Armoured Cruiser Cressy Andrew Choong,2020-03-30 The complete set of builders' plans for the Royal Navy's Victorian era armored cruiser famously sunk during WWI. The builders of British warships created a highly detailed set of plans for each ship upon completion. These highly detailed, multicolored drawings represented the exact appearance and specifications of the ship as it entered service. Today, the National Maritime Museum and Seaforth Publishing are making these invaluable resources available to the public through a series of books featuring high-quality digital reproductions. This volume presents the plans for the armored cruiser HMS Cressy. Launched on December 4th, 1899, it best known for the disaster of September 22nd, 1914, in which Cressy and two sister-ships were sunk by a small submarine. Though obsolete by the First World War, Cressy-class cruisers were innovative ships in their day. In full color, with many close-ups and enlargements, these plans make every aspect of the HMS Cressy clear and comprehensible. Extensive captions point the reader to important features to be found in the plans, and an introduction covers the design's background.

The German Armoured Cruiser SMS Blücher Marsden Samuel,2018-11-19 The SMS Blücher was the last armored cruiser built by the German Empire. She was constructed to counter the new armored cruisers rumored as being built by the British. Blücher was larger than preceding armored cruisers and carried heavier guns but was unable to match the size and armament of the battlecruisers which replaced armored cruisers in the British Royal Navy and - later - the Imperial German Navy (Kaiserliche Marine). When the Germans learned of the true details of these new British ships, called Invincible class, and that they were to be armoured with 12 battleship guns, they realized that the Invincible class was a completely new type of warship, soon to be known as battlecruisers. By the time the Germans learned of this it was too

late to turn back and construction of the Blücher took place as scheduled. The ship was named after the Prussian Field Marshal Gebhard von Blücher, the commander of the Prussian forces at the Battle of Waterloo in 1815.

A History of Sea Power William Oliver Stevens, Allan Ferguson Westcott, 1920

A History of War Crimes Trials in Post 1945 Asia-Pacific Zhaoqi Cheng, 2019-06-06 Written by the Director of the Tokyo Trial Research Centre at China's Shanghai Jiao Tong University, this book provides a unique analysis of war crime trials in Asia-Pacific after World War II. It offers a comprehensive review of key events during this period, covering preparations for the Trial, examining the role of the War Crimes Commission of the United Nations as well as offering a new analysis of the trial itself. Addressing the question of conventional war crimes, crimes against humanity, crimes against peace (such as the Pearl Harbor Incident) and violations of warfare law, it follows up with a discussion of post-trial events and the fate of war criminals on trial. Additionally, it examines other Japanese war crime trials which happened in Asia, as well as considering the legacy of the Tokyo trial itself, and the foundation of a new Post-War International Order in East Asia.

Japan's Empire Disaster Jean Sénat Fleury, 2021-04-27 A former judge with a passion for history, Jean Sénat Fleury was born in Haiti and currently lives in Boston. He wrote several historical books, such as: *The Stamp Trial*, *Jean-Jacques Dessalines: Words from Beyond the Grave*, *Toussaint Louverture: The Trial of the Slave Trafficking*, *Adolf Hitler: Trial in Absentia in Nuremberg*, *The Trial of Osama Bin Laden*, *Hirohito Guilty or Innocent: The Trial of the Emperor*. His new book, *Japan's Empire Disaster*, provides an understanding of the expansionist policy practiced by Japan during the end of the nineteenth and the first period of the twentieth century. From the adoption of the Meiji constitution in 1889 and the first period of the Shōwa era (1927-1945), the military controlled the Japanese constitutional government. The result was years of political instability, more internal conflicts, violence, murders, assassinations, overseas aggression, and war crimes. The book demonstrates that in Japan, during the Pacific War, the real driving force of the war was the Imperial Japanese Army and the Imperial Japanese Navy. Hirohito, as supreme commander, gave full support to the army and navy. On multiple occasions, he sanctioned many government policies. In fact, he was responsible for the atrocities that the Japanese troops committed in Asia during the Pacific War. *Japan's Empire Disaster* is a book of information and training. The book describes Japan's opening to modernization with the 1853 arrival of commodore Matthew Calbraith Perry in the country, and also details the history of the wars launched by Emperor Meiji and Emperor Hirohito to build Japan's empire in the nineteenth and the twentieth centuries.

