Celestial Being Noboru Kimura,Hajime Yadate,Yoshiyuki Tomino,2010 The novelization of the hit anime series! The year is 2307 A.D. Although fossil fuels have been depleted, humanity has obtained a new source of energy to replace them in the form of a large-scale solar power generation system based on three huge orbital elevators. However, the benefits of this system are available only to a handful of major powers and their allies. The three orbital elevators belong to three superpower blocs. These are the Union, led by the United States of America; the Human Reform League, led by China, Russia, and India; and the AEU, led by Europe. These superpower blocs continue to play a grand zero-sum game for the sake of their own prestige and prosperity. In this world of never-ending conflict, a private armed organization appears, dedicated to the elimination of war through armed force. Its name is Celestial Being, and it is in possession of Gundam mobile suits. With these Gundams, it begins armed intervention into all acts of war.

Project Orion George Dyson,2003-03-26 The race to the moon dominated space flight during the the 1960s yet, during the late 1950s and early 1960s, the US Government sponsored a project that could possibly have sent 150 people on expeditions to Mars or Saturn.The project was code-named Orion and centred upon the effort to develop a fast, manoeuvrable, nuclear-powered space vehicle for long-range voyages in space. The proposed 4000-ton spaceship would be propelled by nuclear bombs but, strictly classified, the project was never given a chance to succeed or fail - due partly to its apparent absurdity - but its mix of sublime physics, madcap engineering, and a cast of Cold War warriors and would-be inter-galactic engineers made the mission a tantalising what if story.In this book George Dyson, son of physicist Freeman Dyson, one of the original project team, pieces together the story his father could only tell him in fragments at the time.

Secret Projects Bill Rose,2008 This new addition to the highly successful 'Secret Projects' series adds a new dimension to the weird, wonderful and wacky ideas that were developed to conquer space

Flying Wings and Tailless Aircraft Bill Rose,2010 This is an exciting new addition to the highly successful Secret Projects series, which examines some extraordinary flying wings and tailless aircraft projects. Designed and developed since the dawn of aviation, these aircraft still hold a great importance today, with many aviation enthusiasts eager to learn more about these remarkable aircraft, which provided the foundations for the modern aviation scene. Beginning with an analysis of the advantages of the flying wing, the author looks at why aerodynamicists have been attracted to this unique configuration since the earliest days of manned flight, highlighting a range of specific aircraft and relevant examples. Many aviation enthusiasts will delight in discovering the more intimate developmental details of familiar aircraft including the famous early glider Junkers and other World War 1 flying wing biplane designs.

Structural Dynamics of Electronic and Photonic Systems Ephraim Suhir,T. X. Yu,David S. Steinberg,2011-04-04 The proposed book will offer comprehensive and versatile methodologies and recommendations on how to determine dynamic characteristics of typical micro- and opto-electronic structural elements (printed circuit boards, solder joints, heavy devices, etc.) and how to design a viable and reliable structure that would be able to withstand high-level dynamic loading. Particular attention will be given to portable devices and systems designed for operation in harsh environments (such as automotive, aerospace, military, etc.) In-depth discussion from a mechanical engineer's viewpoint will be conducted to the key components' level as well as the whole device level. Both theoretical (analytical and computer-aided) and experimental methods of analysis will be addressed. The authors will identify how the failure control parameters (e.g. displacement, strain and stress) of the vulnerable components may be affected by the external vibration or shock loading, as well as by the internal parameters of the infrastructure of the device. Guidelines for material selection, effective protection and test methods will be developed for engineering practice.

Subjective Quality Measurement of Speech Kazuhiro Kondo,2012-02-06 It is becoming crucial to accurately estimate and monitor speech

quality in various ambient environments to guarantee high quality speech communication. This practical hands-on book shows speech intelligibility measurement methods so that the readers can start measuring or estimating speech intelligibility of their own system. The book also introduces subjective and objective speech quality measures, and describes in detail speech intelligibility measurement methods. It introduces a diagnostic rhyme test which uses rhyming word-pairs, and includes: An investigation into the effect of word familiarity on speech intelligibility. Speech intelligibility measurement of localized speech in virtual 3-D acoustic space using the rhyme test. Estimation of speech intelligibility using objective measures, including the ITU standard PESQ measures, and automatic speech recognizers.

