Electromagnetics in Biology Makoto Kato, 2007-01-15 This book will serve as an ideal guide to the relatively new and complex field of bioelectromagnetics for students and researchers interested in the interaction of biological systems and electromagnetic fields. Coverage details: (1) biological responses of human and animals, both in vivo and in vitro methodologies, to magnetic and/or electromagnetic field exposure, (2) characteristics of effective fields, (3) hypotheses to explain possible mechanisms of interaction between the fields and cells, and (4) induced current in ELF and induced heat in RF fields as key interaction mechanisms.

Continuous Biomanufacturing Ganapathy Subramanian, 2017-09-12 This is the most comprehensive treatise of this topic available, providing invaluable information on the technological and economic benefits to be gained from implementing continuous processes in the biopharmaceutical industry. Top experts from industry and academia cover the latest technical developments in the field, describing the use of single-use technologies alongside perfusion production platforms and downstream operations. Special emphasis is given to process control and monitoring, including such topics as 'quality by design' and automation. The book is supplemented by case studies that highlight the enormous potential of continuous manufacturing for biopharmaceutical production facilities.

Cell Culture Engineering Wei-Shu Hu, 2010-11-18 Since the introduction of recombinant human growth hormone and insulin a quarter century ago, protein therapeutics has greatly broadened the horizon of health care. Many patients suffering with life-threatening diseases or chronic dysfunctions, which were medically untreatable not long ago, can attest to the wonder these drugs have achieved. Although the first generation of protein therapeutics was produced in recombinant *Escherichia coli*, most recent products use mammalian cells as production hosts. Not long after the first production of recombinant proteins in *E. coli*, it was realized that the complex tasks of most post-translational modifications on proteins could only be efficiently carried out in mammalian cells. In the 1990s, we witnessed a rapid expansion of mammalian-cell-derived protein therapeutics, chiefly antibodies. In fact, it has been nearly a decade since the market value of mammalian-cell-derived protein therapeutics surpassed that of those produced from *E. coli*. A common characteristic of recent antibody products is the relatively large dose required for effective therapy, demanding larger quantities for the treatment of a given disease. This, coupled with the broadening repertoire of protein drugs, has rapidly expanded the quantity needed for clinical applications. The increasing demand for protein therapeutics has not been met exclusively by construction of new manufacturing plants and increasing total volume capacity. More importantly the productivity of cell culture processes has been driven upward by an order of magnitude in the past decade.

Axially Chiral Compounds Bin Tan, 2021-11-22 Axially Chiral Compounds Explore this comprehensive and current volume summarizing the characteristics, synthesis, and applications of axial chirality. Appearing widely in natural products, biologically active molecules, asymmetric chemistry, and material science, axially chiral motifs constitute the core backbones of the majority of chiral ligands and organocatalysts in asymmetric catalysis. In a new work of particular relevance to synthetic chemists, *Axially Chiral Compounds: Asymmetric Synthesis and Applications* delivers a clearly structured and authoritative volume covering the classification, characteristics, synthesis, and applications of axial chirality. A must read for every synthetic chemist practicing today, the book follows the development history, research status, and applications of axial chirality. An introductory chapter familiarizes the reader with foundational material before the distinguished authors describe the different classes and the synthesis of axial chiral compounds used in asymmetric synthesis. The book concludes with a focus on the applications of chiral ligands, chiral catalysts, and materials. Readers will also benefit from the inclusion of: A thorough introduction to asymmetric synthesis, including biaryls atropisomers, heterobiaryls atropisomers, and non-biaryls atropisomers Explorations of chiral allene, spiro skeletons, and natural products Practical discussions of asymmetric transformation, chiral ligands, and chiral catalysts An examination of miscellaneous applications of axially chiral compounds Perfect for organic chemists, chemists working with or on organometallics, catalytic chemists, and materials scientists, *Axially Chiral Compounds: Asymmetric Synthesis and Applications* will also earn a place in the libraries of natural products chemists who seek a one-stop reference for compounds exhibiting axial chirality.

Bram Frank Knives Bram Frank, 2016-05-13 This is a 30+ year look at the knives of Bram Frank. Why he designs knives, the progression of idea, to drawing to CAD and finally to steel. Unification and Supersymmetry Rabindra N. Mohapatra, 2013-06-29 The theoretical understanding of elementary particle interactions has undergone a revolutionary change during the past one and a half decades. The spontaneously broken gauge theories, which in the 1970s emerged as a prime candidate for the description of electro-weak (as well as strong) interactions, have been confirmed by the discovery of neutral weak currents as well as the W^- and Z -bosons. We now have a field theory of electro-weak interactions at energy scales below 100 GeV—the Glashow-Weinberg-Salam theory. It is a renormalizable theory which enables us to do calculations without encountering unnecessary divergences. The burning question now is: What lies ahead at the next level of unification? As we head into the era of supercolliders and ultrahigh energy machines to answer this question, many appealing possibilities exist: left-right symmetry, technicolor, compositeness, grand unification, supersymmetry, supergravity, Kaluza-Klein models, and most recently superstrings that even unify gravity along with other interactions. Experiments will decide if any one or any combination of these is to be relevant in the description of physics at the higher energies. As an outcome of our confidence in the possible scenarios for elementary particle physics, we have seen our understanding of the early universe improve significantly.

