Russia's Military Modernisation: An Assessment The International Institute for Strategic Studies (IISS), 2020-09-29 This new IISS Strategic Dossier examines the recent development of Moscow's armed forces and military capabilities. It analyses the aspirations underpinning Russia's military reform programme and its successes as well as its failures. The book also provides insights into Russia's operational use of its armed forces, including in the intervention in Syria, the goals and results of recent state armament programmes, and the trajectory of future developments. This full-colour volume includes more than 50 graphics, maps and charts and over 70 images, and contains chapters on: Russia's armed forces since the end of the Cold War Strategic forces Ground forces Naval forces Aerospace forces Russia's approach to military decision-making and joint operations Economics and industry At a time when Russia's relations with many of its neighbours are increasingly strained, and amid renewed concern about the risk of an armed clash, this dossier is essential reading for understanding the state, capabilities and future of Russia's armed forces.

Visual Aircraft Recognition U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and

some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

People's Liberation Army After Next Susan M

Puska, 2012-08-01 An analytical schism has developed over differing assessments of China's military modernization. Underlying this debate are at least two key questions. First, will the ongoing China's People's Liberation Army (PLA) modernization provide China with significant offensive power projection and/or preemptive capability? If so, by when? Second, does the pace and success of China's military modernization constitute a threat to the United States and/or its friends and allies in the Asia-Pacific region? At the source of these differing views on the pace and likely success of the PLA modernization is a lack of hard evidence, aggravated by a Chinese tendency to conceal both strengths and weaknesses. There are also analysts who are locked into positions on the PLA that the evidence seems unable to alter. Lack of information is often muddled by anecdotal knowledge, sometimes provided by Chinese interlocutors, that may be impossible to confirm or refute. In addition, a large body of conventional wisdom about the PLA has built up over time, which may inhibit fresh reassessment. Finally, peer comparisons of the PLA to the U.S. military, which is without equal in the post-Cold War period, may shape analysis of the PLA's capabilities and shortfalls. As a result, conclusions about China's military modernization often leave considerable room for interpretation on any side of an argument. The policy decisions made today based in part on the absence of hard analysis will likely haunt U.S. and allied policy and interests well into the 21st century, as China's comprehensive strength and historic aspirations mature. In order to minimize miscalculations about the PLA modernization,

debate is essential, for it can help reduce the twin analytical evils of overestimation and underestimation. Debate can reduce wishful thinking or demonization about China's strategic capability and intentions. It may also preclude counterproductive self-imposed constraints on U.S. policy options based on fear of self-fulfilling prophecies of a China threat. Active debate, finally, can lead to a reevaluation of old, well-worn assumptions, and spur greater exploitation of publicly available information about the PLA and China's national security. All of this would potentially help to develop a clearer picture of China's People's Liberation Army After Next into the 21st century.

The United States and a Rising China Zalmay Khalilzad, 1999 China has been embarked on a process of reform and modernization that has led to unprecedented economic development. The goal is to make China a developed country, which would, among other things, raise the standard of living and prepare the base for a strong military. The Chinese leadership considers good relations with the United States to be strongly advisable, if not absolutely necessary, but sovereignty concerns (especially with regard to Taiwan) could cause tensions in the Sino-U.S. relationship. China could emerge, by 2015, as a formidable power, one that might offer an alternative to the current U.S. role as the region's preferred security partner and its ultimate security manager. At present, the best U.S. response appears to be a combination of engagement and containment, a conengagement policy that would continue to try to bring China into the current international system while both preparing for a possible Chinese challenge to it and seeking to convince the Chinese leadership that a challenge would be difficult and extremely risky to pursue.

Surface Ship Operations United States. Naval Education and Training Command, 1978

Red Army Ralph Peters,1990 From the cockpit of a MIG to the foot soldiers and tankers on the scarred, bloody battlefields to the four-star general commanding the attack, Red Army is a riveting portrayal of modern war--and of human strengths and weaknesses. Seen entirely through Russian eyes, this extraordinary novel is destined to become a classic.

