The Reoviridae Wolfgang K. Joklik,2013-11-21 It is now just 20 years since Gomatos and his co-

workers at the Rockefeller University showed that the nucleic acid in reovirus particles is double-stranded RNA (dsRNA). This discovery created great excitement, for dsRNA was at that time under intense investigation as the replicative form of viral genomes consisting of single-stranded RNA. An equally interesting and important finding followed soon after: it was found that the reovirus genome consists, not of a single nucleic acid molecule, but of 10 discrete segments, each with its specific sequence content and each transcribed into its own messenger RNA. It is clear now that these segments are genes. Not surprisingly, the availability of a viral genome 10 unlinked genes has permitted some unique lines of investigation in molecular biology. Mammalian and avian reoviruses proved to be but the first of several viruses recognized as sharing similarity in size and morphology and genomes consisting of 10, 11, or 12 separate genes. These viruses are distributed throughout living organisms; among the natural hosts of members of this virus family are vertebrates, insects, and plants. Members of the Reoviridae family differ widely in the virulence that they exhibit toward their hosts. . . For example, the first discovered mammalian reovirus literally is, as the name signifies, a respiratory enteric orphan virus, that is, a virus unassociated with disease.

Advances in Animal Health, Medicine and Production Antonio Freitas Duarte, Luís Lopes da Costa, 2020-11-21 This book brings together in a review manner a comprehensive summary of high-quality research contributions from the different research teams and their collaborators, to celebrate the 25th anniversary of the Centre for Interdisciplinary Research in Animal Health (CIISA). The topics span from animal behaviour and welfare over biotechnology to clinical veterinary medicine. Thus, the book is of interest for researchers and students working in the diverse fields of veterinary medicine and science. The Centre for Interdisciplinary Research in Animal Health (CIISA), the Research Centre of the Faculty of Veterinary Medicine of the University of Lisbon, commemorated its 25th-year jubilee in 2018. Throughout its history, CIISA has been consolidating as the top-ranking Portuguese Animal and Veterinary Sciences research unit. More recently, CIISA has taken a leading role in the coordination of national and international research networks and consortiums. This conveyed a highly interdisciplinary nature to CIISA's research, encompassing animal, veterinary and biomedical sciences. This multi- and interdisciplinary nature is reflected on the broad scientific background of the team.

Stress and Anxiety Kathleen A. Moore, Petra Buchwald, 2017-06-20 We present this collection of peer-reviewed papers covering a contemporary exploration of old and new concepts in the area of stress, anxiety, and coping. The papers include a consideration of the age-old questions concerning stress and test anxiety and the factors which predict or mediate these to a theoretical discussion of what is stress and how do we measure it. Several papers focus on stress and coping in applied settings, such as among patients with chronic disease, panic disorder, and also in those who play sport. Further papers are devoted to stress and coping in educational and academic settings and examine factors which contribute to students' learning as well as those which influence teachers' occupational stress. The recent emphasis by positive psychologists on resilience as well as coping has also featured here with chapters looking at their contributions to psychological health. However, the question is posed as to whether resilience and coping are cut from the same cloth.

The Mammalian Jaw Walter Stalker Greaves, 2012-07-19 Mammalian skull structure is notably diverse; however at a basic level the jaw mechanism is remarkably similar, if not essentially the same, in the majority of mammals. Using simple models that are compared with real animals at every step, this book examines the basic structural features of the mammalian jaw mechanism from

a mechanical point of view. It explores how the mechanical constraints placed on the jaw have contributed to the evolution of an efficient basic structure, used by many mammals, which precludes mechanical difficulties and uses a minimum amount of bone tissue. Throughout the book the emphasis is on conceptual understanding, with explanations linked together to form a complete story that can be applied to both fossil and extant mammals. Summarising over forty years of research from one of the leading pioneers in 3D jaw mechanics, this is a must-have for anyone interested in mammalian jaw morphology.