The Nature of Biological Systems as Revealed by Thermal Methods Dénes Lörinczy,2006-02-21 After a kind motivation by Judit Simon (Editor-in-Chief of the Journal of Thermal Analysis and Calorimetry, Kluwer Academic Publishers) and negotiations with possible contributors - lasting for more than one year - it was decided to write a book about the application of thermal methods in biology. Its aim was to be a guide how to perform experiments and what kind of information might be gained by them. We tried to collect information that could be achieved only during a long personal practice. In this way scientists from biology and medicine, e. g., who are not so skilled in physics and mathematics may realize very soon the beauty and power of this tool at one hand. On the other hand, those scientists with better background in natural sciences can be more sensitive to find out exciting biological problems.

Structural Connections for Lightweight Metallic Structures Pedro M.G.P. Moreira,Lucas F. M. da Silva,Paulo M.S.T. de Castro,2012-02-05 Increasing concern with fuel consumption leads to widespread interest in lightweight structures for transportation vehicles. Several competing technologies are available for the structural connections of these structures, namely welding, mechanical fastening / riveting, and adhesive technologies. Arranged in a single volume, this work is to presents state-of-the-art discussions of those aspects and processes presenting greater novelty whilst simultaneously keeping wide applicability potential and interest. The topics chosen have the common feature of being of currently applied in lightweight structures, and one of the characteristics of this work is bringing together relevant state-of-the-art information usually presented in separate publications specializing in a single technology. The book provides discussions and examples of concrete applications, so that it appeals to researchers and designers and engineers involved in the design and fabrication of lightweight structures.

The Environments of the Sun and the Stars Jean-Pierre Rozelot,Coralie Neiner,2012-08-17 Based on lectures given at a CNRS summer school in France, this book covers many aspects of stellar environments (both observational and theoretical) and offers a broad overview of the field. More specifically, Part I of the book focuses on the Sun, the properties of the ejected plasma, of the solar wind and on space weather. The second part deals with tides in planetary systems and in binary stellar systems, as well as with interactions in massive binary stars as seen by interferometry. Finally the chapters of Part III discuss the environments of young or evolved stars, stellar winds, magnetic fields and disks. With its broad approach the book will provide advanced students as well as researchers with a good overview of the environments of the Sun and the stars.

The Challenges of the New EU Pharmaceutical Legislation José Luis Valverde,Paul Weissenberg,2005 In the domain of public policy on

pharmaceuticals, protecting public health requires a dual strategy: robust regulation on the one hand and stimulation of competitiveness and innovation on the other. Regulation must be robust to ensure that only medicines meeting exact standards of safety, quality and efficacy are authorised for human and animal use. At the same time competitiveness and innovation must be stimulated. Without innovation in pharmaceuticals, the incurable diseases of today will remain incurable. Competitiveness drives innovation and innovation saves lives. Increased competitiveness of the pharmaceutical sector will not only better protect public health, but will also create high quality jobs and create growth. In this context the implementation of the G10 recommendations, particularly regarding the pricing and reimbursement of medicines by Member States, remains a considerable challenge.

