*Image Encounters* Lisa Trever,2022-01-11 Moche murals of northern Peru

represent one of the great, yet still largely unknown, artistic traditions of the ancient Americas. Created in an era without written scripts, these murals are key to understandings of Moche history, society, and culture. In this first comprehensive study on the subject, Lisa Trever develops an interdisciplinary methodology of “archaeo art history” to examine how ancient histories of art can be written without texts, boldly inverting the typical relationship of art to archaeology. Trever argues that early coastal artistic traditions cannot be reduced uncritically to interpretations based in much later Inca histories of the Andean highlands. Instead, the author seeks the origins of Moche mural art, and its emphasis on figuration, in the deep past of the Pacific coast of South America. *Image Encounters* shows how formal transformations in Moche mural art, before and after the seventh century, were part of broader changes to the work that images were made to perform at Huacas de Moche, El Brujo, Pañamarca, and elsewhere in an increasingly complex social and political world. In doing so, this book reveals alternative evidentiary foundations for histories of art and visual experience.

The chapters also explore more nuanced topics in greater detail, showing how the research was conducted and how it can be used for further study. The authors range from academics working in renowned university departments to those from research institutions and practitioners in zoos. The volume encompasses a wide variety of species, ensuring the breadth of the field is explored.

*The Use of Dispersants in Marine Oil Spill Response* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Ocean Studies Board, Committee on the Evaluation of the Use of Chemical Dispersants in Oil Spill Response, 2020-04-24 Whether the result of an oil well blowout, vessel collision or grounding, leaking pipeline, or other incident at sea, each marine oil spill will present unique circumstances and challenges. The oil type and properties, location, time of year, duration of spill, water depth, environmental conditions, affected biomes, potential human community impact, and available resources may vary significantly. Also, each spill may be governed by policy guidelines, such as those set forth in the National Response Plan, Regional Response Plans, or Area Contingency Plans. To respond effectively to the specific conditions presented during an oil spill, spill responders have used a variety of response options—including mechanical recovery of oil using skimmers and booms, in situ burning of oil, monitored natural attenuation of oil, and dispersion of oil by chemical dispersants.

Because each response method has advantages and disadvantages, it is important to understand specific scenarios where a net benefit may be achieved by using a particular tool or combination of tools. This report builds on two previous National Research Council reports on dispersant use to provide a current understanding of the state of science and to inform future marine oil spill response operations. The response to the 2010 Deepwater Horizon spill included an unprecedented use of dispersants via both surface application and subsea injection. The magnitude of the spill stimulated interest and funding for research on oil spill response, and dispersant use in particular. This study assesses the effects and efficacy of dispersants as an oil spill response tool and evaluates trade-offs associated with dispersant use.

Analyzing Discourse Robert A. Dooley, Stephen H. Levinsohn, 2001 Analyzing Discourse is an introduction to discourse analysis for linguistic field workers. It is practical, addressing issues commonly confronted by field linguists. Rather than applying a rigid theory or surveying a variety of

approaches, it provides a methodology that has been refined over years of use. The material follows a functional and cognitive approach that seems to be a good approximation of how discourse is actually produced and understood. Since the aim of the manual is introductory rather than comprehensive, most chapters are relatively short, and the whole can be covered in fifteen classroom hours. References are provided for further reading on the topics discussed. The manual can be used individually or in group sessions, such as in a formal course or a linguistic seminar. In a group setting, concepts can be illustrated by examining further texts than those provided in the manual. Robert A. Dooley has a Ph.D. from Oklahoma State University. He has been involved in translation and the literacy team in the Brazilian Mbyá Guaraní language project. He also has served as Brazil SIL Linguistic Consultant and as Director of the Summer Institute of Linguistics, University of North Dakota Session, from 1988 to 1993.
