**Empathy in the Treatment of Trauma and PTSD** John P. Wilson, Ph.D., Rhiannon Brywnn Thomas, Ph.D., 2004-11-23 Empathy in the Treatment of Trauma and PTSD examines how professionals are psychologically impacted by their work with trauma clients. A national research study provides empirical evidence, documenting the struggle for professionals to maintain therapeutic equilibrium and empathic attunement with their trauma clients. Among the many important findings of this study, all participants reported being emotionally and psychologically affected by the work, often quite profoundly leading to changes in worldview, beliefs about the nature of humankind and the meaning of life. John P. Wilson and Rhiannon Thomas set out to understand how to heal those who experience empathic strain in the course of their professional specialization. The data included in the book allows for the development of conceptual dynamic models of effective management of empathic strain, which may cause vicarious traumatization, burnout and serious countertransference processes.

**Book of Humanity** Anonymous, 2009-11 Understand that even with all the selfishness in the world, we will not be happy. Even with every way to be important, we will not be with happiness. Even being the most important Human ever to live will not bring happiness. Even with all of the world loving us it will not bring us happiness. The symbol of Humanity never needs to be drawn, tattooed, or created by hands, and it cannot be taken away. We Humans are the symbol of Humanity. Love is our ritual and ceremony. Love, forgiveness, mercy, kindness, thankfulness, appreciation, understanding, open-mindedness, and all the other forms of love define Humanity. Love perfects Humanity and unites us all. Love is the foundation of Humanity, and through a steadfast love, it cannot fall. ---Excerpts from the Book of Humanity

**Live Work Work Work Die** Corey Pein, 2018-04-24 A scathing, sardonic exploration of Silicon Valley tech culture, laying bare the greed, hubris, and retrograde politics of an industry that aspires to radically transform society for its own benefit At the height of the startup boom, journalist Corey Pein set out for Silicon Valley with little more than a smartphone and his wits. His goal: to learn how such an overhyped industry could possibly sustain itself as long as it has. But to truly understand the delirious reality of the tech entrepreneurs, he knew he would have to inhabit that perspective—he would have to become an entrepreneur himself. Thus Pein begins his journey—skulking through gimmicky tech conferences, pitching his over-the-top business ideas to investors, and rooming with a succession of naive upstart programmers whose entire lives are managed by their employers—who work endlessly and obediently, never thinking to question their place in the system. In showing us this frantic world, Pein challenges the positive, feel-good self-image that the tech tycoons have crafted—as nerdy and benevolent creators of wealth and opportunity—revealing their self-justifying views and their insidious visions for the future. Vivid and incisive, Live Work Work Work Die is a troubling portrait of a self-obsessed industry bent on imposing its disturbing visions on the rest of us.

**Life After Google** George Gilder, 2018-07-17 A FINANCIAL TIMES BOOK OF THE MONTH FROM THE WALL STREET JOURNAL: Nothing Mr. Gilder says or writes is ever delivered at anything less than the fullest philosophical decibel... Mr. Gilder sounds less like a tech guru than a poet, and his words tumble out in a romantic cascade. “Google’s algorithms assume the world’s future is nothing more than the next moment in a random process. George Gilder shows how deep this assumption goes, what motivates people to make it, and why it’s wrong: the future depends on human action.” — Peter Thiel, founder of PayPal and Palantir Technologies and author of Zero to One: Notes on Startups, or How to Build the Future The Age of Google, built on big data and machine intelligence, has been an awesome era. But it’s coming to an end. In Life after Google, George Gilder—the peerless visionary of technology and culture—explains why Silicon Valley is suffering a nervous breakdown and what to expect as the post-Google age dawns. Google’s astonishing ability to “search and sort” attracts the entire world to its search engine and countless other goodies—videos, maps, email, calendars....And everything it offers is free, or so it seems. Instead of paying directly, users submit to advertising. The

system of “aggregate and advertise” works—for a while—if you control an empire of data centers, but a market without prices strangles entrepreneurship and turns the Internet into a wasteland of ads. The crisis is not just economic. Even as advances in artificial intelligence induce delusions of omnipotence and transcendence, Silicon Valley has pretty much given up on security. The Internet firewalls supposedly protecting all those passwords and personal information have proved hopelessly permeable. The crisis cannot be solved within the current computer and network architecture. The future lies with the “cryptocosm”—the new architecture of the blockchain and its derivatives. Enabling cryptocurrencies such as bitcoin and ether, NEO and Hashgraph, it will provide the Internet a secure global payments system, ending the aggregate-and-advertise Age of Google. Silicon Valley, long dominated by a few giants, faces a “great unbundling,” which will disperse computer power and commerce and transform the economy and the Internet. Life after Google is almost here. For fans of *Wealth and Poverty*, *Knowledge and Power*, and *The Scandal of Money*.

