Overcoming School Refusal Joanne Garfi,2018-01-31 School refusal affects up to 5% of children and is a complex and stressful issue for the child, their family and school. The more time a child is away from school, the more difficult it is for the child to resume normal school life. If school refusal becomes an ongoing issue it can negatively impact the child's social and educational development. Psychologist Joanne Garfi spends most of her working life assisting parents, teachers, school counsellors, caseworkers, and community policing officers on how best to deal with school refusal. Now her experiences and expertise are available in this easy-to-read practical book. Overcoming School Refusal helps readers understand this complex issue by explaining exactly what school refusal is and provides them with a range of strategies they can use to assist children in returning to school. Areas covered include: • types of school refusers • why children refuse to go to school • symptoms • short term and long term consequences • accurate assessment • treatment options • what parents can do • what schools can do • dealing with anxious high achievers • how to help children on the autism spectrum with school refusal

Introducing Renewable Energy Paul Matthews,2015-08-03 Introducing Renewable Energy is about renewable energy that you can harness for a small scale 'micro power' project. It is designed to give the reader a view of what renewable energy is, how it works and what it can be used for. The book includes step-by-step instructions for two renewable energy projects, one solar PV and one wind project. However, it is not intended as a detailed 'how to' guide for installing all types of renewable energy system. Renewable energy is a big subject and if you have loftier ambitions than generating a small amount of energy for your own personal use, it is not possible to pack all the information that you are likely to need into a single book. Instead, read this as an introductory guide on the subject that will give you enough grounding for you to extend your knowledge with more specialized information later on. Although this book focuses on small scale renewable energy systems, it also covers larger scale systems at a high level. So if you are interested in finding out about energy production in general, about wind farms, or wish to gain some insight into the emerging title energy technology that promises to revolutionize the way we generate vast quantities of renewable energy in the future, this book will give you an understanding of what is possible with renewable energy, both now and in the near future. Whilst the author is a professional renewable energy engineer, the book has been written for the enthusiastic amateur, or for students who want an easy-to-follow introduction to the subject. It is also a perfect introduction for people who are interested in finding out whether they can install their own solar or wind farm, or other industrial scale renewable energy system, and wanting to get some basic understanding of the technology before they call in the professionals. Once you have read this book, you will have a clear understanding of the different options that exist for small renewable energy projects. If you have a project in mind, it will give you enough information for you to decide what type of renewable energy system is right for you and if all you want is a simple renewable energy system for generating some of your own personal off-grid energy, it will give you the knowledge to put together a simple system yourself.

A Catalogue of the Minerals of Tasmania Ralph Stephen Bottrill,William E. Baker,2008 Catalogues of the minerals found in Tasmania have been kept since almost the earliest days of mining and have been of invaluable assistance to prospectors, mineral explorers, mineralogists and collectors. This catalogue was first published by the Tasmania Department of Mines in 1910, and was extensively revised in 1969. Since then the improvements in technology and further investigations of minerals and mineral deposits have not only increased the number of identified species and data on mineral occurrences, but have also invalidated many previous 'species'. This catalogue extensively updates the previous catalogue. A total of 753 minerals are described, comprising 483 confirmed species, 162 unconfirmed species, 72 variety or invalid names, and 36 series and group names. All entries in the 1969 catalogue have been re-evaluated and are now reclassified as to their known or likely validity. Species invalidated or doubted from the 1969 listing

have been retained, with comments.
