The First Men in the Moon Herbert George Wells, 2023-08-27 Reproduction of the original. The publishing house Megali specialises in reproducing historical works in large print to make reading easier for people with impaired vision.

The First Men in the Moon H. G. Wells, 2019-05-31 As I sit down to write here amidst the shadows of vine-leaves under the blue sky of southern Italy, it comes to me with a certain quality of astonishment that my participation in these amazing adventures of Mr. Cavor was, after all, the outcome of the purest accident. It might have been any one. I fell into these things at a time when I thought myself removed from the slightest possibility of disturbing experiences. I had gone to Lympne because I had imagined it the most uneventful place in the world. Here, at any rate, said I, I shall find peace and a chance to work!

Deep Space Propulsion K. F. Long, 2011-11-25 The technology of the next few decades could possibly allow us to explore with robotic probes the closest stars outside our Solar System, and maybe even observe some of the recently discovered planets circling these stars. This book looks at the reasons for exploring our stellar neighbors and at the technologies we are developing to build space probes that can traverse the enormous distances between the stars. In order to reach the nearest stars, we must first develop a propulsion technology that would take our robotic probes there in a reasonable time. Such propulsion technology has radically different requirements from conventional chemical rockets, because of the enormous distances that must be crossed. Surprisingly, many propulsion schemes for interstellar travel have been suggested and await only practical engineering solutions and the political will to make them a reality. This is a result of the tremendous advances in astrophysics that have been made in recent decades and the perseverance and imagination of tenacious theoretical physicists. This book explores these different propulsion schemes – all based on current physics – and the challenges they present to physicists, engineers, and space exploration entrepreneurs. This book will be helpful to anyone who really wants to understand the principles behind and likely future course of interstellar travel and who wants to recognize the distinctions between pure fantasy (such as Star Trek's 'warp drive') and methods that are grounded in real physics and offer practical technological solutions for exploring the stars in the decades to come.

Rocket and Spacecraft Propulsion Martin J. L. Turner, 2006-08-29 The revised edition of this practical, hands-on book discusses the launch vehicles in use today throughout the world, and includes the latest details on advanced systems being developed, such as electric and nuclear propulsion. The author covers the fundamentals, from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors, to new and future developments. He provides a serious exposition of the principles and practice of rocket propulsion, from the point of view of the user who is not an engineering specialist.

Fads and Fallacies in the Name of Science Martin Gardner, 2012-05-04 Fair, witty appraisal of cranks, quacks, and quackeries of science and pseudoscience: hollow earth, Velikovsky, orgone energy, Dianetics, flying saucers, Bridey Murphy, food and medical fads, and much more.

Forgotten Futures Marcus L. Rowland, 1999-12-01

The History of Science Fiction A. Roberts, 2005-11-28 The History of Science Fiction traces the origin and development of science fiction from Ancient Greece up to the present day. The author is both an academic literary critic and acclaimed creative writer of the genre. Written in lively, accessible prose it is specifically designed to bridge the worlds of academic criticism and SF fandom.

Using Medicine in Science Fiction H. G. Stratmann, 2015-09-14 This book offers a clearly written, entertaining and comprehensive source of medical information for both writers and readers of science fiction. Science fiction in print, in movies and on television all too often presents dubious or simply incorrect depictions of human biology and medical issues. This book explores the real science behind such topics as how our bodies adapt to being in space, the real-life feasibility of common plot elements such as suspended animation and medical nanotechnology, and future prospects for improving health, prolonging our lives, and enhancing our bodies through technology. Each chapter focuses on a single important science fiction-related subject, combining concise factual information with examples drawn from science fiction in all media. Chapters conclude with a "Bottom Line" section summarizing the most important points discussed in the chapter and giving science fiction writers practical advice on how to incorporate them into their own creations, including a list of references for further reading. The book will appeal to all readers interested in learning about the latest ideas on a variety of science fiction-related medical topics, and offers an invaluable reference source for writers seeking to increase the realism and readability of their works. Henry G. Stratmann, MD, FACC, FACP is a cardiologist with board certifications in internal medicine, cardiology, and nuclear cardiology. Before entering private practice he became Professor of Medicine at St. Louis University School of Medicine and performed clinical medical research. Henry received a BA in chemistry from St. Louis University and his MD at Southern Illinois University School of Medicine. He is currently enrolled at Missouri State University to obtain a BS in physics with a minor in astronomy. His professional publications include being an author or coauthor of many research articles for medical journals, primarily in the field of nuclear cardiology. Henry is also a regular contributor of both stories and science fact articles to Analog Science Fiction and Fact.

