On average, each experiment takes 5 to 10 minutes and the devotional is an additional 5 minutes. Our expert and guide, Dr. Phineas Einstein Fizzlebop, is a bit quirky and maybe a little cheesy at times, but he is passionate about three things: God, science, and fizz—and all come together wonderfully at Fizzlebop Labs. **Morphogenetic Engineering** René Doursat,Hiroki Sayama,Olivier Michel,2012-12-13 Generally, spontaneous pattern formation phenomena are random and repetitive, whereas elaborate devices are the deterministic product of human design. Yet, biological organisms and collective insect constructions are exceptional examples of complex systems that are both self-organized and architectural. This book is the first initiative of its kind toward establishing a new field of research, Morphogenetic Engineering, to explore the modeling and implementation of "self-architecturing" systems. Particular emphasis is placed on the programmability and computational abilities of self-organization, properties that are often underappreciated in complex systems science—while, conversely, the benefits of self-organization are often underappreciated in engineering methodologies. Altogether, the aim of this work is to provide a framework for and examples of a larger class of "self-architecturing" systems, while addressing fundamental questions such as br" How do biological organisms carry out morphogenetic tasks so reliably? br" Can we extrapolate their self-formation capabilities to engineered systems?br" Can physical systems be endowed with information (or informational systems be embedded in physics) so as to create autonomous morphologies and functions?br" What are the core principles and best practices for the design and engineering of such morphogenetic

systems?

**From Cave Man to Cave Martian** Manfred "Dutch" von Ehrenfried,2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a “Short Stay” Opposition Class mission to Mars as the first mission rather than the “Long Stay” concept requiring a mission that is too long, too dangerous and too costly for man’s first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is moreextensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.
