The Systems Model of Creativity Mihaly

Csikszentmihalyi, 2015-01-27 This first volume of the Collected Works of Mihaly Csikszentmihalyi represents his work on Art and Creativity. Starting with his seminal 1964 study on creativity up to his 2010 publication in Newsweek, the volume spans over four decades of research and writing and clearly shows Csikszentmihalyi's own development as an academic, psychologist, researcher and person. Unconventional and unorthodox in his approach, Csikszentmihalyi chose the topic of creativity as a field of study believing it would help him be a better psychologist and advance his understanding of how to live a better life. The chapters in this volume trace the history of the study of creativity back to the days of Guilford and research on IQ and Jacob Getzels' work on creativity and intelligence. Firmly grounded in that history, yet extending it in new directions, Mihaly Csikszentmihalyi started his life-long study on artistic creativity. His first extensive study at the School of the Art Institute of Chicago enabled him to observe, test and interview fine art students drawing in a studio. The study formed the very basis of all his work on the subject and has resulted in several articles, represented in this volume, on such creativity-related concepts as problem solving versus problem

finding, the personality of the artist, the influence of the social context, creativity as a social construction, developmental issues and flow. The main contribution to the topic of creativity and also the main concept explored in this volume, is the Systems Model of Creativity. Seven chapters in this volume discuss the development of this conceptual model and theory.

Digital Contact Tracing for Pandemic Response Jeffrey P. Kahn, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies, 2020-05-29 As nations race to hone contact-tracing efforts, the world's experts consider strategies for maximum transparency and impact. As public health professionals around the world work tirelessly to respond to the COVID-19 pandemic, it is clear that traditional methods of contact tracing need to be augmented in order to help address a public health crisis of unprecedented scope. Innovators worldwide are racing to develop and implement novel public-facing technology solutions, including digital contact tracing technology. These technological products may aid public health surveillance and containment strategies for this pandemic and become part of the larger toolbox for future infectious outbreak prevention and control. As technology evolves in an effort to meet our current moment, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing

Technologies—a rapid research and expert consensus group effort led by Dr. Jeffrey P. Kahn of the Johns Hopkins Berman Institute of Bioethics in collaboration with the university's Center for Health Security—carried out an in-depth analysis of the technology and the issues it raises. Drawing on this analysis, they produced a report that includes detailed recommendations for technology companies, policymakers, institutions, employers, and the public. The project brings together perspectives from bioethics, health security, public health, technology development, engineering, public policy, and law to wrestle with the complex interactions of the many facets of the technology and its applications. This team of experts from Johns Hopkins University and other world-renowned institutions has crafted clear and detailed guidelines to help manage the creation, implementation, and application of digital contact tracing. Digital Contact Tracing for Pandemic Response is the essential resource for this fast-moving crisis. Behavioral Finance: The Second Generation Meir

Statman, 2019-12-02 Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than

their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

A Paper Life Tatum O'Neal, 2005-10-04 A real Hollywood-style tell-all, this is the extremely candid and highly explosive autobiography of one of the movie industry's most talented and troubled young stars. At age ten, Tatum O'Neal became the youngest Oscar winner in history for her performance in the film classic *Paper Moon*. As the sidekick to her father, the flamboyant star and man-about-town Ryan O'Neal, she became a fixture at the most glamorous Hollywood parties and counted celebrities ranging from Cher to Stanley Kubrick among her childhood friends. Yet behind the glittering façade of Tatum's life lay heartbreak: abandonment, abuse, neglect, and drug addiction. She reveals the most intimate secrets of her dysfunctional relationships with her father, Ryan O'Neal, and stepmother, Farrah Fawcett, as well as her alcoholic mother, Joanna Moore, and ex-husband, tennis pro John McEnroe. After the collapse of her marriage and with no real family to turn to, Tatum succumbed to the demons of her past that would nearly kill her. Now she has emerged clean and sober,

rediscovering herself as an actress, mother, and wonderfully vibrant woman in what she considers the prime of her life.

Families in an Era of Increasing Inequality Paul R. Amato, Alan Booth, Susan M. McHale, Jennifer Van Hook, 2014-10-07 The widening gap between the rich and the poor is turning the American dream into an impossibility for many, particularly children and families. And as the children of low-income families grow to adulthood, they have less access to opportunities and resources than their higher-income peers--and increasing odds of repeating the experiences of their parents. Families in an Era of Increasing Inequality probes the complex relations between social inequality and child development and examines possibilities for disrupting these ongoing patterns. Experts across the social sciences track trends in marriage, divorce, employment, and family structure across socioeconomic strata in the U.S. and other developed countries. These family data give readers a deeper understanding of how social class shapes children's paths to adulthood and how those paths continue to diverge over time and into future generations. In addition, contributors critique current policies and programs that have been created to reduce disparities and offer suggestions for more effective alternatives. Among the topics

covered: Inequality begins at home: the role of parenting in the diverging destinies of rich and poor children. Inequality begins outside the home: putting parental educational investments into context. How class and family structure impact the transition to adulthood. Dealing with the consequences of changes in family composition. Dynamic models of poverty-related adversity and child outcomes. The diverging destinies of children and what it means for children's lives. As new initiatives are sought to improve the lives of families and children in the short and long term, *Families in an Era of Increasing Inequality* is a key resource for researchers and practitioners in family studies, social work, health, education, sociology, demography, and psychology.

