Unconventional Flying Objects Hill, Paul R.,2014-06-01 Paul Hill was a well-respected NASA scientist when, in the early 1950s, he had a UFO sighting. Soon after, he built the first flying platform and was able to duplicate the UFO's tilt-to-control maneuvers. Official policy, however, prevented him from proclaiming his findings. I was destined, says Hill, to be as unidentified as the flying objects. For the next twenty-five years, Hill acted as an unofficial clearinghouse at NASA, collecting and analyzing sightings' reports for physical properties, propulsion possibilities, dynamics, etc. To refute claims that UFOs defy the laws of physics, he had to make technological sense... of the unconventional object. After his retirement from NASA, Hill finally completed his remarkable analysis. This book, published posthumously, presents his findings that UFOs obey, not defy, the laws of physics. Vindicating his own sighting and thousands of others, he proves that UFO technology is not only explainable, but attainable.

Aircraft DK,2022-04-26 Take an action-packed flight through the history of aircraft and discover the intrepid pioneers who made a dream reality Uncover the engineering behind more than 800 aircraft models, from military jets to commercial planes. This visual history book captures the fascinating story of airplanes and aviation, and how their groundbreaking discovery has influenced the 21st Century. Inside the pages of this aircraft book, you'll discover: • The history of military and commercial aircraft from all over the world, decade by decade, to the present day in stunning visual detail • Comprehensive catalogs highlight the most important aircraft of each period along with their specifications and unique features • Showcases on particularly celebrated aircraft – such as the Supermarine Spitfire and Concorde – in beautifully photographed “virtual tour” features • The stories of the engineers and manufacturers that created marques like Boeing and Airbus Take to the skies Modern flight has opened the world up to new opportunities and paved the way for the development of advanced research and technology. But, what made it so groundbreaking? This book uncovers the stories behind the first airplane models, the development of flight, and brings you to present-day marvels such as the Gypsy Moth and Supermarine Spitfire. The Aircraft Book is filled with stats, facts, and photographs that create a visual tour and allows you to see inside key commercial and military aircraft models from the exterior to the cockpit. Aviation enthusiasts will also be captivated by the manufacturer of aircraft engines and how famous models like Boeing and Lockheed became household names. Love history? Discover even more with DK! DK's The Definitive Visual History series is an iconic celebration of design and history. Packed with fascinating facts and statistics, these high-quality visual guides cover everything from history and notable designs to the people and technology that made it possible. Books in this series include The Car Book, The Train Book, The Tank Book, and so much more.

Gotterdammerung - Luftwaffe Wrecks and Relics Brett Green,2006 Many of the photographs in this book were taken by advancing Allied troops in North Africa and Europe from 1942 onwards, others show aircraft shot down over England or come from Germany after the collapse of the Third Reich. They therefore form a valuable repository of information on aircraft, often from lesser-known units, at various stages of the War.

Black Aces High Robert K. Wilcox,2004-03-13 The author of *Scream of Eagles* pens a riveting account of a modern fighter squadron at war and the exploits, triumphs, and traumas of its pilots. A fast-moving look behind the scenes.--Publishers Weekly. 8-page photo insert. Martin's Press.

The Aviation History Relly Victoria Petrescu,Florian Ion Petrescu,2013-02 According to Aulus Gellius, Archytas, the Ancient Greek philosopher, mathematician, astronomer, statesman, and strategist, was reputed to have designed and built, around 400 BC, the first artificial, self-propelled flying device, a bird-shaped model propelled by a jet of what was probably steam, said to have actually flown some 200 metres. This machine, which its inventor called The Pigeon, may have been suspended on a wire or pivot for its flight. The 9th century Muslim Berber inventor, Abbas Ibn Firnas's glider is considered by John Harding to be the first attempt at heavier-than-air flight in aviation history. In 1010 AD an English monk, Eilmer of Malmesbury purportedly piloted a primitive gliding craft from the tower of Malmesbury Abbey. Eilmer was said to have flown over 200 yards (180 m) before landing, breaking both his legs. He later remarked that the only reason he did not fly further was because he forgot to give it a tail, and he was about to add one when his concerned Abbot forbade him any further experiments. Bartolomeu de Gusmão, Brazil and Portugal, an experimenter with early airship designs. In 1709 demonstrated a small airship model before the Portuguese court, but never succeeded with a full-scale model. Pilâtre de Rozier, Paris, France, first trip by a human in a free-flying balloon (the Montgolfière), built by Joseph-Michel and Jacques-Étienne Montgolfier, . 9 km covered in 25 minutes on October 15, 1783. (see Le Globe below for first unmanned flight, 2 months earlier) Professor Jacques Charles and Les Frères Robert, two French brothers, Anne-Jean and Nicolas-Louis, variously shared three milestones of pioneering flight: Le Globe, the first unmanned hydrogen gas balloon flew on 26 August 1783. On 1 December 1783 La Charlière piloted by Jacques Charles and Nicolas-Louis Robert made the first manned hydrogen balloon flight. In 1951, the Lockheed XFV-1 and the Convair XFY tailsitters were both designed around the Allison YT40 turboprop engine drivin

