Fundamentals of Robotics Prof Charria,2013-10-11 Do you like robots? This book is intended as a reading book for children from 5 to 80 years old (ok, ok...from 5 to 8). Caution: This book requires that both, parents and children, work together at least 15 minutes a day on reading and assembling some robot pieces (only the printed version). Then main objective is to encourage parents and children to share quality time while learning by getting involved on two basic activities : Reading just one page and assembling just one of the robot's parts every day. The idea is that every

parent and his(her) child spend some few minutes every day practicing reading, explaining the concepts for reading comprehension and learning about robotics. Every book has vocabulary for parents to help children to understand some difficult words from the world of Robots. Additionally, with very simple tools like glue and scissors, parents and children build the robot's parts, but again it's recommended to make just one robot part per day. This activity help to build children's imagination and creativity . It is a wonderful way to develop fine motor skills and something very important nowadays: patience. There are no instructions on how to fold the pieces. You don't have to worry because it's not that difficult and this exercise can help children to figure out geometric figures. Every reading session becomes a fun activity while kids see their own progress in several ways. The more they read the closer they get to have their paper-craft robot as a final reward. Automated printing has limitations and though the desire is to have the paper-craft robot on a sheet with good thickness, we had to use the same paper thickness of the interior pages. Sorry no much control on this issue.
