Saints Around the World Meg Hunter-Kilmer,2021-08-16 The lives of the Saints are one of the most powerful ways God draws people to himself, showing us the love and the joy we can find in him. But so often, these Saints seem distant—impossibly holy or dull or unlike us in race and age and state in life. In *Saints Around the World*, you'll meet over one-hundred Saints from more than sixty countries, including Saints with different disabilities, strengths, and struggles. The beautiful illustrations and captivating storytelling will introduce you and your children to new heavenly friends while also helping you fall more in love with Jesus. Each story in this book is written not only to capture the imagination but also to speak about God's tremendous love and our call to be saints. There are stories in *Saints Around the World* for when you feel like life isn't fair, when people are being unkind to you, when you've made a terrible mistake, when you're struggling at school, when prayer is hard. And there are stories of shouting down Nazis, of fleeing a murderous villain, of making scientific discoveries, of smoking a cigar while enemy soldiers amputate your leg. There are scared Saints, brilliant Saints, weak Saints, adventurous Saints, abused Saints, overjoyed Saints, disabled Saints—and the point of every one of them is the love of God. Whether you're checking the map to find Saints who look like you or perusing the extensive indices to find Saints with your skills or struggles, you'll find countless stories in this book that remind you how very possible holiness is.

Tactical Biopolitics Beatriz Da Costa, Kavita Philip, 2010-08-13 Scientists, scholars, and artists consider the political significance of recent advances in the biological sciences. Popular culture in this “biological century” seems to feed on proliferating fears, anxieties, and hopes around the life sciences at a time when such basic concepts as scientific truth, race and gender identity, and the human itself are destabilized in the public eye. *Tactical Biopolitics* suggests that the political challenges at the intersection of life, science, and art are best addressed through a combination of artistic intervention, critical theorizing, and reflective practices. Transcending disciplinary boundaries, contributions to this volume focus on the political significance of recent advances in the biological sciences and explore the possibility of public participation in scientific discourse, drawing on research and practice in art, biology, critical theory, anthropology, and cultural studies. After framing the subject in terms of both biology and art, *Tactical Biopolitics* discusses such topics as race and genetics (with contributions from leading biologists Richard Lewontin and Richard Levins); feminist bioscience; the politics of scientific expertise; bioart and the public sphere (with an essay by artist Claire Pentecost); activism and public health (with an essay by Treatment Action Group co-founder Mark Harrington); biosecurity after 9/11 (with essays by artists' collective Critical Art Ensemble and anthropologist Paul Rabinow); and human-animal interaction (with a framing essay by cultural theorist Donna Haraway). Contributors Gaymon Bennett, Larry Carbone, Karen Cardozo, Gary Cass, Beatriz da Costa, Oron Catts, Gabriella Coleman, Critical Art Ensemble, Gwen D'Arcangelis, Troy Duster, Donna Haraway, Mark Harrington, Jens Hauser, Kathy High, Fatimah Jackson, Gwyneth Jones, Jonathan King, Richard Levins, Richard Lewontin, Rachel Mayeri, Sherie McDonald, Claire Pentecost, Kavita Philip, Paul Rabinow, Banu Subramanian, subRosa, Abha Sur, Samir Sur, Jacqueline Stevens, Eugene Thacker, Paul Vanouse, Ionat Zurr

Physics of the Impossible Michio Kaku, 2008-03-11 NATIONAL BESTSELLER • Inspired by the fantastic worlds of Star Trek, Star Wars, and Back to the Future, the renowned theoretical physicist and national bestselling author of The God Equation takes an informed, serious, and often surprising look at what our current understanding of the universe's physical laws may permit in the near and distant future. Teleportation, time machines, force fields, and interstellar space ships—the stuff of science fiction or potentially attainable future technologies? Entertaining, informative, and imaginative, Physics of the Impossible probes the very limits of human ingenuity and scientific possibility.

