**Red Bull Racing F 1 Car** Steve Rendle,2011-09-15 After the closest-fought season in F1 history, Sebastian Vettel became the youngest-ever World Champion. His car, the Red Bull RB6, the work of a team led by legendary F1 designer Adrian Newey, was the envy of the paddock, proving to be consistently faster than its rivals over the season. In this fascinating book, the Red Bull RB6 receives the Haynes Manual treatment, providing an unprecedented insight into the design, technology and engineering of an F1 car as well as the inner workings of Red Bull Racing.

*How to Reassess Your Chess* Jeremy Silman,2010 How to Reassess Your Chess has long been considered a modern classic. This 4th edition takes Silman's groundbreaking concept of imbalances to a whole new level. Designed for players in the 1400 to 2100 rating range and for teachers looking for a ready-made chess curriculum, the author shares a mind-expanding journey that takes the reader through imbalance-basics, ensures that every detail of all the imbalances are mastered, and leaves the player/lover of chess with something he always wanted but never believed he could achieve: a master-level positional foundation. Hundreds of games brought to life by instruction-rich prose, and stories that offer humor while highlighting various lessons, vividly illustrate all the book's topics in a manner that's both personal and fun. Jeremy Silman is an International Master and a world-class teacher, writer, and player who has won the American Open, the National Open, and the U.S. Open.

**Electronic Circuit Design** Nihal Kularatna,2017-12-19 With growing consumer demand for portability and miniaturization in electronics, design engineers must concentrate on many additional aspects in their core design. The plethora of components that must be considered requires that engineers have a concise understanding of each aspect of the design process in order to prevent bug-laden prototypes. Electronic Circuit Design allows engineers to understand the total design process and develop prototypes which require little to no debugging before release. It provides step-by-step instruction featuring modern components, such as analog and mixed signal blocks, in each chapter. The book details every aspect of the design process from conceptualization and specification to final implementation and release. The text also demonstrates how to utilize device data sheet information and associated application notes to design an electronic system. The hybrid nature of electronic system design poses a great challenge to engineers. This book equips electronics designers with the practical knowledge and tools needed to develop problem free prototypes that are ready for release.

The Sanctuary of Athena Nike in Athens Ira S. Mark,1993 Based on records from Nikolaos Balanos' dismantling and reerection of the temple of Athena Nike on the Athenian Acropolis (between 1935 and 1939), this volume presents a detailed architectural study of the building's chronology and history.

**Beating Minor Openings** Victor Mikhalevski,2016-10-05 Beating Minor Openings offers a world-class repertoire for Black against every sensible first move apart from 1.d4 and 1.e4. GM Victor Mikhalevski advocates an ambitious approach for Black, with the aim of occupying the centre and fighting for an advantage, rather than mere equality, wherever possible. The most critical moves covered are 1.c4 and 1.Nf3. Against the latter, Mikhalevski supplies a range of replies to allow for transpositions to most queen's pawn openings. In a review of Mikhalevski's previous book for Quality Chess, IM John Cox commented: Given the goal the book has set itself, I don't believe the job could have been done better.

Computational Modeling of Narrative Inderjeet Mani, 2022-05-31 The field of narrative (or story) understanding and generation is one of the oldest in natural language processing (NLP) and artificial intelligence (AI), which is hardly surprising, since storytelling is such a fundamental and familiar intellectual and social activity. In recent years, the demands of interactive entertainment and interest in the creation of engaging narratives with life-like characters have provided a fresh impetus to this field. This book provides an overview of the principal problems, approaches, and challenges faced today in modeling the narrative structure of stories. The book introduces classical narratological concepts from literary theory and their mapping to computational approaches. It demonstrates how research in AI and NLP has modeled character goals, causality, and time using formalisms from planning, case-based reasoning, and temporal reasoning, and discusses fundamental limitations in such approaches. It proposes new representations for embedded narratives and fictional entities, for assessing the pace of a narrative, and offers an empirical theory of audience response. These notions are incorporated into an annotation scheme called NarrativeML. The book identifies key issues that need to be addressed, including annotation methods for long literary narratives, the representation of modality and habituality, and characterizing the goals of narrators. It also suggests a future characterized by advanced text mining of narrative structure from large-scale corpora and the development of a variety of useful authoring aids. This is the first book to provide a systematic foundation that integrates together narratology, AI, and computational linguistics. It can serve as a narratology primer for computer scientists and an elucidation of computational narratology for literary theorists. It is written in a highly accessible manner and is intended for use by a broad scientific audience that includes linguists (computational and formal semanticists), AI researchers, cognitive scientists, computer scientists, game developers, and narrative theorists. Grandmaster Repertoire - 1. D4 Boris Avrukh, 2010 Grandmaster Repertoire is a new series of high quality chess books based on the main lines, written by strong grandmasters. The aim is to provide the reader with a complete repertoire at a level good enough for elite tournaments, and certainly also for the club championship. Grandmaster Repertoire provides a repertoire to last a lifetime. Top GM Boris Avrukh charts a course towards an advantage with 1.d4. Avrukh is used to facing the best players in the world. In this book he presents an improved version of the repertoire that elevated him to the top 50, focussing on main lines with a kingside fianchetto. 1.d4 Volume Two covers the King's Indian, Dutch, Grunfeld, various Benonis, Benko, Budapest Gambit and other minor openings.

