**Curtiss Ascender Xp-55** Gerald Balzer,2014-02-04 The Curtiss XP-55 Ascender was a tailless swept-wing WWII pusher fighter design born out by the USAAC 1940 fighter competition. The USAAC was looking for a fighter to counter the threat of the German Bf-109 and the Japanese Zero and replace the obsolete P-35s, P-36s and the front line P-40s just entering service. From this competition three unusual pusher prototypes were ordered, the Consolidated XP-54, Curtiss XP-55, and the Northrop XP-56. A low powered full scale flying model (model CW 24B) was built out of wood and cloth to substantiate the flying qualities, and was first flown on December 2, 1941. The XP-55 mock-up was completed in August 1942, and the first of three XP-55s was completed on June 26,1943 with its first flight being conducted on July 13, 1943. The first aircraft was destroyed on November 15, 1943. Changes deemed necessary were incorporated in the second airframe in which performance testing began on September 16, 1944. Although the much more capable P-38, P-47, and P-51 had entered service, research into the XP-55s unusual design continued. The third XP-55 had entered flight testing in April 1944 and was used at Eglin Field for armament tests before being lost during a war bond rally display on May 27, 1945. By then, the program had been terminated. Today, the second XP-55 presides in restored condition at the Kalamazoo Air Museum.

**Modelling the Rare Curtiss Fighters** Jim Norfolk,1999-05-01 The second in a series of model aircraft plans books, this book tells the story of the successful and not so good aircraft that Curtiss Wright Aircraft Corp developed shortly before WW2. They started off well with the p -36, a breakthrough in fighter

design and carried on with the famous P -40. They then tried to keep it going with various experimentals; the P 37, the P 42, P 46 and P 53, then finishing off with a near hit in the P 60 which turned out to be too little too late. These aircraft are designed for free flight powered with a rubber band but could adapted to a small gas or electric motor. These models are around 1/24 th scale. The Book contains a brief description of the aircraft, design, construction and trimming and flying instructions. The book is well illustrated with photos showing each step of the way to successfully building the model. This book has been reviewed in several model magazines including Cartens Publications FLYING MODELS, MODEL FLYER (Br), Model Airplane News and MAAC Magazine.

**Introduction to UAV Systems** Paul G. Fahlstrom,Thomas J. Gleason,2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs

and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Aerodynamic Characteristics of the NACA 747A315 and 747A415 Airfoils from Tests in the NACA

Two-dimensional Low-turbulence Pressure Tunnel Albert E. Von Doenhoff, Louis S. Stivers, 1944

Summary: Two low-drag airfoils, the NACA 747A315 and the NACA 747A415, designed to have reduced pitching moments about the quarter-chord point and moderately high values of the design lift coefficient have been tested in the NACA two-dimensional low-turbulence pressure tunnel. Section lift, drag, and pitching-moment coefficients are presented for Reynolds numbers of  $3 \times 10^6$ ,  $6 \times 10^6$ , and  $9 \times 10^6$ , together with section lift and section drag data for a Reynolds number of  $6 \times 10^6$  for the same airfoils with roughened leading edges.

*Revolutionary Atmosphere* Robert S. Arrighi, Nasa History Division, 2011-03-01 NASA SP 2010-4319. NASA History Series. This scholarly look at the Altitude Wind Tunnel covers the transformations the wind tunnel made in its long history from a wind tunnel doing full-scale testing for wartime applications, to a vacuum chamber supporting the Vision for Space Exploration, and even a brief period as home to Mercury astronaut training. The book also addresses the attempts to resurrect the facility and its eventual decommissioning and demolition.
