The Nature of Code Daniel Shiffman, 2024-09-03 All aboard The Coding Train! This beginner-friendly creative coding tutorial is designed to grow your skills in a fun, hands-on way as you build simulations of real-world phenomena with “The Coding Train” YouTube star Daniel Shiffman. How can we use code to capture the unpredictable properties of nature? How can understanding the mathematical principles behind our physical world help us create interesting digital environments? Written by “The Coding Train” YouTube star Daniel Shiffman, The Nature of Code is a beginner-friendly creative coding tutorial that explores a range of programming strategies for developing computer simulations of natural systems—from elementary concepts in math and physics to sophisticated machine-learning algorithms. Using the same enthusiastic style on display in Shiffman’s popular YT channel, this book makes learning to program fun, empowering you to generate fascinating graphical output while refining your problem-solving and algorithmic-thinking skills. You’ll progress from building a basic physics engine that simulates the effects of forces like gravity and wind resistance, to creating evolving systems of intelligent autonomous agents that can learn from their mistakes and adapt to their environment. The Nature of Code introduces important topics such as: Randomness Forces and vectors Trigonometry Cellular automata and fractals Genetic

algorithms Neural networks Learn from an expert how to transform your beginner-level skills into writing well-organized, thoughtful programs that set the stage for further experiments in generative design. NOTE: All examples are written with p5.js, a JavaScript library for creative coding, and are available on the book's website.

Mighty Fitz Michael Schumacher,2008-12-01 The

disappearance of the Edmund Fitzgerald remains one of the great unsolved mysteries in maritime history. Michael Schumacher relays in vivid detail the story of the Edmund Fitzgerald, its many productive years on the waters of the Great Lakes, its tragic demise, the search effort and investigation, as well as the speculation and the controversy that followed in the wake of the disaster. Michael Schumacher is the author of six books. He has written 25 documentaries on Great Lakes shipwrecks, including three about the Edmund Fitzgerald. In his ballad, Mr. Lightfoot sang about the Fitz's final tense moments, when the waves turn minutes to hours: Now the hours have lengthened into years and years into decades-but the allure of this doomed ship and its missing men remains as strong as ever.-Wall Street Journal

Insights are provided by an international team of pre-eminent experts into the processing of multispectral and hyperspectral face images captured under uncontrolled environments. These discussions cover a variety of imaging sensors ranging from state-of-the-art visible and infrared imaging sensors, to RGB-D and mobile phone image sensors. A range of different biometric modalities are also examined, including face, periocular and iris. This timely volume is a mine of useful information for researchers, practitioners and

students involved in image processing, computer vision, biometrics and security.

Profiles in Operations Research Arjang A. Assad, Saul I. Gass, 2011-06-28 Profiles in Operations Research: Pioneers and Innovators recounts the development of the field of Operations Research (OR), the science of decision making. The book traces the development of OR from its military origins to a mature discipline that is recognized worldwide for its contributions to managerial planning and complex global operations. Over the past six decades, OR analyses have impacted our daily lives: when making an airline or hotel reservation, waiting in line at a bank, getting the correctly blended fuel at the gas station, and ensuring that the book you are holding arrived at its destination on time. OR originated in the late 1930s when British scientists from various disciplines joined Royal Air Force officers to determine the most effective way to employ new radar technology for intercepting enemy aircraft. During World War II, similar applied research groups were formed to study, test, and evaluate military operations on both sides of the Atlantic. Their work resulted in great improvements—OR helped the Allies win the war. The scientific field that emerged from these studies was called operational research in the U.K. and operations research in the U.S. Today, OR provides a broad and powerful science to aid decision making. Profiles describes the lives and contributions of 43 OR pioneers and innovators and relates how these individuals, with varying backgrounds and diverse interests, were drawn to the nascent field of OR. The profiles also describe how OR techniques and applications expanded considerably beyond the military context to find new domains in business and industry. In addition to their scientific contributions, these profiles capture the life stories of the individuals—interwoven with personal tales, vivid vignettes, family backgrounds, and views of the mission and future of OR. Collectively, the profiles recount the fascinating story of the growth and development of a field enriched by the

