Exploring Culture Gert Jan Hofstede, Paul B. Pedersen, Geert Hofstede, 2002-09-24 A masterpiece in intercultural training! Exploring Culture brings Geert Hofstede's five dimensions of national culture to life. Gert Jan Hofstede and his co-authors Paul Pedersen and Geert Hofstede introduce synthetic cultures, the ten pure cultural types derived from the extremes of the five dimensions. The result is a playful book of practice that is firmly rooted in theory. Part light, part serious, but always thought-provoking, this unique book approaches training through the three-part process of building awareness, knowledge, and skills. It leads the reader through the first two components with more than 75 activities, dialogues, stories, and incidents. The Synthetic Culture Laboratory and two full simulations fulfill the skill-building component. Exploring Culture is suitable for students, trainers, coaches and educators. It can be used for individual study or as a text, and it serves as an excellent partner to Geert Hofstede's popular Cultures and Organizations.

The Foundations of Ethology K. Lorenz, 2013-04-17 This book is a contribution to the history of ethology-not a definitive history, but the personal view of a major figure in that story. It is all the more welcome because such a grand theme as ethology calls for a range of perspectives. One reason is the overarching scope of the subject. Two great questions about life that constitute much of biology are How does it work (structure and function)? and How did it get that way (evolution and ontogeny)? Ethology addresses the antecedent of it. Of what are we trying to explain the mechanism and

development? Surely behavior, in all its wealth of detail, variation, causation, and control, is the main achievement of animal evolution, the essential consequence of animal structure and function, the *raison d'être* of all the rest. Ethology thus spans between and overlaps with the ever-widening circles of ecology over the eons and the ever-narrowing focus of physiology of the neurons. Another reason why the history of ethology needs perspectives is the recency of its acceptance. For such an obviously major aspect of animal biology, it is curious how short a time-less than three decades-has seen the excitement of an active field and a substantial fraternity of workers, the addition of professors and courses to departments and curricula in biology (still far from universal}, and the normal complement of special journals, symposia, and sessions at congresses.

Ordnance Operations (FM 4-30) Headquarters Department Of The Army,2019-09-17 The purpose of the ordnance corps is to support the development, production, acquisition and sustainment of equipment- including weapons systems and munitions- and to provide explosive ordnance disposal (EOD), during peace and war, to provide superior combat power to the United States (U.S.) Army. The ordnance corps has a rich and robust history of supporting the force dating back from the American Revolution to present day. The future of our nation and Army will continue to be engaged in an era of persistent conflict a period of protracted confrontation among states, non-state, and individual actors increasingly willing to use violence to achieve their political and

ideological ends. The ordnance corps must evolve and remain the indispensable sustainment warfighting function in order for the Army to successfully execute simultaneous and protracted operations.

Materials Handbook John A. Vaccari, 2002-07-09 The Materials Handbook is an encyclopedic, A-to-Z organization of all types of materials, featuring their key performance properties, principal characteristics and applications in product design. Materials include ferrous and nonferrous metals, plastics, elastomers, ceramics, woods, composites, chemicals, minerals, textiles, fuels, foodstuffs and natural plant and animal substances --more than 13,000 in all. Properties are expressed in both U.S. customary and metric units and a thorough index eases finding details on each and every material. Introduced in 1929 and often known simply as Brady's, this comprehensive, one-volume, 1244 page encyclopedia of materials is intended for executives, managers, supervisors, engineers, and technicians, in engineering, manufacturing, marketing, purchasing and sales as well as educators and students. Of the dozens of families of materials updated in the 15th Edition, the most extensive additions pertain to adhesives, activated carbon, aluminides, aluminum alloys, catalysts, ceramics, composites, fullerenes, heat-transfer fluids, nanophase materials, nickel alloys, olefins, silicon nitride, stainless steels, thermoplastic elastomers, titanium alloys, tungsten alloys, valve alloys and welding and hard-facing alloys. Also widely updated are acrylics, brazing alloys, chelants, biodegradable plastics, molybdenum alloys, plastic alloys, recycle plastics, superalloys, supercritical fluids and tool steels. New classes of materials added include aliphatic polyketones, carburizing secondary-hardening steels and polyarylene ether benzimidazoles. Carcinogens and materials likely to be cancer-causing in humans are listed for the first time.

Carrion Ecology and Management Pedro P. Olea, Patricia Mateo-Tomás, José Antonio Sánchez-

Zapata,2019-07-22 Carrion, or dead animal matter, is an inherent component of aquatic and terrestrial ecosystems worldwide, and is exploited by a wide diversity of organisms from different trophic levels, including microbes, arthropods and vertebrates. Further, carrion consumption by scavengers, i.e. scavenging, supports key ecosystem functions and services such as recycling nutrients and energy, disposing of carcasses and regulating disease spread. Yet, unlike dead plant matter, dead animal decomposition has received little attention in the fields of ecology, wildlife conservation and environmental management, and as a result the management of carrion for maintaining biodiversity and functional ecosystems has been limited. This book addresses the main ecological patterns and processes relating to the generation and consumption of carrion both in terrestrial and aquatic ecosystems. It also discusses a number of conservation concerns and associated management issues, particularly regarding the increasing role of human-mediated carrion in ecosystems. Lastly, the book outlines future research lines in carrion ecology and management, and identifies the major challenges for scavengers and scavenging processes in the Anthropocene.

The Leatherback Turtle James R. Spotila, Pilar Santidrián Tomillo, 2015-10-30 The most comprehensive book ever written on leatherback sea turtles. Weighing as much as 2,000 pounds and reaching lengths of over seven feet, leatherback turtles are the world’s largest reptile. These unusual sea turtles have a thick, pliable shell that helps them to withstand great depths—they can swim more

than one thousand meters below the surface in search of food. And what food source sustains these goliaths? Their diet consists almost exclusively of jellyfish, a meal they crisscross the oceans to find. Leatherbacks have been declining in recent decades, and some predict they will be gone by the end of this century. Why? Because of two primary factors: human redevelopment of nesting beaches and commercial fishing. There are only twenty-nine index beaches in the world where these turtles nest, and there is immense pressure to develop most of them into homes or resorts. At the same time, longline and gill net fisheries continue to overwhelm waters frequented by leatherbacks. In *The Leatherback Turtle*, James R. Spotila and Pilar Santidrián Tomillo bring together the world's leading experts to produce a volume that reveals the biology of the leatherback while putting a spotlight on the conservation problems and solutions related to the species. The book leaves us with options: embark on the conservation strategy laid out within its pages and save one of nature's most splendid creations, or watch yet another magnificent species disappear.

Ancient Monuments of the Mississippi Valley Ephraim George Squier, Edwin Hamilton Davis, 1848

The Matrix of Visual Culture Patricia Pisters, 2003 This book explores Gilles Deleuze's contribution to film theory. According to Deleuze, we have come to live in a universe that could be described as metacinematic. His conception of images implies a new kind of camera consciousness, one that determines our perceptions and sense of selves: aspects of our subjectivities are formed in, for instance, action-images, affection-images and time-images. We live in a matrix of visual culture that is always moving and changing. Each image is always connected to an assemblage of affects and forces. This book presents a model, as well as many concrete examples, of how to work with Deleuze in film theory. It asks questions about the universe as metacinema, subjectivity, violence, feminism,

monstrosity, and music. Among the contemporary films it discusses within a Deleuzian framework are *Strange Days*, *Fight Club*, and *Dancer in the Dark*.