Advances in Microbial Ecology Bernhard Schink, 2000-06-30 Volume 16 of *Advances in Microbial Ecology* has a difficult history. Nearly halfway through its completion, Gwynfryn Jones had to resign as managing editor for health reasons, and he asked me to take over. I want to thank

Gwyn for his dedicated work in this publication series, and wish him all the best for the future. After the change in editorship, some authors had to be encouraged on rather short notice to provide their chapters in order to make appearance of this volume possible within a reasonable period of time. Nonetheless, I think that the articles we present with this volume represent an enjoyable collection of up-to-date contributions to microbial ecology. In my own understanding, microbial ecology comprises the elucidation of microbial activities in natural or semi natural environments, including physiology, biochemistry, population dynamics, and interactions with all the biotic and abiotic environmental conditions microbes encounter. This comprises studies on single organisms in defined cultures in an ecological perspective, the analysis of microbial activities in complex environments, as well as the development of concepts for the interactions of microorganisms with the world in which they live. Last but not least, microbial ecology is not an exotic science studied exclusively in remote places untouched by human beings.

Future of solar photovoltaic International Renewable Energy Agency IRENA,2019-11-01 This study presents options to fully unlock the world's vast solar PV potential over the period until 2050. It builds on IRENA's global roadmap to scale up renewables and meet climate goals.

Metal Toxicology Robert A. Goyer,2016-01-22 Metal Toxicology addresses the effects of metals on human health, as well as their mechanisms of toxicity. Unlike most books on metal toxicity which are organized by individual metals, this book is arranged in an organ-by-organ basis. It deals with unifying mechanisms of metal toxicity within a given tissue, and with exposure of a tissue to more than one metal at a time. Unique aspect of organ-specific orientation Written by leading authorities in metal toxicology Chapters of special interest include Risk Assessment, Emerging Technologies, and Molecular Biological Techniques Serves as an excellent sourcebook of generalized information on metal toxicology, allowing for specific tissue-system referencing

Nonclinical Safety Assessment William J. Brock,Kenneth L. Hastings,Kathy M. McGown,2013-04-29 Nonclinical Safety Assessment Nonclinical Safety Assessment A Guide to International Pharmaceutical Regulations Bringing a new drug to market is a costly time-consuming process. Increased regional and international regulation over the last twenty years, while necessary, has only served to amplify these costs. In response to this escalation, developmental strategies have shifted towards a more global approach. In order to create the most cost-effective and safe processes, it is critical for those bringing drugs to market to understand both the globally accepted regulations and the local variations. Nonclinical Safety Assessment: A Guide to International Pharmaceutical Regulations provides a practical description of nonclinical drug development regulations and requirements in the major market regions. It includes: ICH - the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use National regulations, including US FDA, Canada, Mercosur and Brazil, South Africa, China, Japan, India and Australia Repeated dose toxicity studies Carcinogenicity; Genotoxicity; Developmental and reproductive toxicology; Immunotoxicology Biotechnology-derived pharmaceuticals Vaccine development Phototoxicity and photocarcinogenicity Degradants, impurities, excipients and metabolites Primarily intended for those professionals actively involved in the nonclinical and clinical development of a pharmaceutical product, including toxicologists, pharmacologists, clinicians and project managers, this book provides a roadmap for successful new drug approval and marketing.

Precision Medicine in Cancer Therapy Daniel D. It also discusses emerging technologies that are making a significant impact on precision medicine in cancer therapy. In addition to describing specific approaches that have already entered clinical practice, the book explores new concepts and tools that are being developed. Precision medicine aims to deliver personalized healthcare tailored to a patient's genetics, lifestyle and environment, and cancer therapy is one of the areas in which it has flourished in recent years. Documenting the latest

advances, this book is of interest to physicians and clinical fellows in the front line of the war on cancer, as well as to basic scientists working in the fields of cancer biology, drug development, biomarker discovery, and biomedical engineering. Arterial Chemoreceptors Ronan G. O'Regan, Philip Nolan, Daniel S. McQueen, David J. Paterson, 2012-10-24 The International Society for Arterial Chemoreception (ISAC) was founded in August 1988 during the 9th International Symposium on Arterial Chemoreception which was held at Park City, Utah, USA. ISAC was established with the aim of providing a framework to support the increasing number of investigators from a wide variety of disciplines (anatomists, pathologists, respiratory physiologists and clinicians, high altitude physiologists, biochemists, biophysicists, physiologists and pharmacologists) who share a common interest in arterial chemoreception. ISAC took over the co-ordination of the international chemoreceptor meetings, with the membership deciding the venue for forthcoming meetings. During the Park City symposium Dublin was selected to host the 1993 meeting, under the Presidency of Professor Ronan O'Regan. The 12th International Meeting on Arterial Chemoreception, which was held in Dublin in August 1993, was acclaimed as a great success by all those present. The delegates not only shared in a wide-ranging feast of chemoreceptor based science, they had plenty of opportunity during the meeting for renewing acquaintances and establishing new friendships. The location for the meeting at University College Dublin's modern Belfield campus helped to promote such interaction, and the social programme was outstanding.

From Molecules to Crystallizers R. Davey, John Garside, 2000 This work examines crystallisation, one of the oldest separation processes used in the chemical industry and still one of the most important.

Crystals Ichiro Sunagawa, 2007-08-13 How do crystals nucleate and grow? Why and how do crystals form such a wide variety of morphologies, from polyhedral to dendritic and spherulitic forms? These are questions that have been posed since the seventeenth century, and are still of vital

importance today both for modern technology, and to understand the Earth's interior and the formation of minerals by living organisms. In this book, Ichiro Sunagawa sets out clearly the atomic processes behind crystal growth, and describes case studies of complex systems from diamond, calcite and pyrite, to crystals formed through biomineralization, such as the aragonite of shells, and apatite of teeth. Essential reading for advanced graduates and researchers in mineralogy and materials science.
