The Archaeology of Time Gavin Lucas,2004-11-10 It might seem obvious that time lies at the heart of archaeology, since archaeology is about the past. However, the issue of time is complicated and often problematic, and although we take it very much for granted, our understanding of time affects the way we do archaeology. This book is an introduction not just to the issues of chronology and dating, but time as a theoretical concept and how this is understood and employed in contemporary archaeology. It provides a full discussion of chronology and change, time and the nature of the archaeological record, and the perception of time and history in past societies. Drawing on a wide range of archaeological examples from a variety of regions and periods, *The Archaeology of Time* provides students with a crucial source book on one of the key themes of archaeology.

**Satellite Orbits** Oliver Montenbruck,Eberhard Gill,2012-12-06 This modern presentation guides readers through the theory and practice of satellite orbit prediction and determination. Starting from the basic principles of orbital mechanics, it covers elaborate force models as well as precise methods of satellite tracking. The accompanying CD-ROM includes source code in C++ and relevant data files for applications. The result is a powerful and unique spaceflight dynamics library, which allows users to easily create software extensions. An extensive collection of frequently updated Internet resources is provided through WWW hyperlinks.

**Rockets of the World** Peter Alway,1999

*A Theoretical Study of the Torques Induced by a Magnetic Field on Rotating Cylinders and Spinning Thin-wall Cones, Cone Frustums, and General Body of Revolution* George Louis Smith,United States. National Aeronautics and Space Administration,1962 The electromagnetic field equations are applied to nonferromagnetic conducting thin-wall cylinders, cones, and cone frustums, with extension to the general thin-wall body of revolution slowly spinning in a homogeneous magnetic field, in order to calculate the induced eddy currents and resulting torques. The solutions to these cases have direct application in calculating the magnetic torques tending to damp the rotation of spinning and tumbling satellites.

Rocket and Spacecraft Propulsion Martin J. L. Turner,2006-08-29 The revised edition of this practical, hands-on book discusses the launch vehicles in use today throughout the world, and includes the latest details on advanced systems being developed, such as electric and nuclear propulsion. The author covers the fundamentals, from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors, to new and future developments. He provides a serious exposition of the principles and practice of rocket propulsion, from the point of view of the user who is not an engineering specialist.

**Archaeology Anthropology and Interstellar Communication** Douglas A. Douglas A. Vakoch,2015-03-24 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

Tracks orbital debris hazard creation, research, observation, experimentation, management, mitigation, protection, and policy. Includes debris-producing, events; U.N. orbital debris treaties, Space Shuttle and space station orbital debris issues; ASAT tests; milestones in theory and modeling; uncontrolled reentries; detection system development; shielding development; geosynchronous debris issues, including reboost policies: returned surfaces studies, seminar papers reports, conferences, and studies; the increasing effect of space activities on astronomy; and growing international awareness of the near-Earth environment.

**Space Systems Failures** David M. Harland, Ralph Lorenz, 2007-09-14 The very first book on space systems failures written from an engineering perspective. Focuses on the causes of the failures and discusses how the engineering knowledge base has been enhanced by the lessons learned. Discusses non-fatal anomalies which do not affect the ultimate success of a mission, but which are failures nevertheless. Describes engineering aspects of the spacecraft, making this a valuable complementary reference work to conventional engineering texts.

## **Remote Sensing by Satellite Gravimetry** Thomas Gruber,Annette Eicker,Frank

Flechtner,2021-01-19 Over the last two decades, satellite gravimetry has become a new remote sensing technique that provides a detailed global picture of the physical structure of the Earth. With the CHAMP, GRACE, GOCE and GRACE Follow-On missions, mass distribution and mass transport in the Earth system can be systematically observed and monitored from space. A wide range of Earth science disciplines benefit from these data, enabling improvements in applied models, providing new insights into Earth system processes (e.g., monitoring the global water cycle, ice sheet and glacier melting or sea-level rise) or establishing new operational services. Long time series of mass transport data are needed to disentangle anthropogenic and natural sources of climate change impacts on the Earth system. In order to secure sustained observations on a long-term basis, space agencies and the Earth science community are currently planning future satellite gravimetry mission concepts to enable higher accuracy and better spatial and temporal resolution. This Special Issue provides examples of recent improvements in gravity observation techniques and data processing and analysis, applications in the fields of hydrology, glaciology and solid Earth based on satellite gravimetry data, as well as concepts of future satellite constellations for monitoring mass transport in the Earth system.
