A Civic Utopia Basile Baudez, R. Nicholas Olsberg, 2016 Expanding upon a selection of architectural drawings from the exhibition that it accompanies, this book traces how a new model of the modern French city emerged in Enlightenment-era France. Architectural drawings of public buildings and public spaces served as models for the expression of an ordered and open civic life as the foundation of an ideal polity.

**Architecture** Francis D. K. Ching, 2012-07-16 A superb visual reference to the principles of architecture Now including interactive CD-ROM! For more than thirty years, the beautifully illustrated *Architecture: Form, Space, and Order* has been the classic introduction to the basic vocabulary of architectural design. The updated Third Edition features expanded sections on circulation, light, views, and site context, along with new considerations of environmental factors, building codes, and contemporary examples of form, space, and order. This classic visual reference helps both students and practicing architects understand the basic vocabulary of architectural design by examining how form and space are ordered in the built environment. Using his trademark meticulous drawing, Professor Ching shows the relationship between fundamental elements of architecture through the ages and across cultural boundaries. By looking at these seminal ideas, *Architecture: Form, Space, and Order* encourages the reader to look critically at the built environment and promotes a more evocative understanding of architecture. In addition to updates to content and many of the illustrations, this new edition includes a companion CD-ROM that brings the book's architectural concepts to life through three-dimensional models and animations created by Professor Ching.

*eWork and eBusiness in Architecture, Engineering and Construction* Gudni Gudnason, Raimar Scherer, 2012-07-06 Since 1994, the European Conferences of Product and Process Modelling ([www.ecppm.org](http://www.ecppm.org)) have provided a review of research, development and industrial implementation of product and process model technology in the Architecture, Engineering, Construction and Facilities Management (AEC/FM) industry. Product/Building Information Modelling has matured significantly in the last few years and has never been closer to having a permanent impact on the AEC/FM industry as a mainstream technology. In this context the 9th European Conference of Product and Process Modelling provided a forum for leading experts to discuss the latest achievements, emerging trends and future directions in product and process modelling technology in this dynamic and fragmented industry, focusing on integrated project working, value-based life cycle management and intelligent and sustainable buildings and construction. eWork and

eBusiness in Architecture, Engineering and Construction 2012 provides a comprehensive overview of topics including BIM in all life-cycle stages, ICT for energy efficiency, smart buildings and environmental performance, energy and building simulation, knowledge and semantic modelling, visualization technologies as well as tools and methods to support innovations in design and construction processes. It further includes the proceedings of the 3rd Workshop on eeBuildings Data Models (Energy Efficiency Vocabularies), which aim to identify ICT Energy Efficiency Vocabularies and Ontologies to foster interoperability of Energy Efficiency Management Systems. eWork and eBusiness in Architecture, Engineering and Construction 2012 will be of interest to academics and professionals working in the interdisciplinary area of information technology in architecture, engineering and construction.

A Pattern Language Christopher Alexander, 2018-09-20 You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely. The three books are *The Timeless Way of Building*, *The Oregon Experiment*, and this book, *A Pattern Language*. At the core of these books is the idea that people should design for themselves their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain languages, which, like the languages we speak, allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. Patterns, the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seems likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

**The Architecture of the École Des Beaux-arts** Richard Chafee, 1977 Here, for the first time in this century, is an opportunity to reexamine the philosophy of the Beaux-Arts school of architecture, whose two-hundred-year history represented the body of ideas and buildings against which the modern movement rebelled. Based on the doctrines of

architecture formulated by the French Academy during the eighteenth century, the Ecole des Beaux-Arts system of instruction stressed drawing as the primary means of visualizing architectural form. The Concours du Grand Prix de Rome was the ultimate test of ability, and thus the index of the Academy's ideals throughout this period. This book reproduces, in more than 200 drawings, projects for the Grand Prix and for virtually every other type of competition or assignment at the Ecole des Beaux-Arts. Included are drawings by students who subsequently became preeminent as professional architects—among them Henri Labrouste, architect of the Bibliotheque Sainte-Genieveve, and Charles Garnier, architect of the Paris Opera. All illustrations are accompanied by extensive explanatory captions, and a selection of important larger studies appear on specially folded inserts, enabling the reader to view them in unusually clear and precise detail. Complementing the student work reproduced here is a selection of photographs by major Beaux-Arts buildings executed in France and the United States. In all, the book contains 423 illustrations, 23 in color, and 10 inserts. The Architecture of the Ecole des Beaux-Arts offers an enlightening analysis of the school. The authors examine Beaux-Arts concepts of theory and practice and assess major work by each of the school's main factions. The essay by Richard Chafee covers the school's complex political and administrative history and is followed by a survey of the school's evolving notions of architectural composition—from Charles Percier through Garnier—by David Van Zanten. Neil Levine discusses the emergence of the Neo-Grec and the ideas of Labrouste, which in their preoccupation with literature and meaning in architecture parallel some recent concerns. In the final essay, Arthur Drexler examines such issues as the uses of the past, the ethical implications of style versus non-style, and the techniques of visualizing buildings that have influenced the development of modern architecture.

**The Language of Architecture** Andrea Simitch, Val Warke, 2014-06-01 DIV Learning a new discipline is similar to learning a new language; in order to master the foundation of architecture, you must first master the basic building blocks of its language – the definitions, function, and usage. Language of Architecture provides students

*Experiencing Architecture, second edition* Steen Eiler Rasmussen, 1964-03-15 A classic examination of superb design through the centuries. Widely regarded as a classic in the field, *Experiencing Architecture* explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for place, materials and use, resulting in "a remarkably suitable comeliness." While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional

experience of architecture as an abstract, individual pursuit, but also from one's shared, everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. Experiencing Architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered “what instrument the architect plays on.”

*The Image of the City* Kevin Lynch,1964-06-15 The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

**The Architecture of the City** Aldo Rossi,1984-09-13 Aldo Rossi was a practicing architect and leader of the Italian architectural movement La Tendenza and one of the most influential theorists of the twentieth century. The Architecture of the City is his major work of architectural and urban theory. In part a protest against functionalism and the Modern Movement, in part an attempt to restore the craft of architecture to its position as the only valid object of architectural study, and in part an analysis of the rules and forms of the city's construction, the book has become immensely popular among architects and design students.