The Valor of Ignorance Homer Lea, 1909 One of the foremost strategists of the American Army in the first decade of the twentieth century warns of the great danger of militarized Japan and forecasts -- 44 years before it actually happened -- the Japanese invasion of the Philippines. Evolution of Marine Coastal Ecosystems under the Pressure of Global Changes Hubert-Jean Ceccaldi,Yves Hénocque,Teruhisa Komatsu,Patrick Prouzet,Benoit Sautour,Jiro Yoshida,2020-06-15 Coastal and estuarine environments at the interface of terrestrial and marine areas are among the most productive in the world. However, since the beginning of the industrial era, these ecosystems have been subjected to strong anthropogenic pressures intensified from the second half of the 20th century, when there was a marked acceleration in the warming (climate change) of the continents, particularly at high latitudes. Coastal ecosystems are highly vulnerable to alteration of their physical, chemical and biological characteristics (marine intrusion, acidification of marine environments, changes in ecosystems, evolution and artificialization of the coastline, etc.).In contact with heavily populated areas, these environments are often the receptacle of a lot of chemical and biological pollution sources that significantly diminish their resilience. In this context of accelerated evolution and degradation of these areas important for food security of many populations around the world, it is necessary to better identify the factors of pressure and understand, at different scales of observation, their effects and impacts on the biodiversity and on the socio-eco-systems, in order to determine the degree of vulnerability of these coastal ecosystems and the risks they face. A transdisciplinary and integrated approach is required to prevent risks. Within this framework, operational coastal oceanography occupies an important place but also the implementation of a true

socio-eco-system approach in order to set up an environmentally friendly development.

Reports of General MacArthur Douglas MacArthur, Supreme Commander for the Allied Powers, Charles Andrew Willoughby, 1994

Reports of General MacArthur: MacArthur in Japan: The Occupation: Military Phase. Volume 1 Supplement Douglas MacArthur, Harold K. Johnson, 2012-09-01 With full color maps. From the foreword: The Reports of General MacArthur include two volumes being published by the Department of the Army in four books reproduced exactly as they were printed by General

MacArthur's Tokyo headquarters in 1950, except for the addition of this foreword and indexes. Since they were Government property, the general turned over to the Department in 1953 these volumes and related source materials. In Army and National Archives custody these materials have been available for research although they have not been easily accessible. While he lived, General MacArthur was unwilling to approve the reproduction and dissemination of the Reports, because he believed they needed further editing and correction of some inaccuracies. His passing permits publication but not the correction he deemed desirable. In publishing them, the Department of the Army must therefore disclaim any responsibility for their accuracy. But the Army also recognizes that these volumes have substantial and enduring value, and it believes the American people are entitled to have them made widely available through government publication. Volume I Supplement describes the military phase of the occupation through December 1948, reporting events not treated elsewhere in American publications.

Jellyfish Blooms Kylie A. Pitt, Cathy H. Lucas, 2013-11-04

Jellyfish are one of the most conspicuous animals in our oceans and are renowned for their propensity to form spectacular blooms. The unique features of the biology and ecology of jellyfish that enable them to bloom also make them successful invasive species and, in a few places around the world, jellyfish have become problematic. As man increasingly populates the world's coastlines, interactions between humans and jellyfish are rising, often to the detriment of coastal-based industries such as tourism, fishing and power generation. However we must not lose sight of the fact that jellyfish have been forming blooms in the oceans for at least 500 million years, and are an essential component of normal, healthy ocean ecosystems. Here many of the world's leading jellyfish experts explore the science behind jellyfish blooms. We examine the unique features of jellyfish biology and ecology that cause populations to 'bloom and bust', and, using case studies, we show

why jellyfish are important to coastal and ocean ecosystem function. We outline strategies coastal managers can use to mitigate the effects of blooms on coastal industries thereby enabling humans to coexist with these fascinating creatures. Finally we highlight how jellyfish benefit society; providing us with food and one of the most biomedically-important compounds discovered in the 20th century.
