Frozen in Time Mitchell Zuckoff, 2013-04-23 NEW YORK TIMES BESTSELLER A gripping true story of survival, bravery, and honor in the vast Arctic wilderness during World War II, from Mitchell Zuckoff, the author of New York Times bestseller *Lost in Shangri-La* On November 5, 1942, a US cargo plane slammed into the Greenland Ice Cap. Four days later, the B-17 assigned to the search-and-rescue mission became lost in a blinding storm and also crashed. Miraculously, all nine men on board survived, and the US military launched a daring rescue operation. But after picking up one man, the Grumman Duck amphibious plane flew into a severe storm and vanished. *Frozen in Time* tells the story of these crashes and the fate of the survivors, bringing vividly to life their battle to endure 148 days of the brutal Arctic winter, until an expedition headed by famed Arctic explorer Bernt Balchen brought them to safety. Mitchell Zuckoff takes the reader deep into the most hostile environment on earth, through hurricane-force winds, vicious blizzards, and subzero temperatures. Moving forward to today, he recounts the efforts of the Coast Guard and North South Polar Inc.—led by indefatigable dreamer Lou Sapienza—who worked for years to solve the mystery of the Duck’s last flight and recover the remains of its crew. A breathtaking blend of mystery and adventure Mitchell Zuckoff’s *Frozen in Time: An Epic Story of Survival and a Modern Quest for Lost Heroes of World War II* is also a poignant reminder of the sacrifices of our military personnel and a tribute to the everyday heroism of the US Coast Guard.

Marine Corps Aviation Edward C. Johnson, USMC Lieutenant Colonel Edward Johnson, Graham A. Cosmas, 2014-06-18 This brief history of Marine aviation from 1912 to 1940 describes the efforts of Marines to secure their own air arm and recounts the early development of the Marine air-ground team. The story is drawn from official reports, documents, and personal correspondence, as well as from published historical works. It also draws heavily upon the transcribed reminiscences of notable Marine aviators collected and preserved by the Oral History Section of the History and Museums Division. From 1912, when First Lieutenant Alfred A. Cunningham became the first Marine to fly, through 1940, a handful of dedicated Marines worked to keep their Corps abreast of the progress of military aviation and to create an air arm specifically dedicated to supporting Marines in their amphibious mission. From a few daring men and a handful of primitive aircraft in 1912, Marine aviation grew into a force which met the test of combat in World War I. During the 1920s and 1930s, Marine aviators gradually developed a permanent organization and acquired aircraft of increasing reliability and improving performance. In small wars and expeditions in Haiti, the Dominican Republic, Nicaragua, and China, Marine fliers devised new techniques for supporting Marine infantry in combat, and they demonstrated the value of aviation in reconnaissance and in the movement of men and supplies over rough and usually roadless terrain. With the creation of the Fleet Marine Force in 1933, Marine aviation received formal recognition as an element of the amphibious air-ground team, and in the fleet landing exercises of the late 1930s began developing the doctrines and tactics which would make close air support a reality in World War II. The traditions of excellence and versatility established by these early Marine fliers lived on in the skies of Korea and Vietnam and remain vital today. This study of the formative years of Marine aviation is based on official reports and documents in the archives and holdings of the History and Museums Division and on personal memoirs and correspondence, as well as published historical works. It draws heavily on the writings of such pioneers of Marine aviation history as Robert L. Sherrod and Major Edna Loftus Smith, USMCR, and has benefited significantly from the efforts of such organizations as the First Marine Aviation Force Association and the Marine Corps Aviation Association to preserve the memory and record of early Marine aviation.

American Flying Boats and Amphibious Aircraft E.R. Johnson, 2016-03-29 This work is a comprehensive, heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States. It is divided into three chronological sections: the early era (1912–1928), the golden era (1928–1945), and the post-war era (1945–present), with historical overviews of each period. Within each section, individual aircraft types are listed in alphabetical order by manufacturer or builder, with historical background, technical specifications, drawings, and one or more photographs. Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage.

United States Naval Aviation, 1919–1941 E.R. Johnson, 2011-04-29 Within six months of the devastating attack on Pearl Harbor, the U.S. Navy had checked the Japanese military advance in the Pacific to the extent that the United States could return to its original “Defeat Germany First” strategy. That the Navy was able to accomplish this feat with only six fleet aircraft carriers and little more than 1,000 combat aircraft was not sheer luck but the culmination of more than two decades of determined preparation. This thorough study, with detailed drawings and photographs, explains and illustrates the trial and error process which went into developing the aircraft, airships and ships of the interwar period. The critical factors that shaped Naval Aviation after World War I—naval treaties, fleet tactics, government programs, leadership and organization, as well as the emergence of Marine Corps and Coast Guard aviation—are discussed in depth.

