A Successful Transformation? Petr Pavlínek, 2008-04-30 This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

Applied Strength of Materials Robert L. Mott, Joseph A. Untener, 2016-11-17 Designed for a first course in strength of materials, *Applied Strength of Materials* has long been the bestseller for Engineering Technology programs because of its comprehensive coverage, and its emphasis on sound fundamentals, applications, and problem-solving techniques. The combination of clear and consistent problem-solving techniques, numerous end-of-chapter problems, and the integration of both analysis and design approaches to strength of materials principles prepares students for subsequent courses and professional practice. The fully updated Sixth Edition. Built around an educational philosophy that stresses active learning, consistent reinforcement of key concepts, and a strong visual component, *Applied Strength of Materials*, Sixth Edition continues to offer the readers the most thorough and understandable approach to mechanics of materials.

A New Direction for China's Defense Industry Evan S. Medeiros, Roger Cliff, Keith Crane, James C. Mulvenon, 2005-12-19 Since the early 1980s, a prominent and consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study

argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

Kremlin Kontrol Timothy L Thomas, 2020-11-09 Kremlin Kontrol by Timothy L. Thomas The Asymmetric Warfare Group (AWG) serves as the United States Army's global scouts. We leverage direct observations of the operational environment, emerging threat capabilities, and friendly gaps to advise the operational force. Our observations inform doctrine, organization, training, materiel, leader development, personnel, facilities, and policy solutions. Since our establishment in 2006, part of our mission has been anticipating asymmetric threats and seeing over the next hilltop. One of the threats we see on the horizon is that posed by Private Military Companies (PMCs). PMCs are proliferating worldwide and play an increasingly important role in competition and conflict. Specifically, PMCs based in the Russian Federation have been active in Europe, the Middle East, and Africa. They are of increasing concern to commanders worldwide, from the tactical to the strategic level. Why buy a book you can download for free? We print the paperback book so you don't have to. Characterizing the North Korean Nuclear Missile Threat Markus

Schiller,2012-09-26 The security community generally believes that North Korea has a relatively sophisticated guided ballistic missile program. This report questions this view and seeks to better characterize the North Korean missile threat. The author compares the available data on the North Korean missile program against five hypotheses about the program's origins, sophistication, and scale, highlighting inconsistencies.

Chinese Anti-Ship Ballistic Missile (ASBM) Development Andrew S. Erickson,2016-08-02

China's anti-ship ballistic missile (ASBM), the DF-21D, has reached the equivalent of Initial Operational Capability. Although it probably has been deployed in small numbers, additional challenges and tests remain. This study examines the ASBM's capability and history, showing how the DF-21D meets multiple priorities in Chinese defense modernization and in the national security bureaucracy, as well its implications for the United States. The ASBM's physical threat to U.S. Navy ships will be determined by the

development of associated systems and organizations, which currently limit data fusion and coordination in the complex task of identifying a U.S. aircraft carrier in the open ocean. Still, the ASBM poses a direct threat to the foundations of U.S. power project in Asia and will undermine the U.S. position, unless efforts to counter its political-military effects are taken.

Fangs of the Lone Wolf Dodge Billingsley, 2013-10-19 Stories of combat from a man who embedded with Chechen guerrilla forces: “His insights . . . are second to none.” —Thomas de Waal, author of *Black Garden* Books on guerrilla war are seldom written from the tactical perspective, and even less seldom from the guerrilla’s perspective. *Fangs of the Lone Wolf: Chechen Tactics in the Russian-Chechen Wars 1994-2009* is an exception. These are the stories of low-level guerrilla combat as told by the survivors. They cover fighting from the cities of Grozny and Argun to the villages of Bamut and Serzhen-yurt, and finally the hills, river valleys, and mountains that make up so much of Chechnya. The author embedded with Chechen guerrilla forces and knows the conflict, country, and culture. Yet, as a Western outsider, he is able to maintain perspective and objectivity. He traveled extensively to interview Chechen former combatants now displaced, some in hiding or on the run from Russian retribution and justice. Crisp narration, organization by type of combat, accurate color maps, and insightful analysis and commentary help to convey the complexity of “simple guerrilla tactics” and the demands on individual perseverance and endurance that guerrilla warfare exacts. The book is organized into vignettes that provide insight on the nature of both Chechen and Russian tactics utilized during the two wars. They show the chronic problem of guerrilla logistics, the necessity of digging in fighting positions, the value of the correct use of terrain and the price paid in individual discipline

and unit cohesion when guerrillas are not bound by a military code and law. Guerrilla warfare is probably as old as man, but has been overshadowed by maneuver war by modern armies and recent developments in the technology of war. As Iraq, Afghanistan, the Philippines, and Chechnya demonstrate, guerrilla war is not only still viable, but increasingly common. Fangs of the Lone Wolf provides a unique insight into what is becoming modern and future war. Includes maps and photographs

