**The Life of Ibn Sina** Avicenna, Abū ʿAlī al-ʿUsayn b. ʿAbd Allāh Ibn Sīnā, ʿAbd al-Wahhīd Jazjānī, 1974-01-01

*Avicenna and the Visionary Recital* Henry Corbin, 2014-07-14 In this work a distinguished scholar of Islamic religion examines the mysticism and psychological thought of the great eleventh-century Persian philosopher and physician Avicenna (Ibn Sina), author of over a hundred works on theology, logic, medicine, and mathematics. Henry Corbin's discovery in an Istanbul library of the manuscript of a Persian translation of and commentary on Avicenna's *Hayy ibn Yaqzan*, written in Arabic, led him to an analysis of three of Avicenna's mystical recitals. These form an initiatory cycle leading the adept along the path of spiritual progress. In Part I Corbin summarizes the great themes that show the philosophical situation of Avicennan man in the cosmos and presents translations of these three great Avicennan recitals. Part II is a complete translation, with notes, of the Persian commentary. Originally published in 1960. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

**Lost Enlightenment** S. Frederick Starr, 2015-06-02 The forgotten story of Central Asia's enlightenment—its rise, fall, and enduring legacy In this sweeping and richly illustrated history, S. Frederick Starr tells the fascinating but largely unknown story of Central Asia's medieval enlightenment through the eventful lives and astonishing accomplishments of its greatest minds—remarkable figures who built a bridge to the modern world. Because nearly all of these figures wrote in Arabic, they were long assumed to have been Arabs. In fact, they were from Central Asia—drawn from the Persianate and Turkic peoples of a region that today extends from Kazakhstan southward through Afghanistan, and from the easternmost province of Iran through Xinjiang, China. *Lost Enlightenment* recounts how, between the years 800 and 1200, Central Asia led the world in trade and economic development, the size and sophistication of its cities, the refinement of its arts, and, above all, in the advancement of knowledge in many fields. Central Asians achieved signal breakthroughs in astronomy, mathematics, geology, medicine, chemistry, music, social science, philosophy, and theology, among other subjects. They gave algebra its name, calculated the earth's diameter with unprecedented precision, wrote the books that later defined European medicine, and penned some of the world's greatest poetry. One scholar, working in Afghanistan, even predicted the existence of North and South America—five centuries before Columbus. Rarely in history has a more impressive group of polymaths appeared at one place and time. No wonder that their writings influenced European culture from the time of St. Thomas Aquinas down to the scientific revolution, and had a similarly deep impact in India and much of Asia. *Lost Enlightenment* chronicles this forgotten age of achievement, seeks to explain its rise, and explores the competing theories about the cause of its eventual demise. Informed by the latest scholarship yet written in a lively and accessible style, this is a book that will surprise general readers and specialists alike.

**Avicenna's Medicine** Mones Abu-Asab, Hakima Amri, Marc S. Micozzi, 2013-07-04 The first contemporary translation of the 1,000-year-old text at the foundation of modern medicine and biology • Presents the actual words of Avicenna translated directly from the original Arabic, removing the inaccuracies and errors of most translators • Explains current medical interpretations and ways to apply Avicenna's concepts today, particularly for individualized medicine • Reveals how Avicenna's understanding of the "humors" corresponds directly with the biomedical classes known today as proteins, lipids, and organic acids A millennium after his life, Avicenna remains one of the most highly regarded physicians of all time. His *Canon of Medicine*, also known as the *Qanun*, is one of the most famous and influential books in the history of medicine, forming the basis for our modern understanding of human health and disease. It focused not simply on the treatment of symptoms, but on finding the cause of illness through humoral diagnosis—a method still used in traditional Unani

and Ayurvedic medicines in India. Originally written in Arabic, Avicenna's Canon was long ago translated into Latin, Persian, and Urdu, yet many of the inaccuracies from those first translations linger in current English translations. Translated directly from the original Arabic, this volume includes detailed commentary to explain current biomedical interpretations of Avicenna's theories and ways to apply his treatments today, particularly for individualized medicine. It shows how Avicenna's understanding of the humors corresponds directly with the biomedical definition of proteins, lipids, and organic acids: the nutrient building blocks of our blood and body. With this new translation of the first volume of his monumental work, Avicenna's Canon becomes just as relevant today as it was 1,000 years ago.

The Road to Oxiana Robert Byron, 2021-08-31 Begin a voyage through Persia and Afghanistan with renowned explorer Robert Byron in 'The Road to Oxiana'. This travelog recounts Byron's ten-month adventure, immersing readers in the rich tapestry of the Middle East, from Venice to Peshawar. As Byron travels through vibrant landscapes and encounters diverse cultures, he showcases his extensive knowledge of the region's architectural wonders. With the Persian Expedition Martin Henry Donohoe, 1919

Classical Arabic Philosophy, 2007-03-15 This volume introduces the major classical Arabic philosophers through substantial selections from the key works (many of which appear in translation for the first time here) in each of the fields—including logic, philosophy of science, natural philosophy, metaphysics, ethics, and politics—to which they made significant contributions. An extensive Introduction situating the works within their historical, cultural, and philosophical contexts offers support to students approaching the subject for the first time, as well as to instructors with little or no formal training in Arabic thought. A glossary, select bibliography, and index are also included.

