FTIR Microspectroscopy Nouredine Abidi, 2022-01-04 Fourier Transform Infrared microspectroscopy (FTIR) was first developed by William Coblentz in 1905 for analytical purposes. It has been established as a powerful analytical method to analyze a wide range of materials. The most convenient way to analyze the molecular structure was to prepare KBr pellets with small amount of chemical species. Currently, the development of the Universal Attenuated Total Reflectance (UATR) allows the use of ZnSe-Diamond crystal to acquire FTIR spectra directly from the sample with no special preparation. These traditional FTIR analyses have been made with devices capable of performing single measurements, thus, providing a single IR spectrum of the sample. Recent major technological development in FTIR instrumentation was development of microscopes and imaging systems. These devices are now capable of imaging larger sample area, providing not only spectroscopic information but also spatial distributional information. In addition, the development of Focal Point Array (FPA) has made FTIR imaging an emerging area of chemical imaging research. The aim of this book is to summarize in a single document the research work that is being performed using UATR and IR imaging in selected emerging applications in plant materials and biological

samples. This book provides the readers new knowledge, updates information, emerging applications, and understanding of the potential use of FTIR Microspectroscopy.

Muscle and Sensory Testing Nancy Berryman Reese, 2012 Information about the art of manual muscle testing, needed to effectively perform manual muscle and sensory tests, including an overview of muscle strength assessment and precise anatomic testing techniques for upper extremities, lower extremities, and head, neck and trunk; functional muscle tests; tests for mental status, cranial nerves and superficial reflexes; and use of observational gait analysis as a screening tool.

The ESC Textbook of Sports Cardiology Antonio Pelliccia, Hein Heidbuchel, Domenico Corrado, Mats Borjesson, Sanjay Sharma, 2019-03-14 Sports and exercise have been intensely advocated as protective lifestyle measures which prevent or reduce the risk of severe health issues,

including cardiovascular disease. More extreme forms of sports (for instance at high altitudes) have been identified as an important way of promoting cardiovascular adaptation, but have also been associated with adverse effects and even major cardiovascular events in predisposed individuals. Participating in more commonplace sports and exercise, such as football, may also increase a person's risk of cardiac events. This publication is timely in the light of a burgeoning number of clinical papers in the field. The ESC Textbook of Sports Cardiology provides an overview of the detection and treatment of cardiovascular disease in elite athletes and young sports professionals in training, as well as prevention. It will be useful for clinical cardiologists, sports physicians, and general physicians alike. Split into 11 key areas in sports cardiology, ranging from sudden cardiac death in athletes to the most common cardiovascular abnormalities seen in athletes, and to the effects of substance abuse and doping, the text is an invaluable resource covering all aspects of sports cardiology. Access to the digital version of the textbook is included with purchase of the printed version. Highly illustrated with embedded multimedia features, together with cross-referenced links to related content and primary research data in major journals in the field, the digital version provides users with a dynamic and forward-thinking resource. The ESC Textbook of Sports Cardiology is the second textbook from the European Association of Preventive Cardiology (EAPC) and aligns with ESC clinical practice guidelines and EAPC recommendations and position papers.

Gender Equality: Women's Rights in Review 2020 United Nations Publications,2020-04-13 2020 marks the 25th anniversary of the adoption of the Beijing Platform for Action. It also marks the first time that progress on the implementation of the Platform is reviewed in light of the 2030 Agenda for Sustainable Development, adopted in 2015. This report therefore takes an integrated approach to reporting on progress, gaps and challenges related to the advancement of gender equality and women's rights across six dimensions that link the Platform's critical areas of concern and the Sustainable Development Goals. It finds that there have been important gains since the adoption of the Beijing Platform in 1995, but that progress towards gender equality has stalled and even reversed in some areas in recent years. Across the globe women's movements, energized by young feminists at the helm, are challenging slow and piecemeal progress and are impatient for systemic change. World leaders can learn from the ways in which these movements work across silos and political boundaries, seeing their work to advance the rights of women and girls as inextricably linked to the achievement of economic, social and environmental justice for all. The report features their voices that must be heard and acted upon. The report also highlights catalytic policies and programmes under each of the six dimensions as well as a number of cross-cutting strategies that can accelerate the implementation of the entire Platform for Action for this

generation and the next.
