Make Animal Sculptures with Paper Mache Clay Jonni Good, 2010 If you've always wanted to create life-like animal sculptures, but you thought it would be too hard or too expensive, you're in for a very pleasant surprise. This book contains step-by-step instructions and over 250 photos to guide you through the enjoyable process of making realistic animal sculptures in a whole new way. Jonni Good's easy techniques help you create stunning wildlife art without the mess usually associated with papier mache - and the patterns included in each chapter guarantee that your sculptures will be perfectly shaped and proportioned from the very start. Paper mache clay takes about 5 minutes to make, using inexpensive ingredients. Applying the clay to your form is as easy as frosting a cake. It goes on smooth, and dries hard and strong. It's easy to form life-like details like eyes and noses, fur and scales. Then finish your sculptures with acrylic paints to bring them to life. Jonni even shows you how to create your own patterns from original drawings or photos, so you can use her techniques to sculpt any animal you like. Creating life-like animal sculptures has never been so easy, or so much fun!

**Studying Animal Languages Without Translation: An Insight from Ants** Zhanna Reznikova, 2016-12-14 The Author of this new volume on ant communication demonstrates that information theory is a valuable tool for studying the natural communication of animals. To do so, she pursues a fundamentally new approach to studying animal communication and "linguistic" capacities on the basis of measuring the rate of information transmission and the complexity of transmitted messages. Animals' communication systems and cognitive abilities have long-since been a topic of particular interest to biologists, psychologists, linguists, and many others, including researchers in the fields of robotics and artificial intelligence. The main difficulties in the analysis of animal language have to date been predominantly methodological in nature. Addressing this perennial problem, the elaborated experimental paradigm presented here has been applied to ants, and can be extended to other social species of animals that have the need to memorize and relay complex "messages". Accordingly, the method opens exciting new dimensions in the study of natural communications in the wild.

**The Origins of Self** Martin P. J. Edwardes, 2019-07-22 The Origins of Self explores the role that selfhood plays in defining human society, and each human individual in that society. It considers the genetic and cultural origins of self, the role that self plays in socialisation and language, and the types of self we generate in our individual journeys to and through adulthood. Edwardes argues that other awareness is a relatively early evolutionary development, present throughout the primate clade and perhaps beyond, but self-awareness is a product of the sharing of social models, something only humans appear to do. The self of which we are aware is not something innate within us, it is a model of our self produced as a response to the models of us offered to us by other people. Edwardes proposes that human construction of selfhood involves seven different types of self. All but one of them are internally generated models, and the only non-model, the actual self, is completely hidden from conscious awareness. We rely on others to tell us about our self, and even to let us know we are a self.

**Strange Animals I Have Known** Dr. Raymond L. Ditmars, 2017-07-11 To see the animals at the zoo on Sunday afternoon is one thing. To know them intimately, offstage, is quite another. In this book, which has delighted readers for two generations. Dr. Ditmars, who was curator of mammals and reptiles at New York's Bronx Zoo, gives an extraordinary account of his lively encounters with hundreds of animals. "For over a quarter of a century," writes Dr. Ditmars, "it has been my task to capture, transport, feed, nurse, soothe, fight, guard and cajole various specimens of the animal kingdom. I have been on intimate terms with snakes, bears, apes, monkeys, elephants, jaguars, tigers, buffaloes, giraffes, deer, kudus, hippos, wild horses, kiangs, rhinos, lions, cougars, leopards, kangaroos, beasts of almost every sort." While many of his adventures seem too fantastic to be true, they really did happen. "Rich in lore that will be fascinating to readers interested in natural history...Dr. Ditmar's sense of humor augments, in no small degree, the engaging qualities of his book."—New York Herald Tribune Books "Genuinely vivid and exciting adventures..."—N.Y. Times Book Review

**Observing Animal Behaviour** Marian Stamp Dawkins, 2007-10-18 This book introduces the reader to the power of observation before, and sometimes instead of, experimental manipulation in the study of animal behaviour. It starts with simple and easily accessible methods suitable for student projects, before going on to demonstrate the possibilities that now exist for far more sophisticated analyses of observational data. At a time when animal welfare considerations are attracting political as well as scientific debate, the potential for non-intrusive studies on animals is being increasingly recognized. Observation emerges as a valuable alternative approach, often yielding highly informative results in situations (such as on zoos, farms or for wild animals) where more invasive experimental techniques would be undesirable, unethical or just plain impossible. However, to justify its place alongside experimentation as a rigorous scientific method, observation needs to be just as disciplined and systematic and have just as much attention paid to project design in the way that observations are made and recorded. *Observing Animal Behaviour* takes the reader through all these stages: from the initial observations, to the formulation of hypotheses, and their subsequent testing with further systematic observations. Although designed principally as a companion text for advanced undergraduate and students taking courses in animal behaviour, this accessible text will be essential reading for anyone wanting to study animal behaviour using observational methods rather than experimentation, and assumes no previous knowledge of animals, statistics or scientific method. It will be of particular relevance and use to those professional researchers and consultants in the behavioural sciences who seek a compact but comprehensive introduction to the quantitative observation of animal behaviour.

**Mothers and Others** Sarah Blaffer Hrdy, 2011-04-15 *Mothers and Others* finds the key in the primatologically unique length of human childhood. Renowned anthropologist Sarah Hrdy argues that if human babies were to survive in a world of scarce resources, they would need to be cared for, not only by their mothers but also by siblings, aunts, fathers, friends—and, with any luck, grandmothers. Out of this complicated and contingent form of childrearing, Hrdy argues, came the human capacity for understanding others. In essence, mothers and others teach us who will care, and who will not.