100 Great War Movies Robert J. Niemi, 2018-04-04 This book serves as a fascinating guide to 100 war films from 1930 to the present. Readers interested in war movies will learn surprising anecdotes about these films and will have all their questions about the films' historical accuracy answered. This cinematic guide to war movies spans 800 years in its analysis of films from those set in the 13th century Scottish Wars of Independence (Braveheart) to those taking place during the 21st-century war in Afghanistan (Lone Survivor). World War II has produced the largest number of war movies and continues to spawn recently released films such as Dunkirk. This book explores those, but also examines films set during such conflicts as the Napoleonic Wars, the American Civil War, World War I, the Vietnam War, and the wars in Afghanistan and Iraq. The book is organized alphabetically by film title, making it easy to navigate. Each entry is divided into five sections: Background (a brief discussion of the film's genesis and financing); Production (information about how, where, and when the film was shot); Synopsis (a detailed plot summary); Reception (how the film did in terms of box office, awards, and reviews) and Reel History vs. Real History (a brief analysis of the film's historical accuracy). This book is ideal for readers looking to get a vivid behind-the-scenes look at the greatest war movies ever made.

The Essential Cult TV Reader David Lavery, 2021-09-15 The Essential Cult TV Reader is a collection of insightful essays that examine television shows that amass engaged, active fan bases by employing an imaginative approach to programming. Once defined by limited viewership, cult TV has developed its own identity, with some shows gaining large, mainstream audiences. By exploring the defining characteristics of cult TV, The Essential Cult TV Reader traces the development of this once obscure form and explains how cult TV achieved its current status as legitimate television. The essays explore a wide range of cult programs, from early shows such as Star Trek, The Avengers, Dark Shadows, and The Twilight Zone to popular contemporary shows such as Lost, Dexter, and 24,

addressing the cultural context that allowed the development of the phenomenon. The contributors investigate the obligations of cult series to their fans, the relationship of camp and cult, the effects of DVD releases and the Internet, and the globalization of cult TV. *The Essential Cult TV Reader* answers many of the questions surrounding the form while revealing emerging debates on its future.

The Matrix of Visual Culture Patricia Pisters, 2003 This book explores Gilles Deleuze's contribution to film theory. According to Deleuze, we have come to live in a universe that could be described as metacinematic. His conception of images implies a new kind of camera consciousness, one that determines our perceptions and sense of selves: aspects of our subjectivities are formed in, for instance, action-images, affection-images and time-images. We live in a matrix of visual culture that is always moving and changing. Each image is always connected to an assemblage of affects and forces. This book presents a model, as well as many concrete examples, of how to work with Deleuze in film theory. It asks questions about the universe as metacinema, subjectivity, violence, feminism, monstrosity, and music. Among the contemporary films it discusses within a Deleuzian framework are *Strange Days*, *Fight Club*, and *Dancer in the Dark*.

The Poetics of Science Fiction Peter Stockwell, 2014-06-11 *The Poetics of Science Fiction* uniquely uses the science of linguistics to explore the literary universe of science fiction. Developing arguments about specific texts and movements throughout the twentieth-century, the book is a readable discussion of this most popular of genres. It also uses the extreme conditions offered by science fiction to develop new insights into the language of the literary context. The discussion ranges from a detailed investigation of new words and metaphors, to the exploration of new worlds, from pulp science fiction to the genre's literary masterpieces, its special effects and poetic expression.

Speculations and extrapolations throughout the book engage the reader in thought-experiments and discussion points, with selected further reading making it a useful source book for classroom and seminar.

The Village Voice Film Guide Village Voice,2010-12-15 For decades the Village Voice set the benchmark for passionate, critical, and unique film coverage. Including reviews by some of America's most respected critics, The Village Voice Film Guide compiles spirited landmark reviews of the Voice's selection of the 150 greatest films ever made. Collecting some of the best writing on film ever put on paper, this is a perfect book for film buffs.