Democracy Incorporated Sheldon S. Wolin, 2017-08-29

Democracy is struggling in America--by now this statement is almost cliché. But what if the country is no longer a democracy at all? In *Democracy Incorporated*, Sheldon Wolin considers the unthinkable: has America unwittingly morphed into a new and strange kind of political hybrid, one where economic and state powers are conjoined and virtually unbridled? Can the nation check its descent into what the author terms inverted totalitarianism? Wolin portrays a country where citizens are politically uninterested

and submissive--and where elites are eager to keep them that way. At best the nation has become a managed democracy where the public is shepherded, not sovereign. At worst it is a place where corporate power no longer answers to state controls. Wolin makes clear that today's America is in no way morally or politically comparable to totalitarian states like Nazi Germany, yet he warns that unchecked economic power risks verging on total power and has its own unnerving pathologies. Wolin examines the myths and mythmaking that justify today's politics, the quest for an ever-expanding economy, and the perverse attractions of an endless war on terror. He argues passionately that democracy's best hope lies in citizens themselves learning anew to exercise power at the local level. *Democracy Incorporated* is one of the most worrying diagnoses of America's political ills to emerge in decades. It is sure to be a lightning rod for political debate for years to come. Now with a new introduction by Pulitzer Prize-winning journalist Chris Hedges, *Democracy Incorporated* remains an essential work for understanding the state of democracy in America.

One Place after Another Miwon Kwon, 2004-02-27 A critical history of site-specific art since the late 1960s. Site-specific art emerged in the late 1960s in reaction to the growing

commodification of art and the prevailing ideals of art's autonomy and universality. Throughout the 1970s and 1980s, as site-specific art intersected with land art, process art, performance art, conceptual art, installation art, institutional critique, community-based art, and public art, its creators insisted on the inseparability of the work and its context. In recent years, however, the presumption of unrepeatability and immobility encapsulated in Richard Serra's famous dictum to remove the work is to destroy the work is being challenged by new models of site specificity and changes in institutional and market forces. *One Place after Another* offers a critical history of site-specific art since the late 1960s and a theoretical framework for examining the rhetoric of aesthetic vanguardism and political progressivism associated with its many permutations. Informed by urban theory, postmodernist criticism in art and architecture, and debates concerning identity politics and the public sphere, the book addresses the siting of art as more than an artistic problem. It examines site specificity as a complex cipher of the unstable relationship between location and identity in the era of late capitalism. The book addresses the work of, among others, John Ahearn, Mark Dion, Andrea Fraser, Donald Judd, Renee Green, Suzanne Lacy, Inigo Manglano-Ovalle, Richard

Serra, Mierle Laderman Ukeles, and Fred Wilson.

Health Promotion in Health Care – Vital Theories and Research Gørill Haugan, Monica Eriksson, 2021-03-11 This open access textbook represents a vital contribution to global health education, offering insights into health promotion as part of patient care for bachelor's and master's students in health care (nurses, occupational therapists, physiotherapists, radiotherapists, social care workers etc.) as well as health care professionals, and providing an overview of the field of health science and health

promotion for PhD students and researchers. Written by leading experts from seven countries in Europe, America, Africa and Asia, it first discusses the theory of health promotion and vital concepts. It then presents updated evidence-based health promotion approaches in different populations (people with chronic diseases, cancer, heart failure, dementia, mental disorders, long-term ICU patients, elderly individuals, families with newborn babies, palliative care patients) and examines different health promotion approaches integrated into primary care services. This edited scientific anthology provides much-needed knowledge, translating research into guidelines for practice. Today's medical approaches are highly developed; however, patients are human beings with a wholeness of body-mind-spirit. As such, providing high-quality and effective health care requires a holistic physical-psychological-social-spiritual model of health care is required. A great number of patients, both in hospitals and in primary health care, suffer from the lack of a holistic oriented health approach: Their condition is treated, but they feel scared, helpless and lonely. Health promotion focuses on improving people's health in spite of illnesses. Accordingly, health care that supports/promotes patients' health by identifying their health resources will result in better patient outcomes: shorter

hospital stays, less re-hospitalization, being better able to cope at home and improved well-being, which in turn lead to lower health-care costs. This scientific anthology is the first of its kind, in that it connects health promotion with the salutogenic theory of health throughout the chapters. The authors here expand the understanding of health promotion beyond health protection and disease prevention. The book focuses on describing and explaining salutogenesis as an umbrella concept, not only as the key concept of sense of coherence.

Closing the Cancer Divide Felicia Marie Knaul, 2012-12-17

Cancer has become a leading cause of death and disability and a serious yet unforeseen challenge to health systems in low- and middle-income countries. A protracted and polarized cancer transition is under way and fuels a concentration of preventable risk, illness, suffering, impoverishment from ill health, and death among poor populations. Closing this cancer divide is an equity imperative. The world faces a huge, unperceived cost of failure to take action that requires an immediate and large-scale global response. Closing the Cancer Divide presents strategies for innovation in delivery, pricing, procurement, finance, knowledge-building, and leadership that can be scaled up by applying a diagonal approach to health system strengthening. The chapters

provide evidence-based recommendations for developing programs, local and global policy-making, and prioritizing research. The cases and frameworks provide a guide for developing responses to the challenge of cancer and other chronic illnesses. The book summarizes results of the Global Task Force on Expanding Access to Cancer Care and Control in Developing Countries, a collaboration among leaders from the global health and cancer care communities worldwide, originally convened by Harvard University. It includes contributions from civil society, global and national policy-makers, patients and practitioners, and academics representing an array of fields.

How Tobacco Smoke Causes Disease, 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of

the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