The Poetics of Science Fiction Peter Stockwell, 2014-06-11 The Poetics of Science Fiction uniquely uses the science of linguistics to explore the literary universe of science fiction. Developing arguments about specific texts and movements throughout the twentieth-century, the book is a readable discussion of this most popular of genres. It also uses the extreme conditions offered by science fiction to develop new insights into the language of the literary context. The discussion ranges from a detailed investigation of new words and metaphors, to the exploration of new worlds, from pulp science fiction to the genre's literary masterpieces, its special effects and poetic expression. Speculations and extrapolations throughout the book engage the reader in thought-experiments and discussion points, with selected further reading making it a useful source book for classroom and seminar.

Collaboration and Resistance in Occupied France C. Lloyd, 2003-09-16 This book is about how people behaved during the German occupation of France during World War Two, and more specifically about how individuals from different social and political backgrounds recorded and reflected on their experiences during and after these tragic events. The book focuses on the concepts of treason and sacrifice, and takes the form of an introductory overview, followed by contextualised case studies in the areas of politics, daily life, civil administration, paramilitary action, literature and film.

The Spinster and the Prophet Brian McKillop, 2011-11-30 Winner of the UBC Medal for Biography and shortlisted for

the Drainie-Taylor Biography Prize. The prolific novelist and social prophet H.G. Wells had a way with words, and usually he had his way with women. That is, until he encountered the feisty Toronto spinster Florence Deeks. In 1925 Miss Deeks launched a \$500,000 lawsuit against Wells, claiming that in an act of literary piracy, Wells had somehow come to use her manuscript history of the world in the writing of his international bestseller *The Outline of History*, a work still in print today. Thus began one of the most sensational and extraordinary cases in Anglo-Canadian publishing and legal history. In this riveting literary whodunit, A.B. McKillop unfolds the parallel stories of two Edwardian figures and the ambition to capture the sweep of history that possessed them both: H.G. Wells was the celebrated writer of autobiographical fiction and futuristic fantasy who, at the end of the Great War, preached the need for a global world order. Florence Deeks was a modest teacher and amateur student of history who intended to correct traditional scholarship's neglect by writing an account of civilization that stressed the contributions of women. Her manuscript was submitted to the venerable Macmillan Company in Canada but was rejected and never published. Wells's opus, completed in an astonishingly short period, was released by the same firm in North America the year following. As the mystery deepens and new evidence is revealed, it seems that the verdict of the courts in Deeks vs Wells may not be that of history. The cast of characters is as intriguing as it is wide in Canada, the United States, and England: renowned publishers and editors, eminent lawyers and judges, leading journalists and all-seeing office secretaries. Not all, it turns out, merited their reputations. Above all, the tale embraces the lives of the philandering Mr. Wells, his wife, and his mistresses, and the scarcely noted Miss Florence Deeks, her family, her life's work, and her search for justice.

Wacky and Wonderful Misconceptions About Our Universe Geoffrey Kirby, 2018-05-25 From unicorns on the Moon to UFOs piloted by Martian bees, this book chronicles some of the strangest ideas that have been put forward – and have actually been believed in -- about our universe. Drawn from tales dating from the Middle Ages to the present, this collection of stories takes readers on an imaginative and wild ride through the ages and minds of some of the wackiest, tackiest, most outlandish concepts in astronomy, cosmology and physics. Follow along as Geoff Kirby recounts each quirky idea in detail and explains how these theories fare against modern astronomical research and technologies.

Relativistic Celestial Mechanics of the Solar System Sergei Kopeikin, Michael Efroimsky, George Kaplan, 2011-10-25 This authoritative book presents the theoretical development of gravitational physics as it applies to the dynamics of celestial bodies and the analysis of precise astronomical observations. In so doing, it fills the need for a textbook that teaches modern dynamical astronomy with a strong emphasis on the relativistic aspects of the subject produced by the curved geometry of four-dimensional spacetime. The first three chapters review the fundamental principles of celestial mechanics and of special and general relativity. This background material forms the basis for understanding relativistic reference frames, the celestial mechanics of N-body systems, and high-precision astrometry, navigation, and geodesy, which are then treated in the following five chapters. The final chapter provides an overview of the new field of applied relativity, based on recent recommendations from the International Astronomical Union. The book is suitable for teaching advanced undergraduate honors programs and graduate courses, while equally serving as a reference for professional research scientists working in relativity and dynamical astronomy. The authors bring their extensive theoretical and practical experience to the subject. Sergei Kopeikin is a professor at the University of Missouri, while Michael Efroimsky and George Kaplan work at the United States Naval Observatory, one of the world's premier institutions for expertise in astrometry, celestial mechanics, and timekeeping.

The Early Fiction of H.G. Wells S. McLean, 2009-04-17 This book explores the relationship between H.G. Wells's scientific romances and the discourses of science in the 1890s and early years of the twentieth century. It investigates how Wells utilizes his early fiction to participate in a range of topical scientific disputes and, increasingly, as a means to instigate social reform.

