*Whirlybirds* Lieut.-Col. Ronald J. Brown,2018-04-03 On 25 June 1950, Communist North Korea unexpectedly invaded its southern neighbor, the American-backed Republic of Korea (ROK). The poorly equipped ROK Army was no match for the well prepared North Korean People's Army (NKPA) whose armored spearheads quickly thrust across the 38th Parallel. The stunned world helplessly looked on as the outnumbered and outgunned South Koreans were quickly routed. With the fall of the capital city of Seoul imminent, President Harry S. Truman ordered General of the Army Douglas MacArthur, C-in-C, Far East, in Tokyo, to immediately pull all American nationals in South Korea out of harm's way. On 27 July, an American combat air patrol protecting Kimpo Airfield near the South Korean capital actively engaged menacing North Korean planes and promptly downed three of the five Soviet-built Yak fighters. Soon thereafter American military forces operating under the auspices of the United Nations Command (UNC) were committed to thwart a Communist takeover of South Korea. Thus, only four years and nine months after V-J Day marked the end of WWII, the United States was once again involved in a shooting war in Asia.... The United Nations issued a worldwide call to arms to halt Communist aggression in Korea, and America's armed forces began to mobilize. Marines were quick to respond. Within three weeks a hastily formed provisional Marine brigade departed California and headed for the embattled Far East. Among the aviation units on board the U.S. Navy task force steaming west was a helicopter detachment, the first rotary-wing aviation unit specifically formed for combat operations in the history of the Marine Corps. Although few realized it at the time, this small band of dedicated men and their primitive flying machines were about to radically change the face of military aviation. Arguably, the actions of these helicopter pilots in Korea made U.S. Marines the progenitors of vertical envelopment operations, as we know them today.

The Vought F4U Corsair Martin W. Bowman,2019-12-27 This fully illustrated history of the iconic American fighter plane examines its development and combat experience through WWII and beyond. First flown in 1940, the Vought F4U Corsair was the fastest fighter in the world and the fastest US aircraft

of any description. Powered by a huge 18-cylinder Pratt and Whitney Double Wasp engine, the first Corsairs were capable of speeds up to 417 miles per hour. This figure would rise to nearly 450mph in later versions. The F4U entered service with the US Navy in September 1942 and over time was extensively used by the US Marines, Royal Navy and Royal New Zealand Air Force. Famous squadrons that flew these planes—like VMF-214 'The Black Sheep' and VF-17 'Jolly Rogers'—maintained their superiority over the Japanese for the rest of the war. After the Second World War the Corsair was used with distinction by the French in Indo-China and again by the US Navy in Korea. Since then, Corsairs have remained a favorite among warbird enthusiasts the world over. This comprehensive book examines the engineering of the Corsairs alongside a detailed history of their development and usage in combat. Illustrated with scores of rare and previously unpublished photographs, Vought F4U Corsair is the perfect book for any fan of the 'bent wing bird'.

Japan's Carnival War Benjamin Uchiyama, 2019-03-14 This cultural history of the Japanese home front during the Asia-Pacific War challenges ideas of the period as one of unrelenting repression. Uchiyama demonstrates that 'carnival war' coexisted with the demands of total war to promote consumerist desire alongside sacrifice and fantasy alongside nightmare, helping mobilize the war effort.

**Japanese Aero-Engines 1910-1945** Mike Goodwin, 2017 In this book the authors have endeavored to remedy the notable lack of comprehensive coverage. The development of all the many engines produced by Japanese aero-engine manufacturing companies from 1912 to 1945 is explored in detail, including a full explanation of the different systems used to identify them. Furthermore, the developments are related to the aircraft in which the various engines were used, including prototypes, flying test-beds, and changes in the make or type of engine during an aircraft's operational service. In other words aircraft evolution in Japan is viewed in snapshots as it happened from the aero-engine aspect and not from the complete aircraft aspect as is featured in most publications. Unfortunately this approach necessitates numerous cross-references in the text where several different engines are associated with a particular aircraft, for which the authors can only apologize. Lastly, to illustrate the industrial background, the origin and development of each of the aero-engine manufacturing companies is also outlined briefly

Flying Wings and Tailless Aircraft Bill Rose, 2010 This is an exciting new addition to the highly successful Secret Projects series, which examines some extraordinary flying wings and tailless aircraft projects. Designed and developed since the dawn of aviation, these aircraft still hold a great importance today, with many aviation enthusiasts eager to learn more about these remarkable aircraft, which provided the foundations for the modern aviation scene. Beginning with an analysis of the advantages of the flying wing, the author looks at why aerodynamicists have been attracted to this unique configuration since the earliest days of manned flight, highlighting a range of specific aircraft and relevant examples. Many aviation enthusiasts will delight in discovering the more intimate developmental details of familiar aircraft including the famous early glider Junkers and other World War 1 flying wing biplane designs.

To Command the Sky Stephen L. McFarland, Wesley Phillips Newton, 2006-03-06

This widely praised study draws from both American and German sources to show how the U.S. Army Air Forces cleared the way for the successful Allied invasion of France. In 1944 a revitalized American leadership abandoned the unsuccessful approach of strategic bombing and instead focused on air superiority, practically chasing the enemy out of the sky and eliminating Germany's supply of trained pilots. Examining the people, technologies, command decisions, and key events of the war over Germany, the authors prove conclusively that the winning of air superiority -- not the success of strategic bombing -- played a more essential part in the Allied victory in Europe

The Messerschmitt Me 163 Komet Marek Ryś, 2021-09-30 Although the German Me 163 Komet rocket fighter was created as a remedy for the mass air raids of the Allied air force on Germany, its origins date back to 1938. Alexander Lippisch then began work at the DFS factory on a tailless rocket-propelled aircraft, designated as DFS 194. At the beginnings of 1939, the project was handed over to the Messerschmitt factory and there it developed into the Me 163A. Two prototypes of this aircraft - V4 and V5 - were completed in 1941 and flown as gliders. Then the V4 received a Walter HWK R.II rocket engine with a thrust of 7.5 kN, and on October 2, 1941 H. Dittmar achieved a speed of 1003 km/h on mentioned plane. Thirteen Me 163As were built for training.

This comprehensive encyclopedia shares current understandings of the struggle to control the seas during that conflict--and it opens our eyes to the reasons sea power continues to be of critical importance today. Scholarly treatment of World War II is constantly changing as new materials inform new interpretations. The encyclopedia focuses on the events, individuals, organizations, and ideas that shaped the world's navies during World War II, as well as the resultant battles that changed naval history. It also covers the numerous innovations that occurred during the conflict and shows how strategies evolved and were executed.
