*Pet Loss and Human Emotion, second edition* Cheri Barton Ross,2013-05-13 This updated edition of *Pet Loss and Human Emotion* is a step-by-step guide to leading clients through this special kind of grief. Includes resources and a section on pet loss and natural disasters. As society accepts that grieving over the death of a loved one is not only normal, but healthy and necessary, grieving over the loss of a pet is often seen differently. Expressed feelings often go unvalidated when in truth, pet loss is

a unique form of grief that can be quite intense and debilitating, increasing an individual's vulnerability to subsequent stress and leaving them feeling isolated and misunderstood. Pet loss needs to be addressed by therapists and others in the helping professions, to better enable them to help their clients through the loss of their companion animals. This unique guide is written for all professionals helping clients deal with the loss of a pet, and serves as a practical introduction to the field of human-animal bonding. Citing several case studies, it describes various techniques for helping clients when the bond with a pet is broken.

**Psychology Library Editions: Emotion** Various

Authors, 2022-07-30 Emotion (or affect) is a cross-disciplinary subject in psychology. Psychology Library Editions: Emotion makes available again twelve previously out-of-print titles that were originally published between 1976 and 1999, either as a set or as individual volumes, in your choice of print or ebook. Written by a range of authors from diverse backgrounds and spanning different areas of psychology, such as clinical, cognitive, developmental and social, the volumes feature a variety of approaches and topics. This is a great opportunity to trace the development of research in emotion from a number of different perspectives.

*Bridging the Gap between Machine Learning and Affective Computing* Zhen Cui, Abhinav Dhall, Xiaopeng Hong, Yong Li, Wenming Zheng, Yuan Zong, 2023-01-05 Affective computing refers to computing that relates to, arises from, or influences emotions, as pioneered by Rosalind Picard in 1995. The goal of affective computing is to bridge the gap between human and machines and ultimately enable robots to communicate with human naturally and emotionally. Recently, the research on affective computing has gained considerable progress with many fields contributing including neuroscience, psychology, education, medicine, behavior, sociology, and computer science. Current research in affective computing mainly focuses on estimating of

human emotions through different forms of signals, e.g., face video, EEG, Speech, PET scans or fMRI. Inferring the emotion of humans is difficult, as emotion is a subjective, unconscious experience characterized primarily by psycho-physiological expressions and biological reactions. It is influenced by hormones and neurotransmitters such as dopamine, noradrenaline, serotonin, oxytocin, GABA... etc. The physiology of emotion is closely linked to arousal of the nervous system with various states and strengths relating, apparently, to different particular emotions. To understand “emotion” or “affect” merely by machine learning or big data analysis is not enough, but the understanding and applications from the intrinsic features of emotions from the neuroscience aspect is essential.

Design and Emotion Deana McDonagh, Paul Hekkert, Jeroen van Erp, Diane Gyi, 2003-10-24 There is considerable interest in and growing recognition of the emotional domain in product development. The relationship between the user and the product is paramount in industry, which has led to major research investments in this area. **Altruistic Emotion, Cognition, and Behavior (PLE: Emotion)** Nancy Eisenberg, 2014-11-20 Originally published in 1986, this book was an effort to integrate thinking and research concerning the role of emotion and cognition in altruistic behaviour. Prior to publication there was a vast body of research and theorizing concerning the development and maintenance of prosocial (including altruistic) behaviour. This book focusses primarily on a specific set of intrapsychic factors involved in prosocial responding, especially emotions and cognitions believed to play a major role in altruistic behaviour. In the final chapters these intrapsychic factors are also discussed in relation to a variety of other relevant factors including socialization and situational influences on altruism.

*Emotional Engineering, Vol. 8* Shuichi Fukuda, 2020-02-08

This book is focused on the importance of detecting people's motivation, how they make decisions and the way the actions they take is rapidly increasing with the progress of IoT and the Connected Society. It explores how emotion-related processes are increasing in importance rapidly. The contributors move through a variety of related topics, all aimed at revealing how humans and things must increasingly interact. It indicates how strategy becomes increasingly important, particularly creating the best adaptable strategy to respond to the quickly and extensively changing situations. With engineering quickly moving from product development to experience development, and the role of emotion in engineering becoming increasingly apparent, this book offers a timely and valuable resource for engineers and researchers alike.

*Chinese Firms Going Global: Can They Succeed?* Healy Joseph C, 2018-06-08 China has increased its engagement with the world and is pursuing ambitious economic goals. Much has been written about the economic and social impact of Inbound Foreign Direct Investment (IFDI) on China with the transfer-in of Western resources and expertise. Less has been written, in an accessible way at least, on the unleashing of the entrepreneurial spirit and Outbound Foreign Direct Investment (OFDI) of China as Chinese firms have gone global. The global expansion of Chinese firms is a recent phenomenon, which is not well understood. The book is aimed at providing an important context for understanding the challenges and biases Chinese firms face while going global, using a multi-disciplinary approach weaving themes from history, contemporary Chinese politics, geopolitics, international relations, economics, finance, strategy, culture and society, together with the role of management education in developing entrepreneurs' capabilities for success. The book also explores the basis upon which Chinese firms can compete outside their domestic market by using a Four Cs' framework -- core capabilities, cultural adaptability, competencies of management

and country of origin. The book argues that weaknesses in several of the Four Cs' might be compensated for by the Fifth C -- cooperation from government. The book will appeal to the growing legion of China-watchers and general readers who are open-minded and keen to better understand their increasing profile of Chinese firms in international markets. Are they a threat? To whom? And why? Contents: The China Dream The Facts on Chinese OFDI The Five Biases The Barrier of Political Ideology The Complexity of Culture International Strategy Firm Performance and the Role of the Financial System Management Education Concluding Remarks Readership: General readers interested in China's Economy, China's overseas investment, Chinese firms' international strategies. Keywords: Chinese Firms; Globalization; OFDI; Biases; Insurmountable Challenges; Management Capabilities; Political Ideology; Culture; Management Education Review: Key Features: Comprehensive and rigorous, but accessible treatment of an important topic that is rarely addressed in a balanced manner in most western media discourse Bridges academia and popular treatment in a unique manner which appeals to both the Chinese and Western readers

Modeling and Using Context Anind Dey, Boicho Kokinov, David Leake, Roy Turner, 2005-07-11 Context is of crucial importance for research and applications in many disciplines, as evidenced by many workshops, symposia, seminars, and conferences on specific aspects of context. The International and Interdisciplinary Conference on Modeling and Using Context (CONTEXT), the oldest conference series focusing on context, provides a unique interdisciplinary emphasis, bringing together participants from a wide range of disciplines, including artificial intelligence, cognitive science, computer science, linguistics, organizational science, philosophy, psychology, ubiquitous computing, and application areas such as medicine and law, to discuss and report on context-related research and projects.

Previous CONTEXT conferences were held in Rio de Janeiro, Brazil (1997), Trento, Italy (1999, LNCS 1688), Dundee, UK (2001, LNCS 2116), and Palo Alto, USA (2003, LNCS 2680). CONTEXT 2005 was held in Paris, France during July 5-8, 2005. There was a strong response to the CONTEXT 2005 Call for Papers, with 120 submissions received. A careful review process assessed all submissions, with each paper first reviewed by the international Program Committee, and then reviewer discussions were initiated as needed to assure that the final decisions carefully considered all aspects of each paper. Reviews of submissions by the Program Chairs were supervised independently and anonymously, to assure fair consideration of all work. Out of the 120 submissions, 23 were selected as full papers for oral presentation, and 20 were selected as full papers for poster presentation. These outstanding papers are presented in this proceedings.