Gulf Military Forces in an Era of Asymmetric Wars Khalid Al-Rodhan,Anthony H. Cordesman,2006-12-30 The significance of the Persian Gulf to international peace and security and to the global energy market cannot be overstated. Events such as the attacks of September 11 and the rise in energy demand and prices have only highlighted the importance of stability in the Gulf to the health of the global economy. This book demonstrates that the nature of military and political threats in the Gulf states (Bahrain, Saudi Arabia, Iran, Iraq, Qatar, Yemen, and the UAE) has shifted during the past three years. Although the threat from Saddam Hussein's Iraq, which produced three recent, major conventional wars-Iran-Iraq (1980-88), Persian Gulf (1990), and Iraq (2003)-has largely disappeared, it has been replaced by concerns over the asymmetric warfare conducted by terrorist organizations and over the proliferation of WMDs by both states and terrorists. These developments are affecting the defense planning and strategic posture of each country, and this book analyzes developments in the force structures of the Gulf states and their ability to deal with this shift in the nature of the threat. The military and security forces of the Gulf states must evolve to adapt to the changing nature of the threat and take into account the risk of the Iraqi insurgency and the uncertainty surrounding Iraq's future. The key areas covered in this book include the internal terrorist threat to Saudi Arabia and the Gulf states; the impact of Iran's

nuclear program and the risk it poses to energy and internal security in the Gulf area; and border disputes within the region that could develop into conflict. In addition, the book studies the impact of the Iraq War on regional security and the fear of the insurgency spilling over into neighboring states. Cordesman and Al-Rodhan demonstrate a shift toward using internal security services to deal with the threat of extremism and asymmetric warfare. They also suggest that high energy prices and export revenues provide the Gulf countries the opportunity to upgrade their military forces and deal with their undercapitalization as a result of low oil prices in the 1990s. Moreover, they insist that the future of Iraq, the strategic and nuclear posture of Iran, and the terrorist threat will remain major risks and uncertainties in the short to medium run.

Air Power and National Security Ramesh V.

Phadke, 2015 Every conflict since World War II has seen an increasingly bigger role of air power. This study highlights the major air power lessons major conflicts, and explains air power roles and missions. It also discusses the somewhat contentious subject of air power in support of surface forces and traces the IAF's contribution in war and peace in the years since independence.

Historical Dictionary of Air Intelligence Glenmore S.

Trehear-Harvey, 2009-04-13 From the moment man learned how to ascend off the ground, the strategic significance of air intelligence became apparent. This relatively new discipline_the first dedicated air reconnaissance missions were undertaken in 1870 during the siege of Paris when tethered French balloons were employed to spot enemy positions and direct artillery fire onto them_has developed at an astonishing speed. Over the past century air intelligence has moved from hazardous observation balloons to micro-circuitry, which can send pictures from a

video camera mounted on a remotely-controlled vehicle the size of a hummingbird. The Historical Dictionary of Air Intelligence relates the evolving history of the rapidly advancing field of air intelligence. A chronology, an introductory essay, and cross-referenced dictionary entries on the agencies, agents, operations, equipment, tradecraft, and jargon of air intelligence make this reference as essential as it is fascinating.

Hidden History of Transportation in Los Angeles

Charles P. Hobbs, 2014-11-04 Los Angeles transportation's epic scale--its iconic freeways, Union Station, Los Angeles International Airport and the giant ports of its shores--has obscured many offbeat transit stories of moxie and eccentricity. Triumphs such as the Vincent Thomas Bridge and Mac Barnes's Ground Link buspool have existed alongside such flops as the Santa Monica Freeway Diamond Lane and the Oxnard-Los Angeles Caltrain commuter rail. The City of Angels lacks a propeller-driven monorail and a freeway in the paved bed of the Los Angeles River, but not for a lack of public promoters. Horace Dobbins built the elevated California Cycleway in Pasadena, and Mike Kadletz deployed the Pink Buses for Orange County kids hitchhiking to the beach. Join Charles P. Hobbs as he recalls these and other lost episodes of LA-area transportation lore.

