Karen Redrobe

**The History of Science and Technology** Bryan H. Bunch, Alexander Hellemans, 2004 In this age of genetic engineering and global warming, it is more important than ever to understand the history and current trends of science and technology. With so much information out there, though, it's hard to know where to start. That's where *The History of Science and Technology* -- the most comprehensive and up-to-date chronology of its kind -- comes in. From the first stone tools to the first robot surgery, this easy-to-read, handy reference book offers more than seven thousand concise entries organized within ten major historical periods and categorized by subject, such as archaeology, biology, computers, food and agriculture, medicine and health, materials, and transportation. You can follow the world's scientific and technological feats forward or backward, year by year, and subject by subject. Under 8400 BCE Construction, you will discover that the oldest known wall was built in Jericho. Jump to 1454 Communication and you will learn about Johann Gutenberg's invention of movable type. Take an even larger leap to 2002 Computers and find out about the invention of the Earth Simulator, a Japanese supercomputer. *The History of Science and Technology* answers all the what, when, why, and how questions about our world's greatest discoveries and inventions: How are bridges built? When were bifocal eyeglasses invented and by whom? What medical discovery led to the introduction of sterilization, vaccines, and antibiotics? What is the PCR (polymerase chain reaction) process, and why is it one of the pillars of the biotechnology revolution? Not only can you discover how our world came to be and how it works, but with cross-referenced entries you can also trace many intricate and exciting connections across time. Highly browsable yet richly detailed, expertly researched and indexed, *The History of Science and Technology* is the perfect desktop reference for both the science novice and the technologically advanced reader alike.

**Digital Art through the Looking Glass** Oliver Grau (Hg.), 2019-12-11 Digital art challenges archiving, collecting and preserving methods within and outside of gallery, library, archive and museum (GLAM) institutions. By its media, art in the digital sphere is processual, contextual, modular and ephemeral, and its creative process is collaborative. From artists, scholars, technicians and conservators—to preserve this contemporary art is a transdisciplinary task. This book brings together leading international experts from digital art theory and preservation, digital humanities, collection management, conservation and media art histories. In a transdisciplinary approach, theoretic and practice-based research from these stakeholders in art, research, education and exhibition are presented to create an overview of present preservation methods and discuss demands and opportunities for the future. Finally, the need for a new appropriate museum and archive infrastructure is shown to preserve the art of our time.

**Historical Dictionary of International Intelligence** Nigel West, 2015-05-21 Intelligence is now acknowledged as the hidden dimension to international diplomacy and national security. It is the hidden piece of the jigsaw puzzle of global relations that cements relationships, undermines alliances and topples tyrants, and after many decades of being deliberately overlooked or avoided, it is now regarded as a subject of legitimate study by academics and historians. This second edition of *Historical Dictionary of International Intelligence* covers its history through a chronology, an introductory essay, and an extensive bibliography. The dictionary section has over 500 cross-referenced entries on espionage techniques, categories of agents, crucial operations spies, defectors, moles, double and triple agents, and the tradecraft they apply. This book is an excellent access point for students, researchers, and anyone wanting to know more about the international intelligence.

*The Museum of Science and Art* Dionysius Lardner, 1859

*The Boy's Playbook of Science* John Henry Pepper, 1866

**Thinking about the Unthinkable** Herman Kahn, 1968

**A Topology of Everyday Constellations** Georges Teyssot, 2013-02-22 The threshold as both boundary and bridge: investigations of spaces, public and private, local and global. Today, spaces no longer represent a bourgeois haven; nor are they the sites of a classical harmony between work and leisure, private and public, the local and the global. The house is not merely a home but a position for negotiations with multiple spheres—the technological as well as the physical and the psychological. In *A Topology of Everyday Constellations*, Georges Teyssot considers the intrusion of the public sphere into private space, and the blurring of notions of interior, privacy, and intimacy in our societies. He proposes that we rethink design in terms of a new definition of the practices of everyday life. Teyssot considers the door, the window, the mirror, and the screen as thresholds or interstitial spaces that divide the world in two: the outside and the inside. Thresholds, he suggests, work both as markers of boundaries and as bridges to the exterior. The stark choice between boundary and bridge creates a middle space, an in-between that holds the possibility of exchanges and encounters. If the threshold no longer separates public from private, and if we can no longer think of the house as a bastion of privacy, Teyssot asks, does the body still inhabit the house—or does the house, evolving into a series of microdevices, inhabit the body?