Hollyweird Science: The Next Generation Kevin R. Grazier,Stephen Cass,2017-08-02 Informative, entertaining and upbeat, this book continues Grazier and Cass's exploration of how technology, science, and scientists are portrayed in Hollywood productions. Both big and small-screen productions are featured and their science content illuminated—first by the authors and subsequently by a range of experts from science and the film world. Starring roles in this volume are played by, among other things, computers (human and mechanical), artificial intelligences, robots, and spacecraft. Interviews with writers, producers, and directors of acclaimed science-themed films stand side by side with the perspectives of scientists, science fiction authors, and science advisors. The result is a stimulating and informative reading experience for the layperson and professional scientist or engineer alike. The book begins with a foreword by Zack Stentz, who co-wrote *X-Men: First Class* and *Thor*, and is currently a writer/producer on CW's *The Flash*.

The Digital Nexus Raphael Foshay,2016-02-01 Over half a century ago, in *The Gutenberg Galaxy* (1962), Marshall McLuhan noted that the overlap of traditional print and new electronic media like radio and television produced widespread upheaval in personal and public life: Even without collision, such co-existence of technologies and awareness brings trauma and tension to every living person. Our most ordinary and conventional attitudes seem suddenly twisted into gargoyles and grotesques. Familiar institutions and associations seem at times menacing and malignant. These multiple transformations, which are the normal consequence of introducing new media into any society whatever, need special study. The trauma and tension in the daily lives of citizens as described here by McLuhan was only intensified by the arrival of digital media and the Web in the following decades. The rapidly evolving digital realm held a powerful promise for creative and constructive good—a promise so alluring that much of the inquiry into this new environment focused on its potential rather than its profound impact on every sphere of civic, commercial, and private life. The totalizing scope of

the combined effects of computerization and the worldwide network are the subject of the essays in *The Digital Nexus*, a volume that responds to McLuhan's request for a "special study" of the tsunami-like transformation of the communication landscape. These critical excursions provide analysis of and insight into the way new media technologies change the workings of social engagement for personal expression, social interaction, and political engagement. The contributors investigate the terms and conditions under which our digital society is unfolding and provide compelling arguments for the need to develop an accurate grasp of the architecture of the Web and the challenges that ubiquitous connectivity undoubtedly delivers to both public and private life. Contributions by Ian Angus, Maria Bakardjieva, Daryl Campbell, Sharone Daniel, Andrew Feenberg, Raphael Foshay, Carolyn Guertin, David J. Gunkel, Bob Hanke, Leslie Lindballe, Mark McCutcheon, Roman Onufrijchuk, Josipa G. Petrunić, Peter J. Smith, Lorna Stefanick, Karen Wall.

Mechanical Design Engineering Handbook Peter R. N. Childs, 2013-09-02 *Mechanical Design Engineering Handbook* is a straight-talking and forward-thinking reference covering the design, specification, selection, use and integration of machine elements fundamental to a wide range of engineering applications. Develop or refresh your mechanical design skills in the areas of bearings, shafts, gears, seals, belts and chains, clutches and brakes, springs, fasteners, pneumatics and hydraulics, amongst other core mechanical elements, and dip in for principles, data and calculations as needed to inform and evaluate your on-the-job decisions. Covering the full spectrum of common mechanical and machine components that act as building blocks in the design of mechanical devices, *Mechanical Design Engineering Handbook* also includes worked design scenarios and essential background on design methodology to help you get started with a problem and repeat selection processes with successful results time and time again. This practical handbook will make an ideal shelf reference for those working in mechanical design across a variety of industries and a valuable learning resource for advanced students undertaking engineering design modules and projects as part of broader mechanical, aerospace, automotive and manufacturing programs. Clear, concise text explains key component technology, with step-by-step procedures, fully worked design scenarios, component images and cross-sectional line drawings all incorporated for ease of understanding. Provides essential data, equations and interactive ancillaries, including calculation spreadsheets, to inform decision making, design evaluation and incorporation of components into overall designs. Design procedures and methods covered include references to national and international standards where appropriate.
