO, including its history, the "ECMO team", cannulation, materials, and blood-surface interactions, are first discussed. The various indications for and particular characteristics of circulatory and respiratory extracorporeal life support are then described in detail in the main part of the book. Patient care during ECMO and monitoring of the ECMO patient are also carefully covered, with explanation of the management of technical and clinical complications and transport-related problems. Further topics include long-term therapy options beyond ECMO, such as ventricular assist devices and transplants, outcome, the new frontiers of ECMO for organ procurement and future challenges. The authors are well-known experts in the field whose authoritative contributions and attention to practical aspects will be invaluable for novices and experienced practitioners alike.

Understanding Physics David C. Cassidy, Gerald Holton, F. James Rutherford, 2013-11-27 A thorough grounding in contemporary physics while placing the subject into its social and historical context. Based largely on the highly respected Project Physics Course developed by two of the authors, it also integrates the results of recent pedagogical research. The text thus teaches the basic phenomena in the physical world and the concepts developed to explain them; shows that science is a rational human endeavour with a long and continuing tradition, involving many different cultures and people; develops facility in critical thinking, reasoned argumentation, evaluation of evidence, mathematical modelling, and ethical values. The treatment emphasises not only what we know

but also how we know it, why we believe it, and what effects this knowledge has.

New Keywords Tony Bennett, Lawrence Grossberg, Meaghan Morris, 2013-05-29 Over 25 years ago, Raymond Williams' Keywords: A Vocabulary of Culture and Society set the standard for how we understand and use the language of culture and society. Introduction to Autonomous Robots Nikolaus Correll, 2016-04-25 This book introduces concepts in mobile, autonomous robotics to 3rd-4th year students in Computer Science or a related discipline. The book covers principles of robot motion, forward and inverse kinematics of robotic arms and simple wheeled platforms, perception, error propagation, localization and simultaneous localization and mapping. The cover picture shows a wind-up toy that is smart enough to not fall off a table just using intelligent mechanism design and illustrate the importance of the mechanism in designing intelligent, autonomous systems. This book is open source, open to contributions, and released under a creative common license.

Kafka Gilles Deleuze, 1986 In Kafka Deleuze and Guattari free their subject from his (mis)interpreters. In contrast to traditional readings that see in Kafka's work a case of Oedipalized neurosis or a flight into transcendence, guilt, and subjectivity, Deleuze and Guattari make a case for Kafka as a man of joy, a promoter of radical politics who resisted at every turn submission to frozen hierarchies.