Postwar Aircraft Jerry Scutts, 2000-10-27 Postwar military aviation is dominated by the multi-role jet aircraft. This book looks at military jets from the F-86 Sabre of the Korean War through to the Tornados and F-18s of today and the key issues associated with accurate detailing, markings and camouflage schemes.

The Development of Jet and Turbine Aero Engines

Bill Gunston, 2006 Using language understandable to those without an engineering background and avoiding complex

mathematical formulae, Bill Gunston explains the differences between gas-turbine, jet, rocket, ramjet and helicopter turbo shaft aero engines and traces their histories from the early days through to today's complex and powerful units as used in the latest wide-bodied airliners and high performance military jets.

Reinforcing Deterrence on NATO's Eastern Flank

David A. Shlapak, Michael W. Johnson, 2016 Russia's recent aggression against Ukraine has disrupted nearly a generation of relative peace and stability between Moscow and its Western neighbors and raised concerns about its larger intentions. From the perspective of the North Atlantic Treaty Organization (NATO), the threat to the three Baltic republics of Estonia, Latvia, and Lithuania -- former Soviet republics, now member states that border Russian territory -- may be the most problematic of these. In a series of war games conducted between summer 2014 and spring 2015, RAND Arroyo Center examined the shape and probable outcome of a near-term Russian invasion of the Baltic states. The games' findings are unambiguous: As presently postured, NATO cannot successfully defend the territory of its most exposed members. Fortunately, it will not require Herculean effort to avoid such a failure. Further gaming indicates that a force of about seven brigades, including three heavy armored brigades -- adequately supported by airpower, land-based fires, and other enablers on the ground and ready to fight at the onset of hostilities -- could suffice to prevent the rapid overrun of the Baltic states-- Publisher's web site.

A Dictionary of Military Quotations Trevor

Royle, 2021-05-30 This book, first published in 1990, is a provocative collection of military quotations that captures the human essence of warfare. From the skirmishes beneath the walls of Troy to the dropping of the atomic

bomb, nearly 3,500 quotations distil the experiences of generations of soldiers, depicting the preparation for and the waging of war. Read the words of field marshals and generals, kings and dictators, and follow them into battle – Alexander the Great at Issus, Wellington at Waterloo, Sitting Bull at Little Big Horn and Montgomery at El Alamein. Here too are the recorded details of life among the ranks as diverse as ammunition and uniform, sick parade and comradeship, discipline and ‘Dear John’ letters. A final section, ‘Last Post’, deals with the tragic aftermath of conflict.

Tupolev Tu-16 Badger Yefim Gordon, Vladimir Rigmant, 2004-06-21 The establishment of NATO posed the need for the Soviet war machine to create a fast jet bomber capable of reaching targets throughout Western Europe and combatting the carrier task forces with which the US Navy could throw its weight around the world. The basic Tu-16 which first flew in the mid-1950s was developed into nearly 50 versions adopted for various roles, including nuclear-capable bombers, anti-shipping missile strike aircraft, torpedo-bombers and minelayers, numerous reconnaissance and ECM variants, assorted development aircraft for testing new engines, avionics and systems. The Tu-16 even found civil uses as a fast mailplane and a weather research/rainmaking aircraft! The Badger, as the bomber was known to the West, served as the basis for the Soviet Union's first jet airliner, the Tu-104. The nearly 1,500 Tu-16s built in the Soviet Union were an important factor in preventing all-out military confrontation between the East and the West. Since the mid-1950s and until the 1980s the Badger has been a regular picture on the pages of the Western press, snooping around Western naval groups every now and then. The type also had its share of 'hot' wars, getting its baptism of fire in the Six-Day War of 1967.

Apart from three factories in the USSR, the Tu-16 was built under license in China as the H-6 and remains in service with the People's Liberation Army Air Force. Other foreign users were Egypt, Indonesia and Iraq. All known versions are described and a full account is given of the Tu-16's operational career in the USSR and abroad during the Cold War and in the days after that when many of the surviving Badgers were used as target drones. The book features many previously unpublished photos and a detailed production list.