convergence of different disciplines. The Editors: Arjang A. Assad is Dean of the School of Management, University at Buffalo, State University of New York. Saul I. Gass is Professor Emeritus, Department of Decision, Operations & Information Technologies, Smith School of Business, University of Maryland, College Park. From the Reviews Profiles In Operations Research: Pioneers and Innovators. Book Review by Nigel Cummings: U.K. OR Society's e-journal, Inside OR., Sept 2011. I can thoroughly recommend this book. I found it both enlightening and undeniably gripping, so much so in fact, you may find it difficult to put it down once you have commenced reading it. Arjang A. Assad and Saul I. Gass have created a masterwork which will serve to immortalise [stet] the pioneers of O.R. for many years to come. *For a list of all known typos, plus further discussion on the book, please visit <http://profilesinoperationsresearch.com>.

Music Scenes Andy Bennett, Richard A. Peterson, 2004 While

more than 80 percent of the world's commercial music is controlled by four multinational firms, most music is made and enjoyed in diverse situations divorced from such corporate behemoths. These fourteen original essays examine the fascinating world of music scenes, those largely inconspicuous sites where clusters of musicians, producers, and fans explore their common musical tastes and distinctive lifestyle choices. Although most music scenes come and go with hardly a trace, they nevertheless give immense satisfaction to their participants, and a few - New York bop jazz, Merseybeat, Memphis rockabilly, London punk, Bronx hiphop - achieve fame and spur musical innovations. To date, serious study of the scenes phenomenon has focused mainly on specific music scenes while paying less attention to recurrent dynamics of scene life, such as how individuals construct and negotiate scenes to the various activities. This volume remedies that neglect. The editors distinguish between three types of scenes - local, translocal, and virtual - which provide the organizing framework for the essays. Aspects of local scenes, which are confined to specific areas, are explored through essays on Chicago blues, rave, karaoke, teen pop, and salsa. The section on translocal scenes, which involve the coming together of scattered local scenes around a particular type of music and lifestyle, includes articles on Riot Grrrls, goths, art music, and anarcho-punk. Aspects of virtual scenes, in which fans communicate via the internet, are illustrated using alternative country, the Canterbury sound, postrock, and Kate Bush fans. Also included is an essay that shows how the social conditions in places where jazz was made influenced that music's development.

Hokusai Seiji Nagata, Hokusai Katsushika, 1999 An introduction to the life and art of Japan's famous artist export, Hokusai, written by the curator of the Ota Memorial Museum in Tokyo. The book contains a commentary on the artist's life and work, and details outlining composition and technique. Hokusai is

perhaps the Asian artist best known in the West. His influence has extended from the Impressionists to later modern art and even to commercial design. A few of his works are so frequently reproduced that they are almost as familiar as the face of the Mona Lisa. Yet the 'Great Wave' and the 'Red Fuji' from the

Graphics for Architecture Kevin Forseth, 1991-01-16
Graphics for Architecture Kevin Forseth with David Vaughan A thorough understanding of design drawing enhances the designer's ability to reason out difficult graphic constructions and to select or create appropriate means for depicting buildings and environments. This fully illustrated guide presents the most effective methods for mechanically constructing architectural plans, elevations, sections, paralines, perspectives, and shadows. All methods are described in basic principles of perspective geometry. Throughout the volume many pictorial drawings illuminate the connection between step-by-step procedures for constructing design drawings and the abstract concepts underlying orthographic, oblique, and perspective projections. For formulating graphics work-book problems around paraline construction the guide includes a notation system for describing an unlimited range of paraline-oblique drawings. A shortcut method for casting shadows in plan and elevation is useful for modeling shadows in architectural site plans and for obtaining fast design results. In addition there are eight different step-by-step procedures for setting up and constructing one and two-point perspective. Common-method perspectives are presented in the context of a drafting-board surface, and perspectives without plan are discussed as interiors, exteriors, and sections. Combining carefully organized learning sequences with the quick reference qualities of a handbook, this volume is an excellent reference source for the architectural office or studio as well as an easy-to-follow manual for students.