**The Politics of Knowledge in Premodern Islam** Omid Safi, 2006-01-01 The eleventh and twelfth centuries comprised a period of great significance in Islamic history. The Great Saljuqs, a Turkish-speaking tribe hailing from central Asia, ruled the eastern half of the Islamic world for a great portion of that time. In a far-r

**Early Mongol Rule in Thirteenth-Century Iran** George E. Lane, 2003-09-01 An account of the re-emergence of Persia as a world player and the reassertion of its cultural, political and spiritual links with Turkic Lands, this book opposes the way in which, for too long, the whole period of Mongol domination of Iran has been viewed from a negative standpoint. Though arguably the initial irruption of the Mongols brought little comfort to those in its path, this is not the case with the second 'invasion' of the Chinggisids. This study demonstrates that Hülegü Khan was welcomed as a king and a saviour after the depredations of his predecessors, rather than as a conqueror, and that the initial decades of his dynasty's rule were characterised by a renaissance in the cultural life of the Iranian plateau.

*Clothing Sacred Scriptures* David Ganz, Barbara Schellewald, 2018-12-03 According to a longstanding interpretation, book religions are agents of textuality and logocentrism. This volume inverts the traditional perspective: its focus is on the strong dependency between scripture and aesthetics, holy books and material artworks, sacred texts and ritual performances. The contributions, written by a group of international specialists in Western, Byzantine, Islamic and Jewish Art, are committed to a comparative and transcultural approach. The authors reflect upon the different strategies of »clothing« sacred texts with precious materials and elaborate forms. They show how the pretypographic cultures of the Middle Ages used book ornaments as media for building a close relation between the divine words and their human audience. By exploring how art shapes the religious practice of books, and how the religious use of books shapes the evolution of artistic practices this book contributes to a new understanding of the deep nexus between sacred

scripture and art.

This short work offers an accessible, lucid, and deeply learned, guide through the 'living tradition' of Shī'ī philosophy.

**Encyclopedia of Pestilence, Pandemics, and Plagues [2 volumes]** Joseph P.

Byrne, 2008-09-30 Editor Joseph P. Byrne, together with an advisory board of specialists and over 100 scholars, research scientists, and medical practitioners from 13 countries, has produced a uniquely interdisciplinary treatment of the ways in which diseases pestilence, and plagues have affected human life. From the Athenian flu pandemic to the Black Death to AIDS, this extensive two-volume set offers a sociocultural, historical, and medical look at infectious diseases and their place in human history from Neolithic times to the present. Nearly 300 entries cover individual diseases (such as HIV/AIDS, malaria, Ebola, and SARS); major epidemics (such as the Black Death, 16th-century syphilis, cholera in the nineteenth century, and the Spanish Flu of 1918-19); environmental factors (such as ecology, travel, poverty, wealth, slavery, and war); and historical and cultural effects of disease (such as the relationship of Romanticism to Tuberculosis, the closing of London theaters during plague epidemics, and the effect of venereal disease on social reform). Primary source sidebars, over 70 illustrations, a glossary, and an extensive print and nonprint bibliography round out the work.

**Rabies** William H. Wunner, Alan C. Jackson, 2010-07-26 Rabies is the most current and comprehensive account of one of the oldest diseases known that remains a significant public health threat despite the efforts of many who have endeavored to control it in wildlife and domestic animals. During the past five years since publication of the first edition there have been new developments in many areas on the rabies landscape. This edition takes on a more global perspective with many new authors offering fresh outlooks on each topic. Clinical features of rabies in humans and animals are discussed as well as basic science aspects, molecular biology, pathology, and pathogenesis of this disease. Current methods used in defining geographic origins and animal species infected in wildlife are presented, along with diagnostic methods for identifying the strain of virus based on its genomic sequence and antigenic structure. This multidisciplinary account is essential for clinicians as well as public health advisors, epidemiologists, wildlife biologists, and research scientists wanting to know more about the virus and the disease it causes. \* Offers a unique global perspective on rabies where dog rabies is responsible for killing more people than yellow fever, dengue fever, or Japanese encephalitis \* More than 7 million people are potentially exposed to the virus annually and about 50,000 people, half of them children, die of rabies each year \* New edition includes greatly expanded coverage of bat rabies which is now the most prominent source of human rabies in the New World and Western Europe, where dog rabies has been controlled \* Recent successes of controlling wildlife rabies with an emphasis on prevention is discussed \* Approximately 40% updated material incorporates recent knowledge on new approaches to therapy of human rabies as well as issues involving organ and tissue transplantation \* Includes an increase in illustrations to more accurately represent this diseases' unique horror

**The Heart of Islamic Philosophy** William C. Chittick, 2001-10-11 This book introduces the work of an important medieval Islamic philosopher who is little known outside the Persian world. Afdal al-Din Kashani was a contemporary of a number of important Muslim thinkers, including

Averroes and Ibn al-Arabi. Kashani did not write for advanced students of philosophy but rather for beginners. In the main body of his work, he offers especially clear and insightful expositions of various philosophical positions, making him an invaluable resource for those who would like to learn the basic principles and arguments of this philosophical tradition but do not have a strong background in philosophy. Here, Chittick uses Kashani and his work to introduce the basic issues and arguments of Islamic philosophy to modern readers.

Medicine in Iran H. Ebrahimnejad, 2013-12-17 This book traces how medicine in modern Iran was both theoretically and institutionally transformed in the 19th and 20th centuries. It explores the process by which local physicians, in a non-colonial context, assimilated the emerging modern medicine and the institutional devices that accommodated this transition.

Urban World History Luc-Normand Tellier, 2019-09-14 This book seeks to deepen readers' understanding of world history by investigating urbanization and the evolution of urban systems, as well as the urban world, from the perspective of historical analysis. The theoretical framework of the approach stems directly from space-economy, and, more generally, from location theory and the theory of urban systems. The author explores a certain logic to be found in world history, and argues that this logic is spatial (in terms of spatial inertia, spatial trends, attractive and repulsive forces, vector fields, etc.) rather than geographical (in terms of climate, precipitation, hydrography). Accordingly, the book puts forward a truly original vision of urban world history, one that will benefit economists, historians, regional scientists, and anyone with a healthy curiosity.