Strings and Fundamental Physics Marco Baumgartl,Ilka Brunner,Michael Haack,2012-04-05 The basic idea, simple and revolutionary at the same time, to replace the concept of a point particle with a one-dimensional string, has opened up a whole new field of research. Even today, four decades later, its multifaceted consequences are still not fully conceivable. Up to now string theory has offered a new way to view each particle: as different excitations of the same fundamental object. It has celebrated success in discovering the graviton in its spectrum, and it has naturally led scientists to posit space-times with more than four dimensions—which in turn has triggered numerous interesting developments in fields as varied as condensed matter physics and pure mathematics. This book collects pedagogical lectures by leading experts in string theory, introducing the non-specialist reader to some of the newest developments in the field. The carefully selected topics are at the cutting edge of research in string theory and include new developments in topological strings, or AdS/CFT dualities, as well as newly emerging subfields such as doubled field theory and holography in the hydrodynamic regime. The contributions to this book have been selected and arranged in such a way as to form a self-contained, graduate level textbook.

The High Energy Solar Corona: Waves, Eruptions, Particles Karl L. Klein,Alexander L. MacKinnon,2007-09-26 An outgrow of an earlier workshop held by the community of European Solar Radio Astronomers (CESRA), this topical volume collects reviews on the current multiwavelength findings and perspectives from the space missions RHESSI, TRACE and SOTTO. The aspects of solar physics dealt with are particle acceleration during flares, large-scale disturbances, and coronal plasma physics.

The Challenge of Change: Dealing with the Legacy of the Modern Movement D. van den Heuvel,M. Mesman,W. Quist,2008-09-11 Conservation of architecture - and the conversation of Modern architecture in particular – has assumed new challenges. Rather than attempting to return a Modern building to its resumed original state, the challenge of these proceedings is to revalue the essence of the manifold manifestations of Modern architecture and redefine its meanings in a rapidly changing world of digital revolution, worldwide mobility and environmental awareness. This volume aims to provide a variety of platforms for the exchange of ideas and experience. A large, international group of architects, historians, scholars, preservationists and other parties involved in the processes of preserving, renovating and transforming Modern buildings has been invited to investigate the paradox of the Modern monument, and to reflect on the manifold dilemmas of change and continuity. The general theme is elaborated through five sub-themes. The sub-theme ‘Change and Continuity’ addresses the tensions between change and continuity from a historical-theoretical perspective. ‘Restructuring Cities and Landscapes’ focuses on the larger scale of city and landscape, while ‘Shifts in Programme and Flexibility’ draws attention to the scale of the building or building complex, and questions limits of re-use and flexibility. The fourth sub-theme deals with education and the fifth sub-theme ‘Progress, Technology and Sustainability’ considers specific issues of techniques and materials.

The Physics of Phase Space Young S. Kim,Woodford W. Zachary,2005-09-13 The concept of phase space plays a decisive role in the study of the transition from classical to quantum physics. This is particularly the case in areas such as nonlinear dynamics and chaos, geometric quantization and

the study of the various semi-classical theories, which are the setting of the present volume. Much of the content is devoted to the study of the Wigner distribution. This volume gives the first complete survey of the progress made by both mathematicians and physicists. It will serve as an excellent reference for further research.

String Processing and Information Retrieval Mario A. Nascimento, Edleno S. de Moura, Arlindo L. Oliveira, 2003-12-12 This volume of the Lecture Notes in Computer Science series provides a comprehensive, state-of-the-art survey of recent advances in string processing and information retrieval. It includes invited and research papers presented at the 10th International Symposium on String Processing and Information Retrieval, SPIRE 2003, held in Manaus, Brazil. SPIRE 2003 received 54 full submissions from 17 countries, namely: Argentina(2), Australia(2), Brazil(9), Canada(1), Chile(4), Colombia(2), Czech Republic (1), Finland (10), France (1), Japan (2), Korea (5), Malaysia (1), Portugal (2), Spain (6), Turkey (1), UK (1), USA (4) – the numbers in parentheses indicate the number of submissions from that country. In the nontrivial task of selecting the papers to be published in these proceedings we were fortunate to count on a very international program committee with 43 members, representing all continents but one. These people, in turn, used the help of 40 external referees. During the review process all but a few papers had four reviews instead of the usual three, and at the end 21 submissions were accepted to be published as full papers, yielding an acceptance rate of about 38%. An additional set of six short papers was also accepted. The technical program spans over the two well-defined scopes of SPIRE (string processing and information retrieval) with a number of papers also focusing on important application domains such as bioinformatics. SPIRE 2003 also features two invited speakers: Krishna Bharat (Google, Inc.) and Joao Meidanis (State Univ. of Campinas and Scylla Bioinformatics).

