Managing Nuclear Accidents Dominic Golding, 2021-11-28 In 1986, the Three Mile Island Public Health Fund commissioned a national team of researchers to prepare an alternative emergency plan for the region around the Three Mile Island nuclear power plant. This nontechnical book, addressed to emergency workers, the public and policymakers, presents the results of their research in the form of a bold plan that is applicable to any nuclear plant emergency. It builds on the principles that local knowledge is valuable, not unsophisticated, that communities are adaptive, not inflexible, and that information must be made available and accessible to the people who most need it.

Introduction to Nuclear Power Geoffrey F. Hewitt, John G. Collier, 2018-10-08 The authors of this text aim to educate the reader on nuclear power and its future potential. It focuses on nuclear accidents such as Chernobyl and Three Mile Island, and their consequences, with the understanding that there are safety lessons to be learned if nuclear power generation is going to be expanded to meet our growing energy needs.

Agricultural Implications of the Fukushima Nuclear Accident (III) Tomoko M. Nakanishi, Martin O'Brien, Keitaro Tanoi, 2019-01-30 This open access book presents the findings from on-site research into radioactive cesium contamination in various agricultural systems affected by the Fukushima Daiichi Nuclear Power Plant accident in March 2011. This third volume in the series reports on studies undertaken at contaminated sites such as farmland, forests, and marine and freshwater environments, with a particular focus on livestock, wild plants and mushrooms, crops, and marine products in those

environments. It also provides additional data collected in the subsequent years to show how the radioactivity levels in agricultural products and their growing environments have changed with time and the route by which radioactive materials entered agricultural products as well as their movement between different components (e.g., soil, water, and trees) within an environmental system (e.g., forests). The book covers various topics, including radioactivity testing of food products; decontamination trials for rice and livestock production; the state of contamination in, trees, mushrooms, and timber; the dynamics of radioactivity distribution in paddy fields and upland forests; damage incurred by the forestry and fishery industries; and the change in consumers' attitudes. Chapter 19 introduces a real-time radioisotope imaging system, a pioneering technique to visualize the movement of cesium in soil and in plants. This is the only book to provide systematic data on the actual change of radioactivity, and as such is of great value to all researchers who wish to understand the effect of radioactive fallout on agriculture. In addition, it helps the general public to better understand the issues of radio-contamination in the environment. The project is ongoing; the research groups from the Graduate School of Agricultural and Life Sciences of The University of Tokyo continue their work in the field to further evaluate the long-term effects of the Fukushima accident.

**Preparing For Nuclear Power Plant Accidents** Dominic Golding, Jeanne X Kasperson, Roger Kasperson, 1995 This book appraises the current understanding of nuclear power plant accidents and the challenges posed to emergency planners. The contributors address the crucial need for real-time monitoring of both the development of the accident and the dispersion of radiation into the atmosphere.

**Chernobyl - What Have We Learned?** Yasuo Onishi, Oleg V. Voitsekhovich, Mark J. Zheleznyak, 2007-06-03 This book presents a 20-year historical overview and comprehensive study results of the aquatic environment affected by the 1986 Chernobyl nuclear accident. The book analyzes water remediation actions, using current science and mathematical modeling, and discusses why some were successful, but many others failed. This book will interest engineers, scientists, decision-makers, and everyone involved in radiation protection and radioecology, environmental protection and risk assessment, water remediation and mitigation, and radioactive waste disposal.
