Gps Technology for Walking, Driving, Boating, Flying Jon Schiller, Dr, PhD, Jon Schiller, Ph.d., 2013-03-02 Your author was chief engineer on the Avionics for the F111 fighter aircraft which was the first military aircraft to include GPS for its navigation system. That was before the days of widespread use of NanoTechnology in electronics; as a result the F111 GPS was in a box the size of a Personal Computer and cost around half million dollars. I have a Tom-Tom GPS for my auto which is palm sized and cost a few hundred dollars. In 2012 I bought a 4 inch Samsung SIII smartphone which cost less than \$200 and which included a free GPS App. I also bought a Toshiba Thrive Tablet for less than \$300 which contains a free Google GPS App. GPS can be downloaded free to any Android mobile device. These free Google GPS Apps use Google navigation maps, for which you get charged data usage by your Android mobile server. You can download a more sophisticated GPS program that includes downloaded maps for which you pay a once only price, which avoids the data cost for using the maps which are stored in your mobile device memory. I took a test flight in the Caltech flying club aircraft that included a GPS navigation system with an easy to comprehend display. One of the benefits of this aircraft GPS is it would permit making IFR approaches to airports that lack an FAA ILS approach system, such as the airport here in Lompoc, CA, where I live. This book is intended to provide the status of GPS technology for use in walking, driving, boating and flying in 2013.

Building a Dedicated GSM GPS Module Tracking System for Fleet Management Franjieh El Khoury, Antoine Zghelb, 2020-06-30 Building a Dedicated GSM GPS Module Tracking System for Fleet Management: Hardware and Software solves the difficulties encountered from the disconnection of a network to collect the information from a satellite, the cost of using the Internet to download the data, and the non-adaptability of the open source applications (e.g., OpenGTS) with some Global Positioning System (GPS) devices to manage the data and edit required reports. The book focuses on the development of dedicated 3G module tracking systems and microcontrollers in order to provide greater efficiency in the INFelecPHY GPS Unit (IEP-GPS) model. This approach improves the existing models for the storage of the information when there is a disconnection from the network and provides flexibility to gather information, without the need of the Internet, faster and with less cost than existing systems. The model IEP-GPS is compatible with the open source application, OpenGTS, to track vehicles on diverse types of maps and edit a variety of reports. It also solves the problem of accessing and collecting data from the server of the provider company when there is no Internet connection, by integrating the implementation of the application on the local server of the company. Starting with the definition of GPS and the method for locating a position by GPS receiver, the book then reviews the different electronic equipment available by providing classification of microcontrollers and their different types with the effectiveness of each type. The various communication modules with the effectiveness of each module are presented next followed by an account of the development system of microcontroller applications and the various programming languages of the microcontrollers with the effectiveness of each language. The authors conclude by proposing a model IEP-GPS, based on the GPRS/3G module, to transmit the information from the IEP-GPS device to the end user, and the architecture of the model

with and without integration of a microcontroller. They also develop three modules of the proposed model in C programming language, Lua scripting language, and the AT command set. Book jacket.