**Art Au Tournant de L'an 2000** Uta Grosenick, Burkhard Riemschneider, Lars Bang Larsen, 1999 An illustrated survey (A-Z) of 137 international artists active during the 1980s and 90s.

*Paper Peepshows* Ralph Hyde, 2015 David Gestetner founded the firm of Gestetner in London in 1881. It was continued in the 20th century by his son Sigmund, and then by his grandsons Jonathan and David (dust jacket page [4]).

**Caravaggio** Sybille Ebert-Schifferer, 2012-06-05 The young Michelangelo Merisi da Caravaggio (1571-1610) created a major stir in late-sixteenth-century Rome with the groundbreaking naturalism and highly charged emotionalism of his paintings. One might think, given the vast number of books that have been written about him, that everything that could possibly be said about the artist has been said. However, the author of this book argues, it is important to take a fresh look at the often repeated and widely accepted narratives about the artist's life and work. Sybille Ebert-Schifferer subjects the available sources to a critical reevaluation, uncovering evidence that the efforts of Caravaggio's contemporaries to disparage his character and his artwork often sprang from their own cultural biases or a desire to promote the artistic achievements of his rivals. Contrary to repeated claims in the literature, the painter lacked neither education nor piety, but was an extremely accomplished technician who developed a successful marketing strategy. He enjoyed great respect and earned high fees from his prestigious clients while he also inspired a large circle of imitators. Even his brushes with the law conformed to the behavioral norms of the aristocratic Romans he sought to emulate. The beautiful reproductions of Caravaggio's paintings in this volume make clear why he captivated the imagination of his contemporaries, a reaction that echoes today in the ongoing popularity of his work and the fierce debate that it continues to provoke among art historians.

*Catastrophe - what Comes After the End?* Stefanie Plappert, 2021

**The Address of the Eye** Vivian Sobchack, 2020-05-05 Cinema is a sensuous object, but in our presence it becomes also a sensing, sensual, sense-making subject. Thus

argues Vivian Sobchack as she challenges basic assumptions of current film theory that reduce film to an object of vision and the spectator to a victim of a deterministic cinematic apparatus. Maintaining that these premises ignore the material and cultural-historical situations of both the spectator and the film, the author makes the radical proposal that the cinematic experience depends on two viewers viewing: the spectator and the film, each existing as both subject and object of vision. Drawing on existential and semiotic phenomenology, and particularly on the work of Merleau-Ponty, Sobchack shows how the film experience provides empirical insight into the reversible, dialectical, and signifying nature of that embodied vision we each live daily as both mine and another's. In this attempt to account for cinematic intelligibility and signification, the author explores the possibility of human choice and expressive freedom within the bounds of history and culture.

An Introduction to Science and Technology Studies Sergio Sismondo,2011-08-17 An Introduction to Science and Technology Studies, Second Edition reflects the latest advances in the field while continuing to provide students with a road map to the complex interdisciplinary terrain of science and technology studies. Distinctive in its attention to both the underlying philosophical and sociological aspects of science and technology Explores core topics such as realism and social construction, discourse and rhetoric, objectivity, and the public understanding of science Includes numerous empirical studies and illustrative examples to elucidate the topics discussed Now includes new material on political economies of scientific and technological knowledge, and democratizing technical decisions Other features of the new edition include improved readability, updated references, chapter reorganization, and more material on medicine and technology

*Crash* Karen Redrobe,2010-08-03 Artists, writers, and filmmakers from Andy Warhol and J. G. Ballard to Alejandro González Iñárritu and Ousmane Sembène have repeatedly used representations of immobilized and crashed cars to wrestle with the conundrums of modernity. In *Crash*, Karen Beckman argues that representations of the crash parallel the encounter of film with other media, and that these collisions between media offer useful ways to think about alterity, politics, and desire. Examining the significance of automobile collisions in film genres including the “cinema of attractions,” slapstick comedies, and industrial-safety movies, Beckman reveals how the car crash gives visual form to fantasies and anxieties regarding speed and stasis, risk and safety, immunity and contamination, and impermeability and penetration. Her reflections on the crash as the traumatic, uncertain moment of inertia that comes in the wake of speed and confidence challenge the tendency in cinema studies to privilege movement above film’s other qualities. Ultimately, Beckman suggests that film studies is a hybrid field that cannot apprehend its object of study without acknowledging the ways that cinema’s technology binds it to capitalism’s industrial systems and other media, technologies, and disciplines.