**Autonomy** Lawrence D. Burns, Christopher Shulgan, 2018-08-28 An automotive and tech world insider investigates the quest to develop and perfect the driverless car—an innovation that promises to be the most disruptive change to our way of life since the smartphone. We stand on the brink of a technological revolution. Soon, few of us will own our own automobiles and instead will get around in driverless electric vehicles that we summon with the touch of an app. We will be liberated from driving, prevent over 90% of car crashes, provide freedom of mobility to the elderly and disabled, and decrease our dependence on fossil fuels. *Autonomy* is the story of the maverick engineers and computer nerds who are creating the revolution. Longtime advisor to the Google Self-Driving Car team and former GM research and development chief Lawrence D. Burns provides the perfectly-timed history of how we arrived at this point, in a character-driven and heavily reported account of the unlikely thinkers who accomplished what billion-dollar automakers never dared. Beginning with the way 9/11 spurred the U.S. government to set a million-dollar prize for a series of off-road robot races in the Mojave Desert up to the early 2016 stampede to develop driverless technology, *Autonomy* is a page-turner that represents a chronicle of the past, diagnosis of the present, and prediction of the future—the ultimate guide to understanding the driverless car and navigating the revolution it sparks.

**Future Presence** Peter Rubin, 2018-04-17 A Wired senior editor and virtual reality expert presents a captivating, candid glimpse into the future realities of this emerging technology: how we will use it to form previously impossible relationships, explore new frontiers of intimacy, and how it will forever change human connection. Heralded as the most significant technological innovation since the smartphone, virtual reality is poised to transform our very notions of life and humanity. Though this tech is still in its infancy, to those on the inside, it is the future. VR will change how we work, how we experience entertainment, how we feel pleasure and other emotions, how we see ourselves, and most importantly, how we relate to each other in the real world. And we will never be the same. Peter Rubin, senior culture editor for Wired and the industry’s go-to authority on the subject, calls it an intimacy engine. While once we needed another person to feel the sensations of closeness, trust, vulnerability, confidence, and titillation, VR will give us the ability to induce these sensations by ourselves for the first time in human history. This metamorphosis, Rubin argues, is going to have a powerful impact on relationships that will ripple throughout our society and our individual lives. A journey into this uncertain future and a glimpse at the cultural implications and promises of a new reality, *Future Presence* explores a host of complex questions about what makes us human, what connects us, and what is real. Offering a glimpse into the mind-blowing things happening in universities, labs, and tech companies around the world, Rubin leads readers on an entertaining tour of the weirdest, wildest corners of this fascinating new universe. Describing this book as half travelogue and half crystal ball, Rubin will: Introduce readers to the creators and consumers of VR technology Show readers what an experience is like inside the current VR devices Explain how this technology will upend everything we know about human connection in the future At once the incredible, inevitable story of virtual reality’s rise and a look towards the future of our fantasies, *Future Presence* is a deeply personal

examination of what connects us, and an analysis of what relationships, empathy, and sex could look like—sooner than we think.

**SAM** Jonathan Waldman, 2021-01-26 A true story of innovation that “reads like a movie” (Seth Godin), centered on a scrappy team of engineers—far from the Silicon Valley limelight—and their quest to revolutionize the traditional trade of masonry by building a robot that can lay bricks. Humans have landed men on the moon, programmed cars to drive themselves, and put the knowledge of our entire civilization in your back pocket. But no one—from MIT nerds to Army Corps engineers—has ever built a robot that can lay bricks as well as a mason. Unlike the controlled conditions of a factory line, where robots are now ubiquitous, no two construction sites are alike, and a day’s work involves countless variables—bricks that range in size and quality, temperamental mortar mixes, uneven terrain, fickle weather, and moody foremen. Twenty-five years ago, on a challenging construction job in Syracuse, architect Nate Podkaminer had a vision of a future full of efficient, automated machines that freed bricklayers from the repetitive, toilsome burden of lifting, in bricks, the equivalent of a Ford truck every few days. Offhandedly, he mentioned the idea to his daughter’s boyfriend, and after some inspired scheming, the architect and engineer—soon to be in-laws—cofounded a humble start-up called Construction Robotics. Working out of a small trailer, they recruited a boldly unconventional team of engineers to build the Semi-Automated Mason: SAM. In classic American tradition, a small, unlikely, and eccentric family-run start-up sought to reimagine the behemoth \$1 trillion construction industry—the second biggest industry in America—in bootstrap fashion. In the tradition of Tracy Kidder’s *The Soul of a New Machine*, SAM unfolds as an engineering drama, full of trials and setbacks, heated showdowns between meticulous scientists and brash bricklayers (and their even more opinionated union), and hard-earned milestone achievements. Jonathan Waldman, acclaimed author of *Rust*, masterfully “reveals a world that surrounds us but mostly eludes our notice” (The Boston Globe).

