*Garden of Thorns* Amber Mitchell, 2017-03-06 "A tense, fast-paced fantasy." —Taylor Fenner, author of *The Haunting Love* After seven grueling years of captivity in the Garden—a burlesque troupe of slave girls—sixteen-year-old Rose finds an opportunity to escape during a performance for the emperor. But the hostage she randomly chooses from the crowd isn't one of the emperor's men—not anymore. He's the former heir to the throne...and is now leading a rebellion against it. Rayce is a wanted man and dangerously charismatic. He's the worst person for Rose to get involved with, no matter what his smile promises. Assuming the hostage-taking is part of the emperor's plot to crush the rebellion, he decides to take Rose as his hostage instead. Now Rose must prove where her loyalties lie, so she offers Rayce a deal—if he helps her rescue the other

girls, she'll tell him all the Garden's secrets. Well, almost all. Because there's one secret she's been keeping these seven years...and she'll take it to the grave. The Garden of Thorns series is best enjoyed in order: Book #1 Garden of Thorns Book #2 War of the Wilted Book #3 Roots of Ruin

**Making Comics** Lynda Barry, 2019-09-10 The

idiosyncratic curriculum from the Professor of Interdisciplinary Creativity will teach you how to draw and write your story Hello students, meet Professor Skeletor. Be on time, don't miss class, and turn off your phones. No time for introductions, we start drawing right away. The goal is more rock, less talk, and we communicate only through images. For more than five years the cartoonist Lynda Barry has been an associate professor in the University of Wisconsin-Madison art department and at the Wisconsin Institute for Discovery, teaching students from all majors, both graduate and undergraduate, how to make comics, how to be creative, how to not think. There is no academic lecture in this classroom. Doodling is enthusiastically encouraged. Making Comics is the follow-up to Barry's bestselling Syllabus, and this time she shares all her comics-making exercises. In a new hand-drawn syllabus detailing her creative curriculum, Barry has students drawing themselves as monsters and superheroes, convincing students who think they can't draw that they can, and, most important, encouraging them to understand that a daily journal can be anything so long as it is hand drawn. Barry teaches all students and believes everyone and anyone can be creative. At the core of Making Comics is her certainty that creativity is vital to processing the world around us.

**Introductory Grammar of Amharic** Wolf Leslau, 2000

This book closes the gap for beginners who want to study the Amharic language and had difficulties in finding the right grammar for this purpose: The first grammar of Amharic, the national language of Ethiopia, was published by Hiob Ludolf in 1698. The Amharic grammar published by Praetorius in 1879 is based on Amharic religious texts and on scattered material, usually composed by missionaries. A milestone in the study of Amharic is Marcel Cohen's *Traite*

de langue amharique (1936), but this grammar, too is not completely suited for beginners since the author's generalizations are at times aimed at linguists. The grammar that comes closest to the concept of a beginner's grammar is that of C.H. Dawkin (1960), yet this grammar is extremely short, does not give examples and does not introduce the student to the intricacies of the language. The new book gives all the grammatical forms and the sentences of the present grammar in Amharic script and in phonetic transcription. The illustrative examples have a free and a literal translation. This procedure should likewise prove to be useful for the Semitist as well as for the general linguist.

Cells of the Immune System Ota Fuchs, Seyyed Shamsadin Athari, 2020-05-13 The cells of the immune system are lymphocytes (T-cells, B-cells and NK (natural killer) cells), neutrophils, eosinophils, and monocytes/macrophages. This book is an overview of some types of these cells and their role in recognizing and/or reacting against foreign material. The immune system is characterized by collaboration between cells and proteins. The development of all cells of the immune system begins in the bone marrow with a hematopoietic stem cell. Two chapters deal with neutrophils, three chapters with T-cells, four chapters with eosinophils, and other chapters review the immunomodulation of macrophages, the role of transcription factor KLF4 in regulating plasticity of myeloid-derived suppressor cells, immune reconstitution after allogeneic hematopoietic stem cell transplantation, and role of sorption detoxification in the therapy of acute radiation sickness.
