Airline Operations and Management Gerald N. Cook, Bruce G. Billig, 2023-05-04

Airline Operations and Management: A Management Textbook presents a survey of the airline industry, with a strong managerial perspective. It integrates and applies the fundamentals of several management disciplines, particularly operations, marketing, economics and finance, to develop a comprehensive overview. It also provides readers with a solid historical background, and offers a global perspective of the industry, with examples drawn from airlines around the world. Updates for the second edition include: Fresh data and examples A range of international case studies exploring real-life applications New or increased coverage of key topics such as the COVID-19 pandemic, state aid, and new business models New chapters on fleet management and labor relations and HRM Lecture slides for instructors This textbook is for advanced undergraduate and graduate students of airline management, but it should also be useful to entry and junior-level airline managers and professionals seeking to expand their knowledge of the industry beyond their functional area.

Airline Network Development in Europe and its Implications for Airport Planning

Guillaume Burghouwt, 2016-03-23 The ongoing deregulation and liberalization of worldwide air transport markets confronts airport planners with an increasingly problematic context. On the one hand, the capital intensive, large-scale and complex airport investments need a detailed, long/medium-term planning of airport infrastructure. Such planning requires at least predictable traffic volumes (and traffic composition) within the planning horizon. On the other hand, airline route networks are increasingly dynamic structures that frequently

show discontinuous changes. As a consequence, the much more volatile airport traffic restricts the value of detailed traffic forecasts. Volatility of airport traffic and its composition requires flexibility of airport strategies and planning processes. The book explores this dilemma through a detailed study of airline network development, airport connectivity and airport planning in the deregulated EU air transport market. The questions the book seeks to answer are: · how have airlines responded to the regime changes in EU aviation with respect to the configuration of their route networks? · what has been the impact of the reconfiguration of airline network configurations for the connectivity of EU airports? · how can airport planners and airport authorities deal with the increasingly uncertain airline network behaviour in Europe?

Airport Systems: Planning, Design and Management 2/E Richard de Neufville, Amedeo Odoni, Peter Belobaba, Tom Reynolds, 2013-04-23 THE MOST PRACTICAL, COMPREHENSIVE GUIDE TO THE PLANNING, DESIGN, AND MANAGEMENT OF AIRPORTS--UPDATED BY LEADING PROFESSIONALS With the accelerated rate of change occurring throughout the aviation industry, this edition is a timely and very effective resource for ensuring both airport professionals and those interested in airports acquire a comprehensive understanding of the changes taking place, and how they impact airports and the communities they serve. A must read. -- James M. Crites, Executive Vice President of Operations, Dallas/Fort Worth International Airport Airport Systems has been a must read for my management team and my graduate students because of its outstanding comprehensiveness and clarity. Now further enhanced by an expanded treatment of both environmental and air carrier issues, it promises to retain its place as the foremost text in

the airport planning, engineering and management field. -- Dr. Lloyd McCoomb, retired CEO Toronto-Pearson Airport, Chair of Canadian Air Transport Security Authority The chapter on Dynamic Strategic Planning should be required reading for every airport CEO and CFO. As de Neufville and Odoni emphasise, the aviation world is constantly changing and airport master planning must evolve to be more strategic and adaptable to ever changing conditions. -- Dr. Michael Tretheway, Chief Economist, InterVISTAS Consulting Group Over the past decade, the airport industry has evolved considerably. Airport technology has changed. New research has taken place. The major airlines have consolidated, changing demand for airport services. In order to reflect these and other major shifts in the airport industry, some of the world's leading professionals have updated the premier text on airport design – making it, now more than ever, the field's most comprehensive resource of its kind. NEW TO THIS EDITION: Chapter-ending conclusions, with reference material, and exercises Coverage of the latest aircraft technology and air traffic control Advances in the design, planning, and management of airports Additional chapter on Aircraft Impact on Airports Updated environmental regulations and international rules Two contributing authors from Massachusetts Institute of Technology

Introduction to Air Transport Economics Bijan Vasigh, Ken Fleming, 2016-05-06
Introduction to Air Transport Economics: From Theory to Applications uniquely merges the institutional and technical aspects of the aviation industry with their theoretical economic underpinnings. In one comprehensive textbook it applies economic theory to all aspects of the aviation industry, bringing together the numerous and informative articles and institutional developments that have characterized the field of airline economics in the last

two decades as well as adding a number of areas original to an aviation text. Its integrative approach offers a fresh point of view that will find favor with many students of aviation. The book offers a self-contained theory and applications-oriented text for any individual intent on entering the aviation industry as a practicing professional in the management area. It will be of greatest relevance to undergraduate and graduate students interested in obtaining a more complete understanding of the economics of the aviation industry. It will also appeal to many professionals who seek an accessible and practical explanation of the underlying economic forces that shape the industry. The second edition has been extensively updated throughout. It features new coverage of macroeconomics for managers, expanded analysis of modern revenue management and pricing decisions, and also reflects the many significant developments that have occurred since the original's publication. Instructors will find this modernized edition easier to use in class, and suitable to a wider variety of undergraduate or graduate course structures, while industry practitioners and all readers will find it more intuitively organized and more user friendly.