**Fluid Vortices** Sheldon Green, 2012-12-06 Fluid Vortices is a comprehensive, up-to-date, research-level overview covering all salient flows in which fluid vortices play a significant role. The various chapters have been written by specialists from North America, Europe and Asia, making for unsurpassed depth and breadth of coverage. Topics addressed include fundamental vortex flows (mixing layer vortices, vortex rings, wake vortices, vortex stability, etc.), industrial and environmental vortex flows (aero-propulsion system vortices, vortex-structure interaction, atmospheric vortices, computational methods with vortices, etc.), and multiphase vortex flows (free-surface effects, vortex cavitation, and bubble and particle interactions with vortices). The book can also be recommended as an advanced graduate-level supplementary textbook. The first nine chapters of the book are suitable for a one-term course; chapters 10--19 form the basis for a second one-term course.

**Face Processing: Advanced Modeling and Methods** Wenyi Zhao, Rama Chellappa, 2011-07-28 Major strides have been made in face processing in the last ten years due to the fast growing need for security in various locations around the globe. A human eye can discern the details of a specific face with relative ease. It is this level of detail that researchers are striving to create with ever evolving computer technologies that will become our perfect mechanical eyes. The difficulty that confronts

researchers stems from turning a 3D object into a 2D image. That subject is covered in depth from several different perspectives in this volume. Face Processing: Advanced Modeling and Methods begins with a comprehensive introductory chapter for those who are new to the field. A compendium of articles follows that is divided into three sections. The first covers basic aspects of face processing from human to computer. The second deals with face modeling from computational and physiological points of view. The third tackles the advanced methods, which include illumination, pose, expression, and more. Editors Zhao and Chellappa have compiled a concise and necessary text for industrial research scientists, students, and professionals working in the area of image and signal processing. Contributions from over 35 leading experts in face detection, recognition and image processing Over 150 informative images with 16 images in FULL COLOR illustrate and offer insight into the most up-to-date advanced face processing methods and techniques Extensive detail makes this a need-to-own book for all involved with image and signal processing

*The Gospel According to Matthew Volume I* Rev. John C. Martin, III, 2010-06-16 The Gospel of Matthew, Volume one, is the first in a six or seven volume set. Three hundred and twenty five sermons were preached, in a seven and a half year period, in public worship, through every word and every verse of the Gospel.

**America's National Game** Albert Goodwill Spalding, 1911 This book is Albert Spalding's work of historic facts concerning the beginning, evolution, development and popularity of base ball, with personal reminiscences of its vicissitudes, its victories and its votaries. Picture Processing by Computer Azriel Rosenfeld, 1969 The field of picture processing by computer is reviewed from a technique-oriented standpoint. Only the processing of given pictures (as opposed to computer-synthesized pictures) is considered. Specific areas covered include: (a) Pictures as information sources and their efficient encoding; (b) Approximation of pictures - sampling and quantization techniques; (c) Position-invariant operations on pictures and their implementation (digital, electro-optical, optical); applications to matched filtering (template matching), spatial frequency filtering and image restoration, measurement of image quality, and image enhancement ('smoothing' and 'sharpening'); (d) Picture properties (linear; local and 'textural'; random) useful for pictorial pattern recognition; (e) 'Figure extraction' from pictures; figure properties (topology, size, shape); (f) Picture description and 'picture languages.' (Author).