The Historic Aircraft and Spacecraft in the Cradle of Aviation Museum Joshua Stoff, 2001-01-01 Excellent pictorial history of famed aircraft and aviation memorabilia depicted in 90 rare photos and illustrations: replica of Lilienthal Glider (1894), the Curtiss JN-4 Jenny, America's most famous WW I airplane; Republic's P-47 Thunderbolt (1945), Grumman's Mobile Lunar Laboratory (Molab, 1964), and many other planes, spacecraft, rockets and missiles. Extensive captions.

US Navy PBV Catalina Units of the Atlantic War Ragnar J. Ragnarsson, 2012-12-20 Several books have been written about US naval patrol aviation in World War 2, but none do full justice to the role played by patrol squadrons of the US Navy in the longest, most bitterly fought campaign of the war the Battle of the Atlantic. From the Arctic to the Equator, anti-submarine aircraft of the US Navy patrolled both sides of the stormy Atlantic alongside their allied counterparts, escorting merchant shipping through submarine-infested waters the crucial lifeline from the United States to Great Britain and the Mediterranean, and staging troops and supplies for the ultimate liberation of North Africa and Europe. This book details the PBV Catalina, without contest the most successful flying boat ever designed, and a key element in the success of the Atlantic War.

Introduction to UAV Systems Paul Fahlstrom, Thomas Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. *Introduction to UAV Systems*, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. *Introduction to UAV Systems*, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

The Greatest Generation Tom Brokaw, 2000-02-23 The instant classic that changed the way we saw World War II and an entire generation of Americans, from the beloved journalist whose own iconic career has lasted more than fifty years. In this magnificent testament to a nation and her people, Tom Brokaw brings to life the extraordinary stories of a generation that gave new meaning to courage, sacrifice, and honor. From military heroes to community leaders to ordinary citizens, he profiles men and women who served their country with valor, then came home and transformed it: Senator Daniel Inouye, decorated at the front, fighting prejudice at home; Martha Settle Putney, one of the first black women to serve in the newly formed WACs; Charles Van Gorder, a doctor who set up a MASH-like medical facility in the middle of battle, then opened a small clinic in his hometown; Navy pilot and future president George H. W. Bush, assigned to read the mail of the enlisted men under him, who says that in doing so he “learned about life”; and many other laudable Americans. To this generation that gave so much and asked so little, Brokaw offers eloquent tribute in true stories of everyday heroes in extraordinary times. Praise for *The Greatest Generation* “Moving . . . a tribute to the members of the World War II

generation to whom we Americans and the world owe so much.”—The New York Times Book Review “Full of wonderful, wrenching tales of a generation of heroes. Tom Brokaw reminds us what we are capable of as a people. An inspiring read for those who wish their spirits lifted.”—Colin L. Powell “Offers welcome inspiration . . . It is impossible to read even a few of these accounts and not be touched by the book’s overarching message: We who followed this generation have lived in the midst of greatness.”—The Washington Times “Entirely compelling.”—The Wall Street Journal

Thud Ridge Jack Broughton,Hanson Baldwin,2006 This is the story of a special breed of warrior, the fighter-bomber pilot; the story of valiant men who flew the F-105 Thunderchief 'Thud' Fighter-Bomber over the hostile skies of North Vietnam. From the briefing rooms to the bombing runs, Vice-Wing Commander Colonel Jack Broughton, recounts the tragedy and heartache, the high drama and flaming terror, the exhilaration and thrill of life on the edge. He relives the incredible feeling of high-speed, low-level sorties where SAM missiles, flak and MiGs were all in a day's work. The bravery of the pilots and their commitment to each other in times of extreme fear, crisis and catastrophe are highlighted by vivid, fast moving flying sequences. Thud Ridgeis a fascinating and graphic memorial to the courage of the men, the power of their machines and their dedication to their mission.

Moon Lander Thomas J. Kelly,2012-01-11 Chief engineer Thomas J. Kelly gives a firsthand account of designing, building, testing, and flying the Apollo lunar module. It was, he writes, “an aerospace engineer’s dream job of the century.” Kelly’s account begins with the imaginative process of sketching solutions to a host of technical challenges with an emphasis on safety, reliability, and maintainability. He catalogs numerous test failures, including propulsion-system leaks, ascent-engine instability, stress corrosion of the aluminum alloy parts, and battery problems, as well as their fixes under the ever-present constraints of budget and schedule. He also recaptures the exhilaration of hearing Apollo 11’s Neil Armstrong report that “The Eagle has landed,” and the pride of having inadvertently provided a vital “lifeboat” for the crew of the disabled Apollo 13.