Camshaft Precision Florian Ion Petrescu,Relly Victoria Petrescu,2012 In the first chapter the authors present an original method to calculate the efficiency of the cams mechanisms. The second chapter presents an original method in determining a general, dynamic and differential equation for the motion of machines and mechanisms, particularized for the mechanisms with rotation cams and followers. The third chapter presents an original method to determine the general dynamics of mechanisms with rotation cams and followers, particularized to the plate translated follower. First, it presents the dynamics kinematics. Then it solves the Lagrange equation and using an original dynamic model with one degree of freedom, with variable internal amortization, it makes the dynamic analysis. The fourth chapter briefly presents an original method for determining the dynamics of mechanisms with rotation cam and translated follower with roll. First, one presents the dynamics kinematics. Then one performs the dynamic analysis of a few models, for some movement laws, imposed on the follower, by the designed cam profile. The fifth chapter presents an original methods to determine the dynamic parameters at the classic distribution, and a new method is presented in the sixth chapter. The seventh chapter presents an original methods to determine the dynamic parameters at the camshaft with rotary cam and translated follower with roll.

Hitler's Flying Saucers Henry Stevens,2012-11-29 WWII expert Stevens shows us the incredible and suppressed technology of the Third Reich and their desire to create highly advanced “wingless” aircraft-yes, flying saucers! Learn why the Schriever-Habermohl project was actually two projects and read the written statement of a German test pilot who actually flew one of these saucers; about the Leduc engine, the key to Dr. Miethes saucer designs; how

US government officials kept the truth about foo-fighters hidden for almost sixty years and how they were finally forced to come clean about the German origin of foo fighters. Learn of the Peenemuende saucer project and how it was slated to go atomic. Read the testimony of a German eyewitness who saw magnetic discs. Read the U.S. governments own reports on German field propulsion saucers. Read how the post-war German KM-2 field propulsion rocket worked. Learn details of the work of Karl Schappeller and Viktor Schauberger. Learn how their ideas figure in the quest to build field propulsion flying discs. Find out what happened to this technology after the war. Find out how the Canadians got saucer technology directly from the SS. Find out about the surviving Third Power of former Nazis. Learn of the US government’s methods of UFO deception and how they used the German Sonderbueroll as the model for Project Blue Book.

Counterland Operations United States United States Air Force,2015-02-14 In war, defeating an enemy's force is often a necessary step on the path to victory. Defeating enemy armies is a difficult task that often comes with a high price tag in terms of blood and treasure. With its inherent speed, range, and flexibility, air and space power offers a way to lower that risk by providing commanders a synergistic tool that can provide a degree of control over the surface environment and render enemy forces ineffective before they meet friendly land forces. Modern air and space power directly affects an adversary's ability to initiate, conduct, and sustain ground combat.

The F-35 Joint Strike Fighter Program Nigel C. Terra,2015 The largest procurement program in the Department of Defense (DOD), the F-35 Joint Strike Fighter (JSF), also called the Lightning II, is a strike fighter aircraft being procured in different versions for the United States Air Force, Marine Corps, and Navy. The F-35 Lightning II is intended to replace a variety of existing aircraft in the Air Force, Navy, and Marine Corps, while providing the most supportable, technologically advanced, lethal, and survivable aircraft to date. The F-35 is DOD's most expensive weapon system. This book addresses F-35 program performance during 2012, including testing, technical risks, and software; manufacturing performance indicators, production results, and design changes; and acquisition and sustainment costs going forward. This book also addresses the extent to which DOD has developed an F-35 sustainment strategy and addressed potential risks related to affordability and operational readiness; and developed a reliable O&S cost estimate for the program's life cycle.

To Build a Better World Philip Zelikow,Condoleezza Rice,2019-09-10 A deeply researched international history and exemplary study (New York Times Book Review) of how a divided world ended and our present world was fashioned, as the world drifts toward another great time of choosing. Two of America's leading scholar-diplomats, Philip Zelikow and Condoleezza Rice, have combed sources in several languages, interviewed leading figures, and drawn on their own firsthand experience to bring to life the choices that molded the contemporary world. Zeroing in on the key moments of decision, the might-have-beens, and the human beings working through them, they explore both what happened and what could have happened, to show how one world ended and another took form. Beginning in the late 1970s and carrying into the present, they focus on the momentous period between 1988 and 1992, when an entire world system changed, states broke apart, and societies were transformed. Such periods have always been accompanied by terrible wars -- but not this time. This is also a story of individuals coping with uncertainty. They voice their hopes and fears. They try out desperate improvisations and careful designs. These were leaders who grew up in a postwar world, who tried to fashion something better, more peaceful, more prosperous, than the damaged, divided world in which they had come of age. New problems are putting their choices, and the world they made, back on the operating table. It is time to recall not only why they made their choices, but also just how great nations can step up to great challenges. Timed for the thirtieth anniversary of the fall of the Berlin Wall, To Build a Better World is an authoritative depiction of contemporary statecraft. It lets readers in on the strategies and negotiations, nerve-racking risks, last-minute decisions, and deep deliberations behind the dramas that changed the face of Europe -- and the world -- forever.

Missile Defense and Defeat Thomas Karako,2017-03-24 The National Defense Authorization Act of 2016 mandates a review of missile defeat policy, strategy, and capability to be completed by January 2018. This upcoming Missile Defeat Review (MDR) represents an opportunity for the Trump administration to articulate a vision for the future of air and missile defense. This collection of expert essays explores how the strategic environment for missile defense and defeat has evolved since 2010 and offers recommendations to help guide and inform the MDR’s development.