Battle for Budapest Krisztián Ungváry, 2011-08-30 This title is presented with a new foreword by Istvan Deak. The battle of Budapest in the bleak winter of 1944-45 was one of the longest and bloodiest city sieges of World War II. From the appearance of the first Soviet tanks on the outskirts of the capital to the capture of Buda Castle, 102 days elapsed. In terms of human trauma, it comes second only to Stalingrad, comparisons to which were even being made by soldiers, both German and Soviet, fighting at the time. This definitive history covers their experiences, and those of the 800,000 non-combatants around whom the battle raged.

Intelligent Transportation Systems - Problems and Perspectives Aleksander Ślaskowski, Wiesław Pamuła, 2015-06-24 This book presents a discussion of problems encountered in the deployment of Intelligent Transport Systems (ITS). It puts emphasis on the early tasks of designing and proofing the concept of integration of technologies in

Intelligent Transport Systems. In its first part the book concentrates on the design problems of urban ITS. The second part of the book features case studies representative for the different modes of transport. These are freight transport, rail transport and aerospace transport encompassing also space stations. The book provides ideas for deployment which may be developed by scientists and engineers engaged in the design of Intelligent Transport Systems. It can also be used in the training of specialists, students and post-graduate students in universities and transport high schools.

Mountain Warfare and Other Lofty Problems Charles K. Bartles, Lester Grau, 2016 The United States has been in a mountain war in Afghanistan for almost a decade. Other nations have different, extensive experience in training and conduction mountain combat. Les Grau and Chuck Bartles gathered this experience in a detailed study aimed at being of use both to military professionals and others with an interest in military operations in mountainous terrain. Chapters include small and large unit actions, reconnaissance, artillery, small arms fire, logistics, communications, medicine and aviation. Much experience is drawn from Soviet efforts in Afghanistan during the 1980s, and modern Russian army training. The text is complemented by numerous maps and diagrams.

Operation Anaconda Lester W. Grau, Dodge Billingsley, 2011-11-25 Long before it became Obama's War, the long-running conflict in Afghanistan was launched by President George W. Bush in retaliation for the 9/11 attacks on the United States. Only a few months later, Operation Anaconda sent American-led coalition forces into their most intensely brutal confrontation with Al Qaeda and their Taliban hosts in the Shar-i Kot Valley near the Pakistan border. The result was an unexpected set piece of conventional fighting in what

has become an era of guerrilla warfare. Drawing upon previously unavailable or neglected sources, Lester Grau and Dodge Billingsley give us the most complete and accurate account of this thirteen-day firefight waged in mountainous terrain nearly two miles above sea level. They describe how allied troops fought a fierce and well-entrenched enemy to a standstill, close to an old Soviet battlefield, and then drove them completely out of Afghanistan. Grau and Billingsley's account also highlights problems encountered in Anaconda and the lessons we should learn from their in-depth study. The Army and Air Force operated under conflicting views regarding the appropriate application of Close Air Support, and airpower both crippled and aided the overall effort. In addition, severe shortages of transport, attack helicopters, and artillery hampered the effort, while the acquisition and timely sharing of intelligence barely occurred at all and coalition relations frayed under the intense pressures of combat. As an added bonus, the authors also include with the book a documentary on DVD that features interviews with soldiers who fought in Anaconda, provides additional information concerning major phases of the battle, and presents insightful commentary by Grau and by Billingsley, who was on the ground with U.S. forces for the operation. Providing the richest description and critique of all the forces involved-including those that fought on the enemy side-the combined book-and-DVD surpasses all previous accounts of this landmark engagement and is an essential volume in the literature on our war in Afghanistan.
