Ford Tough Patrick R. Foster, 2017-06-01 Get Fords complete story in Ford Tough: 100 Years of Ford Trucks and see why they've dominated the truck market, selling 1.5 million trucks every year in the US alone. In July 1917 Ford Motor Company introduced a one-ton chassis for commercial trucks, marking what many historians feel was its official entry into the dedicated truck business. Sure, after-market pickup beds could be added to a Model T car to convert it to a pickup, but with the debut of the rugged Model TT truck chassis, Ford was firmly in the truck market. Eight years later, Ford introduced its first factory-produced pickup, a sturdy half-ton job the public loved. During the century that has passed since that first Ford truck chassis, the F-series has become the best-selling truck in the world, and the best-selling vehicle of any type in America. Ford Tough: 100 Years of Ford Trucks tells the entire Ford truck story from the very beginning, when Ford got its start in truck production. This book provides the history of the wide array of models Ford has built over the past century, including the Model A roadster pick-up, stylish 81C pickups, legendary 1948 F-1, Bronco, Courier, Ranchero, and Econoline.

Next the bottom plate on the crank case is removed and all the connecting rods loosened up which permits of pushing the pistons out through the top of the cylinder if desired. The cooling fan and the fan belt are removed and placed with the radiator where they will be out of the way. At Fig. 68 the dash assembly is just loose enough to be raised from the frame when necessary and one of the workmen is loosening the cylinder head retention bolts before the engine is lifted out of the frame on account of the superior

purchase or grip afforded when the engine is in place. The workman at the right is loosening the fan bracket adjusting bolt in order to take off the fan. After the cylinder head is removed the next operation is to carefully take off the gasket which will be found on top of the cylinder casting. This is done by prying it away from the cylinder block gradually with a screw driver or other similar implement. The next step is to remove the inlet and exhaust manifolds which is done by unloosening the stirrups or clamps holding these in place as shown at Fig. 70. This exposes the valve chamber covers which may be removed as outlined at Fig. 71. The method of taking the piston out through the top of the cylinder head after the connecting rod cap has been removed from the crank shaft is clearly shown at Fig. 72. The top half of the...

in that the original adjustment can be jotted down. Aside from the small boxes on top of the bench a large box should be placed underneath. This is to care for large parts such as intake and exhaust manifolds, connecting rods, the fan, the carburetor and other parts of the assembly. In other Avords, the large box receives parts of which there is no doubt as to location. System in removing parts will eventually lead to a saving of time when assembly is necessary. For example when the valve system is removed, the valves, the springs, spring seats and the holding pins should be kept together as shown in illustration Fig. 67, B. Slip the washer over the bolt and screw the nut in place and then throw the whole into the proper box. When the wrist pins are removed the clamp screw for holding the pin in place should be left in the hole in the connecting rod boss. When the manifolds are removed, instead of throwing the holding nuts into one box and the manifold in another, screw the nuts back onto the studs in the cylinder. The object of all this immediate replacement is to keep the parts as near to their proper

places as possible so that when assembly begins the operator will not be in doubt as to where to look for a certain rod bolt or other part. How To Take Down Motor.--The first step in removing the Ford engine from the frame is to drain the water from the radiator by...
