Papertoy Monsters Brian Castleforte,2010-12-29 A breakthrough paper-folding book for kids—paper airplanes meet Origami meets Pokemon. Papertoys, the Internet phenomenon that's hot among graphic designers and illustrators around the world, now comes to kids in the coolest new book. Created and curated by Brian Castleforte, a graphic designer and papertoy pioneer who rounded up 25 of the hottest papertoy designers from around the world (Indonesia, Japan, Australia, Italy, Croatia, Chile, even Jackson, Tennessee), Papertoy Monsters offers 50 fiendishly original die-cut designs that are ready to pop out, fold, and glue. The book interleaves card stock with paper stock for a unique craft package; the graphics are colorful and hip, combining the edginess of anime with the goofy fun of Uglydolls and other collectibles. Plus each character comes with its own back-story. And the results are delicious: meet Pharaoh Thoth Amon, who once ruled Egypt but is now a mummy who practices dark magic in his sarcophagus. Or Zumbie the Zombie, who loves nothing more than a nice plate of brains and yams. NotSoScary, a little monster so useless at frightening people that he has to wear a scary mask. Yucky Chuck, the lunchbox creature born in the deepest depths of your school bag. Plus Zeke, the monster under your bed, Nom Nom, eater of cities, and Grumpy Gramps, the hairy grandpa monster with his very own moustache collection.

From Cave Man to Cave Martian Manfred "Dutch" von Ehrenfried,2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

Philip's Planisphere (Latitude 51. 5 North) ,2012-01-06 Invaluable for both beginners and

advanced observers, Philip's Planisphere (Latitude 51.5 North) is a practical hour-by-hour tracker of the stars and constellations, designed for use anywhere in Britain and Ireland, Northern Europe, Northern USA and Canada. Turn the oval panel to the required date and time to reveal the whole sky visible from your location. The map, by the well-known celestial cartographer Wil Tirion, shows stars down to magnitude 5, plus several deep-sky objects, such as the Pleiades, the Andromeda Galaxy (M31) and the Orion Nebula (M42). Because the planets move round the Sun, their positions in the sky are constantly changing and they cannot be marked permanently on the map; however, the back of the planisphere has tables giving the positions of Venus, Mars, Jupiter and Saturn for every month until 2020. The planisphere is supplied in a full-colour wallet that contains illustrated step-by-step instructions for how to use the planisphere, how to locate planets, and how to work out the time of sunrise or sunset for any day of the year. It explains all the details that can be seen on the map - the magnitudes of stars, the ecliptic and the celestial coordinates. In addition, the section 'Exploring the skies, season by season' introduces the novice astronomer to the principal celestial objects visible at different times of the year. Major constellations are used as signposts to navigate the night sky, locating hard-to-find stars and some fascinating deep-sky objects. The movement of the stars is also explained.

A Third Order Differential Equation W. R. Utz,1955

Silent Sky Lauren Gunderson,2015-01-01 THE STORY: When Henrietta Leavitt begins work at the Harvard Observatory in the early 1900s, she isn't allowed to touch a telescope or express an original idea. Instead, she joins a group of women "computers," charting the stars for a renowned astronomer who calculates projects in "girl hours" and has no time for the women's probing theories. As Henrietta, in her free time, attempts to measure the light and distance of stars, she must also take measure of her life on Earth, trying to balance her dedication to science with family obligations and the possibility of love. The true story of 19th-century astronomer Henrietta Leavitt explores a woman's place in society during a time of immense scientific discoveries, when women's ideas were dismissed until men claimed credit for them. Social progress, like scientific progress, can be hard to see when one is trapped among earthly complications; Henrietta Leavitt and her female peers believe in both, and their dedication changed the way we understand both the heavens and Earth.

Standing Up to the Madness Amy Goodman,2008-05-01 Standing Up to the Madness not only is a timely, inspiring, and even revolutionary look at who wields the greatest power in America--everyday

people who take a chance and stand up for what they believe in--but also offers advice on what you can do to help. Where are the millions marching in the streets to defend human rights, civil liberties, and racial justice? Where is the mass revulsion against the killing and torture being carried out in our name? Where are the environmentalists? Where is the peace movement? The answer: They are everywhere. The award-winning sister-brother team of Amy Goodman, host of Democracy Now!, and investigative journalist David Goodman traveled the country to detail the ways in which grassroots activists have taken politics out of the hands of politicians. *Standing Up to the Madness* tells the stories of everyday citizens who have challenged the government and prevailed. As the Bush administration has waged war abroad and at home, it has catalyzed a vast groundswell of political action. From African-American residents of deluged New Orleans who are fighting racism and City Hall to regain their homes; to four Connecticut librarians who refused to spy on their patrons, challenged the USA PATRIOT Act, and won; to a group of high school students who were barred from performing a play they wrote on the Iraq War based on letters from soldiers; to the first U.S. Army officer to publicly refuse orders to deploy to Iraq, charging that his duty as an officer is to refuse to fight in an illegal and immoral war, *Standing Up to the Madness* profiles citizens rising to extraordinary challenges. And, in the process, they are changing the way that politics is done, both now and in the future. In communities around the United States, courageous individuals have taken leaps of faith to stop the madness. They could only hope that if they led, others would follow. That is how movements are born. What begins as one, eventually becomes many. In that tradition, the authors have included the ways in which any individual can take action and effect change.

Typographic Systems of Design Kimberly Elam, 2007-05-03 Typographic organization has always been a complex system in that there are so many elements at play, such as hierarchy, order of reading, legibility, and contrast. In *Typographic Systems*, Kim Elam, author of our bestselling books, *Geometry of Design* and *Grid Systems*, explores eight major structural frameworks beyond the grid including random, radial, modular, and bilateral systems. By taking the reader through exercises, student work, and professional examples, Elam offers a broad range of design solutions. Once essential visual organization systems are understood the designer can fluidly organize words or images within a structure, combination of structures, or a variation of a structure. With clarity and substance, each system from the structured axis to the nonhierarchical radial array is explained and explored so that the reader comes away with a better understanding of these intricate complex arrangements. *Typographic Systems* is the seventh title in our bestselling *Design Briefs* series, which

has sold more than 100,000 copies worldwide.

Historical Atlas of Early Railways Derek Hayes,2017 In a sense the very earliest railways were simply ruts caused by the passage of carts on softer ground. Railways of this nature may have been in use as early as 2200 BCE. But railways became a worldwide economic force only in the middle of the nineteenth century, some forty or fifty years after the first demonstration of a mechanically powered train. What radically changed--in the space of less than three decades--was the method of propulsion, from human or horse power to steam powered travelling engines, the forerunners of the modern railway locomotive. Such railways enabled faster, more efficient transport of people and goods, opened the world to settlement and changed the nature of war, allowing supplies and soldiers to be moved much faster than on horseback or on foot. *Historical Atlas of Early Railways* highlights the innovations, failures and most memorable moments of railways through the ages. Read about a variety of designs and inventions including the steam underground in 1863, rack and mountain railways, electric railways, monorails and atmospheric railways. Study the world's oldest surviving railway map. This newest addition to the popular Historical Atlas Series features 320 maps and 450 photos and other illustrations, and is a beautifully designed chronicle for anyone who has a fondness for history, maps or trains.