The Complete Book of Spaceflight David Darling, 2008-04-21 A commanding encyclopedia of the history and principles of spaceflight—from earliest conceptions to faster-than-light galaxy-hopping Here is the first truly comprehensive guide to space exploration and propulsion, from the first musings of the Greeks to current scientific speculation about interstellar travel using warp drives and wormholes. Space buffs will delight in its in-depth coverage of all key manned and unmanned missions and space vehicles—past, present, and projected—and its clear explanations of the technologies involved. Over the course of more than 2,000 extensively cross-referenced entries, astronomer David Darling also provides fascinating insights into the cultural development of spaceflight. In vivid accounts of the major characters and historical events involved, he provides fascinating tales of early innovators, the cross-pollination that has long existed between science fiction and science fact, and the sometimes obscure links between geopolitics, warfare, and advances in rocketry.

Rocket Ship Galileo Robert Anson Heinlein, 2004-12 From the four-time winner of the Hugo Award and the recipient of the Grand Master Nebula Award for Lifetime Achievement comes this classic story—first published in 1947—about pioneers at the dawn of space exploration.

The Yugas Joseph Selbie, David Steinmetz, 2011-08-16 Millions are wondering what the future holds for mankind, and if we are soon due for a world-changing global shift. Paramhansa Yogananda (author of the classic *Autobiography of a Yogi*) and his teacher, Sri Yukteswar, offered key insights into this subject. They presented a fascinating explanation of the rising and falling eras that our planet cycles through every 24,000 years. According to their teachings, we have recently passed through the low ebb in that cycle and are moving to a higher age—an Energy Age that will revolutionize the world. Over one hundred years ago Yukteswar predicted that we would live in a time of extraordinary change, and that much that we believe to be fixed and true—our entire way of looking at the world—would be transformed and uplifted. In *The Yugas*, authors Joseph Selbie and David Steinmetz present substantial and intriguing evidence from the findings of historians and scientists that demonstrate the truth of Yukteswar's and Yogananda's revelations.

A Passion for the Planets William Sheehan, 2010-07-20 Astronomy is by far the most popular of the physical sciences, enticing enough to become a major cultural preoccupation for many, and for some an enthralling scientific activity which veritably rules their lives. What is the nature of that seemingly unstoppable attraction? In this lively and compelling account, William Sheehan – professional psychiatrist, noted historian of astronomy, and incurable observer – explores the nature of that allure through the story of man's visual exploration of the planets. In this volume, the first of a trilogy, Sheehan starts with observational astronomy's profound and lasting effect on his own life, setting the points of embarkation for the journey to come. He travels across the historical landscape seeking the earliest origins of man's compulsion to observe the planets among the

hunter gatherers of the upper palaeolithic, and traces the evolving story from the planetary records of the earliest cities, to Pharonic Egypt through to Hellenistic Greek astronomy culminating in Ptolemy. The necessity to observe played its part in the perceptual changes wrought by the Copernican revolution, as well as the observational advances achieved by such extraordinary characters as Tycho with his sharpest of eyes, and his luxurious practice of total astronomy. The two epochal advances published in 1609, both born through planetary observation, namely Kepler's discovery of the true nature of the orbit of Mars and Harriot and Galileo's observations of the Moon, have a pivotal place in this account. Sheehan weaves a rich tapestry of social and technological settings, patronage and personalities, equipment and skills, cosmologies and goals, motives and compulsions to try to explain why we have observed, and continue to observe, the planets. The compelling text of A Passion for the Planets is enhanced by the specially commissioned planetary artwork of Julian Baum, himself son of a noted planetary observer and historian of planetary observers, and Randall Rosenfeld. A Passion for the Planets will be of interest to all amateur astronomers; active planetary observers; armchair astronomers; those interested in the history of astronomy; the cultural history of science; and astronomical art.

The Time Machine and Other Stories H. G. Wells,2016-09-14 This book is a collection of eight short stories written by H. G. Wells. The Short Stories of H. G. Wells constitutes a must-have for lovers of the short storm form and is not to be missed by fans of Wells' fantastic work. Herbert George Wells (1866 - 1946) was a prolific English writer who wrote in a variety of genres, including the novel, politics, history, and social commentary. Today, he is perhaps best remembered for his contributions to the science fiction genre thanks to such novels as The Time Machine (1895), The Invisible Man (1897), and The War of the Worlds (1898). The Father of Science Fiction was also a staunch socialist, and his later works are increasingly political and didactic. The stories include: The Time Machine, The Empire of the Ants, A Vision of Judgement, The Land Ironclads, The Beautiful Suit, The Door in the Wall, The Pearl of Love, and The Country of the Blind. Many vintage books such as this are becoming increasingly scarce and expensive. We are republishing this book now in an affordable, modern, high-quality edition complete with a specially commissioned new biography of the author.