Contemporary Management Dianne Waddell, 2013 This unique text follows a nonprescriptive, real-world approach to management and is written in an accessible style allowing for flexibility in both teaching and learning. Used at both an undergraduate and postgraduate level, Contemporary Management has a concise structure designed to meet the needs of trimesters and 12 week teaching schedules. The uncluttered internal design alongside the modern treatment of the topic makes this text significantly different to other texts in the market. It offers updated content to reflect the impact of the GFC and the increasing significance of diversity, culture and ethics. There are all new in-chapter case

studies, new Australian videos and a full range of excellent online resources. Also, this edition includes a new end of book section containing two unique integrated case studies exploring tourism management in Australian tourism destinations: Skyrail in Cairns and Flinders Island, Tasmania. Renewable Energy Mansour Al Qubeissi,Ahmad El-Kharouf,Hakan Serhad Soyhan,2020-09-09 The demand for secure, affordable and clean energy is a priority call to humanity. Challenges associated with conventional energy resources, such as depletion of fossil fuels, high costs and associated greenhouse gas emissions, have stimulated interests in renewable energy resources. For instance, there have been clear gaps and rushed thoughts about replacing fossil-fuel driven engines with electric vehicles without long-term plans for energy security and recycling approaches. This book aims to provide a clear vision to scientists, industrialists and policy makers on renewable energy resources, predicted challenges and emerging applications. It can be used to help produce new technologies for sustainable, connected and harvested energy. A clear response to economic growth and clean environment demands is also illustrated.

Evolution of Innovation Management A. Brem, E. Viardot, 2013-01-30 Uses new approaches and solutions to tackle innovations in an international context. Some of the challenges of innovating are remarkably consistent and recent times have shown the emergence of new ways for stimulating and managing the innovation process. The authors explore these new routes and assess their value for markets and companies.

Film Studies Glyn Davis, Kay Dickinson, Lisa Patti, Amy Villarejo, 2015-02-20 *Film Studies: A Global Introduction* reroutes film studies from its Euro-American focus and canon in order to introduce students to a medium that has always been global but has become differently and insistently so in the digital age. Glyn Davis, Kay Dickinson, Lisa Patti and Amy Villarejo's approach encourages readers to think about film holistically by looking beyond the textual analysis of key films. In contrast, it engages with other vital areas, such as financing, labour, marketing, distribution, exhibition, preservation, and politics, reflecting contemporary aspects of cinema production and consumption worldwide. Key features of the book include: clear definitions of the key terms at the foundation of film studies coverage of the work of key thinkers, explained in their social and historical context a broad range of relevant case studies that reflect the book's approach to global cinema, from Italian white telephone films to Mexican wrestling films innovative and flexible exercises to

help readers enhance their understanding of the histories, theories, and examples introduced in each chapter an extensive Interlude introducing readers to formal analysis through the careful explication and application of key terms a detailed discussion of strategies for writing about cinema Films Studies: A Global Introduction will appeal to students studying film today and aspiring to work in the industry, as well as those eager to understand the world of images and screens in which we all live.

Curran, 2007-08-10 This volume features the proceedings of the 14th ISPE Conference on Concurrent Engineering, held in São José dos Campos, São Paulo, Brazil, on the 16th – 20th of July 2007. It highlights the application of concurrent engineering to the development of complex systems.

Air transport – tourism nexus: A destination management perspective Maya Georgieva Ivanova, 2017-06-18 The aim of current research monograph is to provide a deeper view of the complex relationship between the air transport and tourism industries. The adopted point of view – a destination perspective – enables one to go into a more detailed exploration of the topic and to consider issues that usually remain invisible at the strategic managers' level. The elaborated destination analysis framework and the identification of common points between aviation and tourism set the groundwork for further examination of the air transport-tourism nexus. Therefore, the book would be useful both for students and researchers in the field of tourism, hospitality and destination management, and for practitioners and destination management representatives who may find interesting insights and ideas for improvement. The monograph would be suitable also for managers

and representatives from the air transport industry by providing them with the other point of view – that of the local tourist destination – to consider in their strategic growth and negotiation process.