The Pulsations of the Sun and the Stars Jean-Pierre Rozelot, Coralie Neiner, 2011-07-03 This volume of lecture notes brings together the knowledge on pulsations of the Sun and the stars, with a particular emphasis on recent observations and modelling, and on the influence of pulsations of other physical processes. The book begins with an extensive introduction to helioseismology. The solar cycle and gravity modes are discussed before the focus is widened from helioseismology to asteroseismology which is detailed in a series of specific chapters. Based on courses given at a graduate school, these tutorial lecture notes will be of interest and useful to a rather broad audience of scientists and students.

The Fundamentals of Electron Density, Density Matrix and Density Functional Theory in Atoms, Molecules and the Solid State N.I. Gidopoulos, Stephen Wilson, 2013-03-09 This volume records the proceedings of a Forum on The Fundamentals of Electron Density, Density Matrix and Density Functional Theory in Atoms, Molecules and the Solid State held at the Cossener's House, Abingdon-on-Thames, Oxon. over the period 31st May - 2nd June, 2002. The forum consisted of 26 oral and poster presentations followed by a discussion structure around questions and comments submitted by the participants (and others who had expressed an interest) in advance of the meeting. Quantum mechanics provides a theoretical foundation for our understanding of the structure and properties of atoms, molecules and the solid state in terms of their component particles, electrons and nuclei. (Relativistic quantum mechanics is required for molecular systems containing heavy atoms.) However, the solution of the equations of quantum mechanics yields a function, a wave function, which depends on the coordinates, both space and spin, of all of the particles in the system. This function contains much more information than is required to yield the energy or other property.

Therapeutic Uses of Rap and Hip-Hop Susan Hadley, George Yancy, 2012-05-22 In perceiving all rap and hip-hop music as violent, misogynistic, and sexually charged, are we denying the way in which it is attentive to the lived experiences, both positive and negative, of many therapy clients? This question is explored in great depth in this anthology, the first to examine the use of this musical genre in the therapeutic context. The contributors are all experienced therapists who examine the multiple ways that rap and hip-hop can be used in therapy by listening and discussing, performing, creating, or improvising. The text is divided into three sections that explore the historical and theoretical perspectives of rap and hip-hop in therapy,

describe the first-hand experiences of using the music with at-risk youth, and discuss the ways in which contributors have used rap and hip-hop with clients with specific diagnoses, respectively. Within these sections, the contributors provide rationale for the use of rap and hip-hop in therapy and encourage therapists to validate the experiences for those for whom rap music is a significant mode of expression. Editors Susan Hadley and George Yancy go beyond promoting culturally competent therapy to creating a paradigm shift in the field, one that speaks to the problematic ways in which rap and hip-hop have been dismissed as expressive of meaningless violence and of little social value. More than providing tools to incorporate rap into therapy, this text enhances the therapist's cultural and professional repertoire.

Sustainable Preparation of Metal Nanoparticles Rafael Luque,Rajender S. Varma,2012-11-10 This timely publication bridges and presents the latest trends and updates in three hot topics of current and future society: nanomaterials, energy and environment. It provides the state-of-the-art as well as current challenges and advances in the sustainable preparation of metal nanoparticles and their applications. The book fills a critical gap in a multidisciplinary area of high economic, social and environmental importance. Currently, there are no books published that deal with these ever increasing important topics, as most books in this area focus on a particular topic (eg. nanomaterials or catalysis or energy or environment). This is the first multidisciplinary edited book covering the very basics to the more advanced, trendy developments, containing a unique blend of nano, green, renewable and bio.