*Everybody Lies* Seth Stephens-Davidowitz, 2017-05-09 Foreword by Steven Pinker Blending the informed analysis of *The Signal and the Noise* with the instructive iconoclasm of *Think Like a Freak*, a fascinating, illuminating, and witty look at what the vast amounts of information now instantly available to us reveals about ourselves and our world—provided we ask the right questions. By the end of an average day in the early twenty-first century, human beings searching the internet will amass eight trillion gigabytes of data. This staggering amount of information—unprecedented in history—can tell us a great deal about who we are—the fears, desires, and behaviors that drive us, and the conscious and unconscious decisions we make. From the profound to the mundane, we can gain astonishing knowledge about the human psyche that less than twenty years ago, seemed unfathomable. *Everybody Lies* offers fascinating, surprising, and sometimes laugh-out-loud insights into everything from economics to ethics to sports to race to sex, gender and more, all drawn from the world of big data. What percentage of white voters didn’t vote for Barack Obama because he’s black? Does where you go to school effect how successful you are in life? Do parents secretly favor boy children over girls? Do violent films affect the crime rate? Can you beat the stock market? How regularly do we lie about our sex lives and who’s more self-conscious about sex, men or women? Investigating these questions and a host of others, Seth Stephens-Davidowitz offers revelations that can help us understand ourselves and our lives better. Drawing on studies and experiments on how we really live and think, he demonstrates in fascinating and often funny ways the extent to which all the world is indeed a lab. With conclusions ranging from strange-but-true to thought-provoking to disturbing, he explores the power of this digital truth serum and its deeper potential—revealing biases deeply embedded within us, information we can use to change our culture, and the questions we’re afraid to ask that might be essential to our health—both emotional and physical. All of us are touched by big data everyday, and its influence is multiplying. *Everybody Lies* challenges us to think differently about how we see it and the world.

*From Gutenberg to Google* Tom Wheeler, 2019-02-26 Network revolutions of the past have shaped the present and set the stage for the revolution we are experiencing today. In an era of seemingly instant change, it's easy to think that today's revolutions—in communications, business, and many areas of daily life—are unprecedented. Today's changes may be new and may be happening faster than ever before. But our ancestors at times were just as bewildered by rapid upheavals in what we now call “networks”—the physical links that bind any society together. In this fascinating book, former FCC chairman Tom Wheeler brings to life the two great network revolutions of the past and uses them to help put in perspective the

confusion, uncertainty, and even excitement most people face today. The first big network revolution was the invention of movable-type printing in the fifteenth century. This book, its millions of predecessors, and even such broad trends as the Reformation, the Renaissance, and the multiple scientific revolutions of the past 500 years would not have been possible without that one invention. The second revolution came with the invention of the telegraph early in the nineteenth century. Never before had people been able to communicate over long distances faster than a horse could travel. Along with the development of the world's first high-speed network—the railroad—the telegraph upended centuries of stability and literally redrew the map of the world. Wheeler puts these past revolutions into the perspective of today, when rapid-fire changes in networking are upending the nature of work, personal privacy, education, the media, and nearly every other aspect of modern life. But he doesn't leave it there. Outlining “What's Next,” he describes how artificial intelligence, virtual reality, blockchain, and the need for cybersecurity are laying the foundation for a third network revolution.

**Talk To Me** James Vlahos, 2019-03-26 \*\*To chat with the author, ask your Alexa device to open the voice computing book.\*\* The next great technological disruption is coming. The titans of Silicon Valley are racing to build the last, best computer that the world will ever need. They know that whoever successfully creates it will revolutionize our relationship with technology—and make billions of dollars in the process. They call it conversational AI. Computers that can speak and think like humans may seem like the stuff of science fiction, but they are rapidly moving toward reality. In *Talk to Me*, veteran tech journalist James Vlahos meets the researchers at Amazon, Google, and Apple who are leading the way. He explores how voice tech will transform every sector of society: handing untold new powers to businesses, overturning traditional notions of privacy, upending how we access information, and fundamentally altering the way we understand human consciousness. And he even tries to understand the significance of the voice-computing revolution first-hand — by building a chatbot version of his terminally ill father. Vlahos's research leads him to one fundamental question: What happens when our computers become as articulate, compassionate, and creative as we are?

**Extraordinary Awakenings** Steve Taylor, 2021-07-09 A compelling investigation of how intense psychological suffering can lead to a dramatic shift into a new, expansive identity. Why do some people who experience the worst that life has to offer respond not by breaking down but by shifting up, into a higher-functioning, awakened state, like phoenixes rising from the ashes? And perhaps more importantly, how can we emulate their transformations? Over many years of observing and studying the phenomenon of life-changing awakening through extreme suffering, Steve Taylor coined the term “transformation through turmoil.” He calls these people “shifters” and here shares dozens of their amazing stories. In addition, Taylor uncovers the psychological processes that explain these miraculous rebirths after years of struggle or devastating loss, addiction, or imprisonment. He highlights a number of lessons and guidelines that the shifters offer us. In *Extraordinary Awakenings*, readers will find not only riveting stories of transformation that show the amazing resilience of the human spirit, but also hope and guidance to call on during their own struggles, together with inspiration and profound food for thought.
