Telepresence & Bio Art Eduardo Kac,2005 Eduardo Kac's work represents a turning point. What it questions is our current attitudes to creativity, taking that word in its most fundamental sense. -Edward Lucie-Smith, author of *Visual Arts in the 20th Century* His works introduce a vital new meaning into what had been known as the creative process while at the same time investing the notion of the artist-inventor with an original social and ethical responsibility. -Frank Popper, author of *Origins and Development of Kinetic Art* Kac's radical approach to the creation and presentation of the body as a wet host for artificial memory and 'site-specific' work raises a variety of important questions that range from the status of memory in digital culture to the ethical dilemmas we are facing in the age of bioengineering and tracking technology. -Christiane Paul, Whitney Museum of Art For nearly two decades Eduardo Kac has been at the cutting edge of media art, first inventing early online artworks for the web and continuously developing new art forms that involve telecommunications and robotics as a new platform for art. Interest in telepresence, also known as telerobotics, exploded in the 1990s, and remains an important development in media art. Since that time, Kac has increasingly moved into the fields of biology and biotechnology. *Telepresence and Bio Art* is the first book to document the evolution of bio art and the aesthetic development of Kac, the creator of the artist's gene as well as the controversial glow-in-the-dark, genetically engineered rabbit Alba. Kac covers a broad range of topics within media art, including telecommunications media, interactive systems and the Internet, telematics and robotics, and the contact between electronic art and

biotechnology. Addressing emerging and complex topics, this book will be essential reading for anyone interested in contemporary art.

Electric Airplanes and Drones Kevin Desmond,2018-09-14 Attempts at electric powered flight date to well before the 19th century. Battery weight and low energy output made it impractical until the 1990s, when the advent of lightweight materials, more efficient solar power, improved engines and the Li-Po (lithium polymer) battery opened the skies to a wide variety of electric aircraft. The author describes the diverse designs of modern electric flying machines—from tiny insect-styled drones to stratospheric airships—and explores developing trends, including flying cars and passenger airliners.

Dawn on My Mind Winroy O. Williams “WOW”,2009-12-22 ABOUT THE BOOK Dawn On My Mind is a collection of poems through which the author seeks to hold a reasoning with you, the reader. Williams shares his thoughts about life and living in a way that is simple, generous and honest. The range of subjects that he broaches is diverse; nature, life, humour, romance are a few and the pieces are captivating from start to finish. The use of literary devices is quite successful as they creatively express what is on his mind. The simple style but deep message that each poem conveys, work well, as they do not lend themselves to over-interpretation. Part One, titled, Thoughts of Power, helps you reaffirm your purpose for living. Part Two, called Perspectives, is quite thought-provoking with a clever play on words which stimulates you to derive an understanding based on your own perspective on the subject(s). This section includes Dawn On My Mind, the must-read title poem. Truth be told, the ideas, Williams admits, are not new but they are cleverly expressed and will make you go, wow!

The DelFly G.C.H.E. de Croon,M. Perçin,B.D.W. Remes,R. Ruijsink,C. De Wagter,2015-11-26 This book introduces the topics most relevant to autonomously flying flapping wing robots: flapping-wing design, aerodynamics, and artificial intelligence. Readers can explore these topics in the context of the DelFly, a flapping wing robot designed at Delft University in The Netherlands. How are tiny fruit flies able to lift their weight, avoid obstacles and predators, and find food or shelter? The first step in emulating this is the creation of a micro flapping wing robot that flies by itself. The challenges are considerable: the design and aerodynamics of flapping wings are still active areas of scientific research, whilst artificial intelligence is subject to extreme limitations deriving from the few sensors and minimal processing onboard. This book conveys the essential insights that lie behind success such as the DelFly Micro and the DelFly Explorer. The DelFly Micro, with its 3.07 grams and 10 cm wing span, is still the smallest flapping wing MAV in the world carrying a camera, whilst the DelFly Explorer is the world's first flapping wing MAV that is able to fly completely autonomously in unknown environments. The DelFly project started in 2005 and ever since has served as inspiration, not only to many scientific flapping wing studies, but also the design of flapping wing toys. The combination of introductions to relevant fields, practical insights and scientific experiments from the DelFly project make this book a must-read for all flapping wing enthusiasts, be they students, researchers, or engineers.
