Mouse House Rumer Godden,2016-09-06 “Once upon a time there was a little mouse house. It was like a doll’s house, but not for dolls, for mice.” Not proper mice, but a flannel He-Mouse and She-Mouse with beady eyes and bristle whiskers who stand quite still, propped on their hind legs in the sitting room. Mary knows real mice run and scamper, and disappointed with her new gift, she puts the mouse house away in her room. Meanwhile, down in the basement, a real mouse named Bonnie has been jostled out of her woefully inadequate flowerpot home by her older brothers and sisters. Overlooked by her harried parents and desperate for shelter, Bonnie ventures upstairs and finds the mouse house. And before too long what was a miniature make-believe house becomes a marvelously messy home for proper mice who know how to play, much to everyone’s delight.

Rules of Play Katie Salen Tekinbas,Eric Zimmerman,2003-09-25 An impassioned look at games and game design that offers the most ambitious framework for understanding them to date. As pop culture, games are as important as film or television—but game design has yet to develop a theoretical framework or critical vocabulary. In Rules of Play Katie Salen and Eric Zimmerman present a much-needed primer for this emerging field. They offer a unified model for looking at all kinds of games, from board games and sports to computer and video games. As active participants in game culture, the authors have written Rules of Play as a catalyst for innovation, filled with new concepts, strategies, and methodologies for creating and understanding games. Building an aesthetics of interactive systems, Salen and Zimmerman define core concepts like play, design, and interactivity. They look at games through a series of eighteen game design schemas, or conceptual frameworks, including games as systems of emergence and information, as contexts for social play, as a storytelling medium, and as sites of cultural resistance. Written for game scholars, game developers, and interactive designers, Rules of Play is a textbook, reference book, and theoretical guide. It is the first comprehensive attempt to establish a solid theoretical framework for the emerging discipline of game design.

Modeling Creativity Tom De Smedt, 2013-02-01 Modeling Creativity (doctoral thesis, 2013) explores how creativity can be represented using computational approaches. Our aim is to construct computer models that exhibit creativity in an artistic context, that is, that are capable of generating or evaluating an artwork (visual or linguistic), an interesting new idea, a subjective opinion. The research was conducted in 2008-2012 at the Computational Linguistics Research Group (CLiPS, University of Antwerp) under the supervision of Prof. Walter Daelemans. Prior research was also conducted at the Experimental Media Research Group (EMRG, St. Lucas University College of Art & Design Antwerp) under the supervision of Lucas Nijs. Modeling Creativity examines creativity in a number of different perspectives: from its origins in nature, which is essentially blind, to humans and machines, and from generating creative ideas to evaluating and learning their novelty and usefulness. We will use a hands-on approach with case studies and examples in the Python programming language.
