America's Fire Engine Walter M.P. McCall, Alan M. Craig, 2022-11-16 As World War II drew to a close, America's premier fire apparatus builder--the American-LaFrance Foamite Corp. of Elmira, N.Y.--bet the company's future on its radical new cab-ahead-of-engine 700 Series fire engines. In a spectacular gamble to capture the superheated postwar market, all of the company's existing products were discontinued and its customers were essentially told to take it or leave it. This bold gamble paid off and 700 Series rigs soon filled firehouses across the nation, sweeping aside all competitors and ultimately defining the breakthrough 700 as America's Fire Engine. This is the first comprehensive history of the game-changing 700. Individual chapters detail not only each of the eight major vehicle types but also the origins, design controversies, manufacturing, and marketing of the 700 and short-lived transitional 800 Series. The book includes a meticulously researched registry of every 700/800 series apparatus delivered, supported by many interpretive tables detailing production, specifications and major fire department fleets.

Transnational Japan in the Global Environmental Movement Simon Avenell, 2018-11-30

What motivates people to become involved in issues and struggles beyond their own borders? How are activists changed and movements transformed when they reach out to others a world away? This adept study addresses these questions by tying together local, national, regional, and global historical narratives surrounding the contemporary Japanese environmental movement. Spanning the era of Japanese industrial pollution in the 1960s and the more recent rise of movements addressing global environmental problems, it shows how Japanese activists influenced approaches to environmentalism and industrial pollution in the Asia-Pacific region, North America, and Europe, as well as landmark United Nations conferences in 1972 and 1992. Japan's experiences with diseases caused by industrial pollution produced a potent "environmental injustice paradigm" that fueled domestic protest and became the motivation for Japanese groups' activism abroad. From the late 1960s onward Japanese activists organized transnational movements addressing mercury contamination in Europe and North America, industrial pollution throughout East Asia, radioactive waste disposal in the Pacific, and global climate change. In all cases, they advocated strongly for the rights of pollution victims and people living in marginalized communities and nations—a position that often put them at odds with those advocating for the global environment over local or national rights. Transnational involvement profoundly challenged Japanese groups' understanding of and approach to activism. Numerous case studies demonstrate how border-crossing efforts undermined deeply engrained notions of victimhood in the domestic movement and nurtured a more self-reflexive and multidimensional approach to environmental problems and social activism. Transnational

Japan in the Global Environmental Movement will appeal to scholars and students interested in the development of civil society, social movements, and environmentalism in contemporary Japan; grassroots inter-Asian connections in the postwar period; and the ways Asian countries and their citizens have shaped and been influenced by global issues like environmentalism.

Intelligent Systems for Crisis Management Sisi Zlatanova, Rob Peters, Arta Dilo, Hans Scholten, 2012-12-03 There have been major advances in technologies to support crisis response in the last few years. However, many aspects related to the efficient collection and integration of geo-information, applied semantics and situation awareness for disaster management are still open. To advance the systems and make them intelligent, an extensive collaboration is required between emergency responders, disaster managers, system designers and researchers. To facilitate this process the Geo-information for Disaster Management (Gi4DM) conference has been organized since 2005. Gi4DM is coordinated by the Joint Board of Geospatial Information Societies (JB GIS) and the ad-hoc Committee on Risk and Disaster Management. This volume presents the results of the Gi4DM 2012 conference, held in Enschede, the Netherlands, on 13-15 December . It contains a selection of around 30 scientific and 25 best-practice peer-reviewed papers. The 2012 Gi4DM focuses on the intelligent use of geo-information, semantics and situation awareness.

New American TQM Shōji Shiba,Alan Graham,David Walden,1993-08 The benefits of applying TQM in manufacturing are well-known: eliminating product defects, enhancing product design, speeding delivery, and reducing costs. Most people readily agree with the basic premise of TQM, but how many have have been able to implement it successfully? What makes it so difficult for TQM to permeate a company? How can an approach to corporate management first develop in Japan take root and flourish in the very different corporate climate of the U.S.?

Dictionary of Disasters at Sea During Th F.L CHARLES HOCKING,1969 A mammoth and sobering record, listing the tragically frequent disasters at sea between 1824 and 1962. The book, though daunting in size, is easy to use, giving an alphabetical list of every ship lost, with the circumstances of the sinking, and the technical data of each ship: length, beam, tonnage, speed, propulsion etc. This fascinating work of reference should be on the shelves or in the cabin of any maritime enthusiast.

Four Practical Revolutions in Management Alan Graham,Shoji Shiba,David Walden,2001-04-24 In Four Practical Revolutions in Management: Systems for Creating Unique Organizational Capability, authors Shoji Shiba and David Walden significantly revise their classic text on leading management systems -- A New American TQM. This book is a comprehensive approach to business management that goes beyond business operations improvement. The authors demonstrate a program for establishing a sophisticated, state-

of-the-art management system that creates unique organizational capabilities. Containing new methodologies and case studies, the book is one of the most extensive in the management field and provides a step-by-step program for implementing leading management techniques. To create a successful management system, the authors argue that companies must be organized around four major areas of practice called the four revolutions. They are customer focus, continuous improvement, total participation, and societal networking. For each of the areas, the book presents proven methods that enable dynamic implementation strategies.

Customer Focus Any effective management system begins with the customer. Companies must learn to integrate a customer's concerns into their own. The book presents how to embrace the market-in concept and integrate the other skills in the book into a management strategy that focuses on the customer.

Continuous Improvement For a company to be successful in the 21st century, it must continually improve its processes to meet the ever-changing needs of the customer. This book introduces important tools for process discovery, management, and improvement. In the process, it moves beyond reactive improvement methods to proactive improvement efforts.

Total Participation The key to creating a dynamic management system is employee participation. Employees are the ones who work on the issues of quality and customer satisfaction on a daily basis. This book presents skills such as hoshin management, team-building, creating structures for mobilization, and leading change and breakthrough.

Societal Networking Besides a company's internal audience, another source of business improvement ideas is societal networking. This is the set of companies, customers, and suppliers associated with any organization, that can learn from the experiences of these

groups. To develop these valuable resources into a comprehensive management strategy, the book covers mutual learning methods, as well as keys for integrating various management methodologies. This book includes: Hoshin management PDCA (plan, do, check, act) cycle 7-step method of reactive improvement Proactive improvement to develop new products Engaging people in a changing environment Focused strategies for phase-in Leading process improvement The practice of breakthrough Over thirty thorough case studies
