Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25

This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. *Fundamentals of Aircraft and Rocket Propulsion* provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Apartheid Guns and Money Hennie van Vuuren, 2019-03-01 In its last decades, the apartheid regime was confronted with an existential threat. While

internal resistance to the last whites-only government grew, mandatory international sanctions prohibited sales of strategic goods and arms to South Africa. To counter this, a global covert network of nearly fifty countries was built. In complete secrecy, allies in corporations, banks, governments and intelligence agencies across the world helped illegally supply guns and move cash in one of history's biggest money laundering schemes.

Whistleblowers were assassinated and ordinary people suffered. Weaving together archival material, interviews and newly declassified documents, *Apartheid Guns and Money* exposes some of the darkest secrets of apartheid's economic crimes, their murderous consequences, and those who profited: heads of state, arms dealers, aristocrats, bankers, spies, journalists and secret lobbyists. These revelations, and the difficult questions they pose, will both allow and force the new South Africa to confront its past.

Aircraft Propulsion and Gas Turbine Engines Ahmed F. El-Sayed, 2017-07-06
Aircraft Propulsion and Gas Turbine Engines, Second Edition builds upon the success of the book's first edition, with the addition of three major topic areas: Piston Engines with integrated propeller coverage; Pump Technologies; and Rocket Propulsion. The rocket propulsion section extends the text's coverage so that both Aerospace and Aeronautical topics can be studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts, the first two devoted to air breathing engines, and the third covering non-air breathing or rocket engines.

The Tenderness of Conscience Allan Boesak, 2005-03-01 With this book, theologian and political observer Allan Boesak once again displays the strengths of his writings that were evident in the seventies and eighties: bringing Christian theology to bear on the political and socio-economic realities of our world. "A serious and open-hearted commentary on the African Renaissance and the spirituality of politics, but with the clarity of the deeply embedded Christian message." – Danny Titus

Introduction to UAV Systems Paul Fahlstrom, Thomas Gleason, 2012-07-11
Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. *Introduction to UAV Systems*, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design

choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

How Sanctions Work N. Crawford, A. Klotz, 1999-01-28 How Sanctions Work surveys theories of international sanctions and offers detailed analyses of the effect of sanctions on apartheid South Africa. Chapters by respected international experts cover cultural isolation, oil and military embargoes, trade boycotts, financial sanctions and divestment, consequences for black South Africans, and regional effects. The book shows how sanctions both directly and indirectly hurt the apartheid regime while in some cases offering succour to the anti-apartheid movement.

Introduction to Aircraft Aeroelasticity and Loads Jan Robert Wright, Jonathan Edward Cooper, 2008-02-28 Aeroelastic phenomena arising from the interaction of aerodynamic, elastic and inertia forces, and the loads resulting from flight / ground manoeuvres and gust / turbulence encounters, have a significant influence upon aircraft design. The prediction of aircraft aeroelastic stability, response and loads requires application of a range of interrelated engineering disciplines. This new textbook introduces the foundations of aeroelasticity and loads for the flexible aircraft, providing an understanding of the main concepts involved and relating them to aircraft behaviour and industrial practice. This book includes the use of simplified mathematical models to demonstrate key aeroelastic and loads phenomena including flutter, divergence, control effectiveness and the response and loads resulting from flight / ground manoeuvres and gust / turbulence encounters. It provides an introduction to some up-to-date methodologies for aeroelastics and loads modelling. It lays emphasis on the strong link between aeroelasticity and loads. It also includes provision of MATLAB and SIMULINK programs for the simplified analyses. It offers an overview of typical industrial practice in meeting certification requirements.

Cold War in Southern Africa Sue Onslow, 2009-09-10 This edited volume examines the complexities of the Cold War in Southern Africa and uses a range of archives to develop a more detailed understanding of the impact of the Cold War environment upon the processes of political change. In the aftermath of European decolonization, the struggle between white minority governments and black liberation movements encouraged both sides to appeal for external support from the two superpower blocs. Cold War in Southern Africa highlights

the importance of the global ideological environment on the perceptions and consequent behaviour of the white minority regimes, the Black Nationalist movements, and the newly independent African nationalist governments. Together, they underline the variety of archival sources on the history of Southern Africa in the Cold War and its growing importance in Cold War Studies. This volume brings together a series of essays by leading scholars based on a wide range of sources in the United States, Russia, Cuba, Britain, Zambia and South Africa. By focussing on a range of independent actors, these essays highlight the complexity of the conflict in Southern Africa: a battle of power blocs, of systems and ideas, which intersected with notions and practices of race and class This book will appeal to students of cold war studies, US foreign policy, African politics and International History. Sue Onslow has taught at the London School of Economics since 1994. She is currently a Cold War Studies Fellow in the Cold War Studies Centre/IDEAS

A group of internationally renowned specialists analyzes the strong international pressure on governments to regulate arms exports, particularly since the 1991 Persian Gulf War.

Defending India Jaswant Singh, MP, 2016-07-27 Defending India attempts to comprehensively analyse the management of conflicts and security challenges faced by India during its first half century as a free country. The book is unique in being both the first in its genre and also in that it has been authored by a prominent Indian public figure, a parliamentarian of high standing, and a senior member of the present government in New Delhi. This book plumbs the sources of Indian strategic culture and thought, the evolution of its armed forces, the management of conflicts in the past 50 years (some 37 in all), and along with examining India's defence expenditure patterns, the author also addresses himself to the challenges that India faces in the future. While presenting a new insight into the last 50 years, Defending India also suggests essential structural changes for the future.
