*Amtracs* Steven J. Zaloga,1999-09-01 The first prototype for the LVT (Landing Vehicle Tracked) was completed in July 1941, its design based on the Alligator, a tracked amphibious vehicle developed for rescue operations in the swamps of Florida. Though the early conception of amtrac operations envisioned using LVTs solely as supply vehicles, at Tarawa amtracs demonstrated their utility as assault vehicles to carry troops, leading to the development of new models. This book covers the evolution of amtracs, from the first LVT-1 to the LVT-7; their numerous variants; and their use throughout World War II and beyond.

**Analysis and Simulation of the Advanced Amphibious Assault Vehicle (AAAV) Electrical System Architecture** Gabriel Beltran,2000-06-01 The Advanced Amphibious Assault Vehicle (AAAV) is a high water speed amphibious armored personnel carrier that will replace the current family of Marine Corps amphibious assault vehicles. The AAHV is currently in Phase I of the DOD Acquisition Process. During this phase-extensive development, testing is being conducted and prototypes are being constructed. Ongoing tests of the current electrical system architecture are revealing problems and issues that need to be addressed. Present testing is also revealing the need for a troubleshooting tool that can be used to simulate and test proposed solutions. A distributive computing effort is being conducted with Purdue University in order to provide the Marine Corps a tool where by it can test and evaluate the entire AAHV electrical system architecture. This document provides a general system description of the AAHV, an electrical system architecture overview, and a candidate electrical system description. Testing, modeling, and computer simulation efforts applied to the NBC (Nuclear, Biological, and Chemical) fan/ filter motor drive and battery banks are described and the resulting data analyzed. Current research is investigating an issue regarding energy being forced back into the high power distribution bus due to regeneration from sudden impacts on the vehicle turret. An ultra capacitor bank may be incorporated in the AAHV electrical system in an effort to mitigate the effect of this regenerative energy. Therefore, testing, modeling, and computer simulation of an ultra capacitor is also reported.

A Case Study of the Advanced Amphibious Assault Vehicle (AAHV) Program from a Program Management Perspective Scott R. Adams,Naval Postgraduate School (U.S.),1999-03-01 This research effort focused on the program management issues of the U.S. Marine Corps' Advanced Amphibious Assault Vehicle (AAHV) Program. The research answered the primary question of what were the critical program management decisions during the early phases of the program and how would an analysis of these decisions affect the future of the AAHV program. Interviews were conducted with key personnel from the AAHV office and General Dynamics Land Systems. Additionally, program documents and other relevant literature were reviewed. The key findings of the research effort concluded that reducing technical risk early in program is critical; Program Managers (PMs) must influence system design as early as possible; physical collocation of Government and contractor personnel facilitates the implementation of integrated Product and Process Development (IPPD) and Integrated Product Teams (IPTs); the use of IPPD and IPTs has helped the AAHV program but personnel need to be trained before implementation; adopting an evolutionary acquisition strategy will help prevent component obsolescence prior to fielding; and PMs should use special contracting provisions to incentivize contractors to reduce total ownership costs.

**Performance Analysis of the Advanced Amphibious Assault Vehicle Personnel Variant (AAHV-P) Vetronics Communications System High Speed Data Bus** Deborah G. Peyton,Naval Postgraduate School (U.S.),1999-06-01 The United States Marine Corps Advanced Amphibious Assault Vehicle Personnel Variant (AAHV-P) is a critical weapon system that supports the Naval Operational Maneuver from the Sea (OMFTS) concept. The AAHV-P will provide the Marine Corps with the ability to project naval power ashore in support of strategic objectives. The Marine Corps is relying on the AAHV-P to exploit the sea and land terrain in order to attain surprise and be able to rapidly take advantage of weak points in enemy littoral defenses. The first prototype of the AAHV-P will be completed in June 1999. Successful operation of the AAHV-P is heavily dependent upon the Vetronics System communications network residing within the vehicle. The Vetronics System supports three networks: a High Speed Data Bus, a Utility Bus, and a Powertrain Bus. This thesis develops a model of the High Speed Data Bus, which is considered the main data bus within the AAHV- P. The simulation results of the model are analyzed to determine if the High Speed Data Bus is properly designed to handle the anticipated communications traffic that will traverse the network. The network performance capability is evaluated under various scenarios.

**Application of Lightweighting Technology to Military Aircraft, Vessels, and Vehicles** National Research Council,Division on Engineering and Physical Sciences,National Materials and Manufacturing Board,Committee on Benchmarking the Technology and Application of Lightweighting,2012-04-27 Lightweighting is a concept well known to structural designers and engineers in all applications areas, from laptops to bicycles to automobiles to buildings and airplanes. Reducing the weight of structures can provide many advantages, including increased energy efficiency, better design, improved usability, and better coupling with new, multifunctional features. While lightweighting is a challenge in commercial structures, the special demands of military vehicles for survivability, maneuverability and transportability significantly stress the already complex process. Application of Lightweighting Technology to Military Vehicles, Vessels, and Aircraft assesses the current state of lightweighting implementation in land, sea, and air vehicles and recommends ways to improve the use of lightweight materials and solutions. This book considers both lightweight materials and lightweight design; the availability of lightweight materials from domestic manufacturers; and the performance of lightweight materials and their manufacturing technologies. It also considers the trade space-that is, the effect that use of lightweight materials or technologies can have on the performance and function of all vehicle systems and components. This book also discusses manufacturing capabilities and affordable manufacturing technology to facilitate lightweighting. Application of Lightweighting Technology to Military Vehicles, Vessels, and Aircraft will be of interest to the military, manufacturers and designers of military equipment, and decision makers.

*U.S. Marines In Vietnam: The Landing And The Buildup, 1965* Dr. Jack Shulimson,Maj. Charles M. Johnson,2016-08-09 This is the second volume in a series of chronological histories prepared by the Marine Corps History and Museums Division to cover the entire span of Marine Corps involvement in the Vietnam War. This volume details the Marine activities during 1965, the year the war escalated and major American combat units were committed to the conflict. The narrative traces the landing of the nearly 5,000-man 9th Marine Expeditionary Brigade and its transformation into the III Marine Amphibious Force, which by the end of the year contained over 38,000 Marines. During this period, the Marines established three enclaves in South Vietnam's northernmost corps area, I Corps, and their mission expanded from defense of the Da Nang Airbase to a balanced strategy involving base defense, offensive operations, and pacification. This volume continues to treat the activities of Marine advisors to the South Vietnamese armed forces but in less detail than its predecessor volume, U.S. Marines in Vietnam, 1954-1964; The Advisory and Combat Assistance Era.

**Naval Mine Warfare** National Research Council,Division on Engineering and Physical Sciences,Naval Studies Board,Committee for Mine Warfare Assessment,2001-10-19 Sea mines have been important in naval warfare throughout history and continue to be so today. They have caused major damage to naval forces, slowed or stopped naval actions and commercial shipping, and forced the alteration of strategic and tactical plans. The threat posed by sea mines continues, and is increasing, in today's world of inexpensive advanced electronics, nanotechnology, and multiple potential enemies, some of which are difficult to identify. This report assesses the Department of the Navy's capabilities for conducting naval mining and countermining sea operations.