*The Virtual Life of Film* D. N. RODOWICK,David Norman Rodowick,2009-06-30 As almost every aspect of making and viewing movies is replaced by digital technologies, even the notion of watching a film is fast becoming an anachronism. With the likely disappearance of celluloid film stock as a medium, and the emergence of new media, what will happen to cinema--and to cinema studies? In the first of two books exploring this question, Rodowick considers the fate of film and its role in the aesthetics and culture of the twenty-first century.

*Architecture's Desire* K. Michael Hays,2009-10-02 Theorizes an architectural ethos of extreme self-reflection and finality from a Lacanian perspective. While it is widely recognized that the advanced architecture of the 1970s left a legacy of experimentation and theoretical speculation as intense as any in architecture's history, there has been no general theory of that ethos. Now, in *Architecture's Desire*, K. Michael Hays writes an account of the “late avant-garde” as an architecture systematically twisting back on itself, pondering its own historical status, and deliberately exploring architecture's representational possibilities right up to their absolute limits. In close readings of the brooding, melancholy silence of Aldo Rossi, the radically reductive “decompositions” and archaeologies of Peter Eisenman, the carnivalesque excesses of John Hejduk, and the “cinegrammatic” delirium of Bernard Tschumi, Hays narrates the story of architecture confronting its own boundaries with objects of ever more reflexivity, difficulty, and intransigence. The late avant-garde is the last architecture with philosophical aspirations, an architecture that could think philosophical problems through architecture rather than merely illustrate them. It takes architecture as the object of its own reflection, which in turn produces an unrelenting desire. Using the tools of critical theory together with the structure of Lacan's triad imaginary-symbolic-real, Hays constructs a theory of architectural desire that is historically specific and yet sets the terms and the challenges of all subsequent architectural practice, including today's.

A Passion for Films Richard Roud,1999 Richard Roud has brought to life a man as picturesque and as contradictory as a Dickens character... Thanks to Roud... a thick and well-kept-up curtain of mystery rises to reveal to us the founder of the Cinematheque Francaise, a man who was both unassuming and extravagant, a fabulous man, an obsessed man, and man animated by an idee fixe, a haunted man. -- Francois Truffaut, from the Foreword When Henri Langlois began collecting prints of films in the 1920s, most people -- even many in the film industry -- thought of movies as a cheap and disposable form of entertainment. Langlois recognized them as a priceless form of art and worthy of preservation. In 1935, he founded the Cinematheque Francaise, the legendary film library and screening room in Paris which Jean Renoir described as the church for movies and Bernardo Bertolucci called the best school of cinema in the world. Indeed, some of the world's most influential filmmakers -- including Godard, Resnais, Truffaut, Rivette, and Wenders -- learned their craft by watching the classic films Langlois devoted his life to saving from destruction and obscurity. As Richard Roud reveals in this affectionate, intriguing biography ( Times Literary Supplement), Langlois was a brilliant and temperamental man who could be, by turns, charming and maddening. Marvelously creative, Langlois was also so incredibly disorganized that, once the Cinematheque became a government institution, he was dismissed as its director in 1968 by then Minister of Culture Andre Malraux, an action which caused Europe's eminent film personalities to protest in the street of Paris until he was reinstated. By the time of his death in 1977, Langlois's genius for rediscovering the cinema of the past (he championed the works of Abel Gance, Carl Dreyer, and Louis Feuillade when they were considered passe by his contemporaries and defended Howard Hawks against the disdain of American intellectuals) and his desire to share his discoveries with the world (at a time when other film archives refused to screen any of the films in their collection) had inspired a great and abiding love of cinema in a generation of filmgoers, leaving behind a legacy director Nicholas Ray considered perhaps the most important individual effort ever accomplished in the history of the cinema.
