Typographic Systems of Design Kimberly Elam,2007-05-03 Typographic organization has always been a complex system in that there are so

many elements at play, such as hierarchy, order of reading, legibility, and contrast. In *Typographic Systems*, Kim Elam, author of our bestselling books, *Geometry of Design* and *Grid Systems*, explores eight major structural frameworks beyond the grid including random, radial, modular, and bilateral systems. By taking the reader through exercises, student work, and professional examples, Elam offers a broad range of design solutions. Once essential visual organization systems are understood the designer can fluidly organize words or images within a structure, combination of structures, or a variation of a structure. With clarity and substance, each system from the structured axis to the nonhierarchical radial arrays is explained and explored so that the reader comes away with a better understanding of these intricate complex arrangements. *Typographic Systems* is the seventh title in our bestselling *Design Briefs* series, which has sold more than 100,000 copies worldwide.

Fractured Realms Horrified Press, 2014-06-15 Extraordinary people marked 'not normal' come from all different walks of life. For far too long, a shroud of darkness was thrown over those who've had boundless potential to transcend greatness; shunned and cast out through the misjudgment forced upon them. People enduring isolation from being trapped inside their own minds. People labeled with an ASD-Autism Spectrum Disorder. Seeds of greatness cannot be cultivated through judgment and condemnation. Imagine a world never having heard the music of Wolfgang Amadeus Mozart? Never seeing the extraordinary art of Michelangelo? What if Sir Isaac Newton hadn't discovered gravity, and laws of motion that would be relevant 300 years later? And for all the writers out there...were you aware that Lewis Carroll-author of 'Alice in Wonderland'-fell under the umbrella of Autism? So to all of you, who are reading this, ask yourself... Is Autism a disorder, or is it a gift? Through their short stories and poetry, a collection of talented authors have tackled that question.

Attack of the 50 Foot Blockchain David Gerard, 2017-07-24 An experimental new Internet-based form of money is created that anyone can generate at home; people build frightening firetrap computers full of video cards, putting out so much heat that one operator is hospitalised with heatstroke and brain damage. A young physics student starts a revolutionary new marketplace immune to State coercion; he ends up ordering hits on people because they might threaten his great experiment, and is jailed for life without parole. Fully automated contractual systems are proposed to make business and the law work better; the contracts people actually write are unregulated penny stock offerings whose fine print literally states that you are buying nothing of any value. The biggest crowdfunding in history attracts \$150 million on the promise that it will embody "the steadfast iron will of unstoppable code"; upon release it is immediately hacked, and \$50 million is stolen. How did we get here? David Gerard covers the origins and history of Bitcoin to the present day, the other cryptocurrencies it spawned including Ethereum, the ICO craze and the 2017 crypto

bubble, and the attempts to apply blockchains and smart contracts to business. Plus a case study on blockchains in the music industry. Bitcoin and blockchains are not a technology story, but a psychology story. Remember: if it sounds too good to be true, it almost certainly is. “A sober riposte to all the upbeat forecasts about cryptocurrency” — New York Review of Books “A very convincing takedown of the whole phenomenon” — BBC News
