The Swine Flu Affair Richard E. Neustadt, Harvey V. Fineberg, 1978 In 1976, a small group of soldiers at Fort Dix were infected with a swine flu virus that was deemed similar to the virus responsible for the great 1918-19 world-wide flu pandemic. The U.S. government initiated an unprecedented effort to immunize every American against the disease. While a qualified success in terms of numbers reached-more than 40 million Americans received the vaccine-the disease never reappeared. The program was marked by controversy, delay, administrative troubles, legal complications, unforeseen side effects and a progressive loss of credibility for public health authorities. In the waning days of the flu season, the incoming Secretary of what was then the Department of Health, Education and Welfare, Joseph Califano, asked Richard Neustadt and Harvey Fineberg to examine what happened and to extract lessons to help cope with similar situations in the future. The result was their report, *The Swine Flu Affair: Decision-Making on a Slippery Disease*.

Respiratory Protection for Healthcare Workers in the Workplace Against Novel H1N1 Influenza A Committee on Respiratory Protection for Healthcare Workers in the Workplace Against Novel H1N1 Influenza A, Institute of Medicine, 2009-09-03 In the event that the H1N1 virus creates a surge of patients during the upcoming flu season, it will be critical to protect health care workers from infection, given their central role in treating sick people and lessening the pandemic's overall impact. This new report from the Institute of Medicine recommends strategies for health care organizations and employees to prepare for the H1N1 virus. These recommendations include wearing fitted N95 respirators to guard against respiratory infection by the virus, and establishing policies for innovative triage processes, handwashing, disinfection, and more. The report also calls for a boost in research to answer questions about how the flu viruses can be spread, and to design and develop better protective equipment that would enhance workers' comfort, safety, and ability to do their jobs.

Influenza H1N1 Virus as a Global Issue Alfhonce Michael, 2017-02-06 Essay from the year 2016 in the subject Biology - Diseases, Health, Nutrition, grade: 67.5, Kenyatta University, language: English, abstract: This text gives a short introduction on the Influenza H1N1 Virus. The Viral Network Theresa MacPhail, 2015-03-03 In *The Viral Network*, Theresa MacPhail examines our collective fascination with and fear of viruses through the lens of the 2009 H1N1 pandemic. In April 2009, a novel strain of H1N1 influenza virus resulting from a combination of bird, swine, and human flu viruses emerged in Veracruz, Mexico. The Director-General of the World Health Organization (WHO) announced an official end to the pandemic in August 2010. Experts agree that the global death toll reached 284,500. The public health response to the pandemic was complicated by the simultaneous economic crisis and by the public scrutiny of official response in an atmosphere of widespread connectivity. MacPhail follows the H1N1 influenza virus's trajectory through time and space in order to construct a three-dimensional picture of what happens when global public health comes down with a case of the flu. *The Viral Network* affords a rare look inside the U.S. Centers for Disease Control, as well as Hong Kong's virology labs and Centre for Health Protection, during a pandemic. MacPhail looks at the day-to-day practices of virologists and epidemiologists to ask questions about the production of scientific knowledge, the construction of expertise, disease narratives, and the different cultures of public health in the United States, Europe, Hong Kong, and China. The chapters of the book move from the

micro to the macro, from Hong Kong to Atlanta, from the lab to the WHO, from the pandemic past in 1918 to the future. The various historical, scientific, and cultural narratives about flu recounted in this book show how biological genes and cultural memes become interwoven in the stories we tell during a pandemic. Ultimately, MacPhail argues that the institution of global public health is as viral as the viruses it tracks, studies, and helps to contain or eradicate. The global is itself viral in nature.

Global Time Bomb John M. Dorrance, 2009-05-01 Your guide to background, symptoms, treatment, and prevention of H1N1 swine flu and other potential global outbreaks--Cover.

Swine Flu Julia C. Marie, Thomas B. Johnson (Editor), 2013 Swine-origin influenza A (H1N1), better known as swine flu, was declared by the World Health Organization as a global pandemic in June 2009. The highly contagious influenza A H1N1 virus can cause either a mild influenza-like infection that is similar to seasonal influenza, or less frequently, a rapidly progressing community-acquired pneumonic illness that can cause acute respiratory failure and even death. This book addresses the signs/symptoms, epidemiology, preventive methods and treatment options for swine flu.

Swine Flu John, 2014-10-24 Words Swine Flu brings up a lot of extra fear and worry. Swine Flu is caused by Swine Influenza Virus (SIV). Origin of swine influenza virus is elusive. What You'll Get Inside: - Chapter 1: Swine Flu classification - Chapter 2: Swine Flu virus history - Chapter 3: Swine Flu virus today - Chapter 4: Swine Flu vaccine - Chapter 5: Swine Flu influenza (H1N1) symptoms - Chapter 6: Swine Flu treatment - Chapter 7: Swine Flu related information Swine Flu: Symptoms, Vaccine, Virus Treatment looks into Swine Flu and explores classification, history, symptoms, vaccine and treatment. This book provides the reader significant and substantial basic knowledge about Swine Flu. Take A Sneak Peak Inside: (Page 6) Before Spanish flu outbreak, Swine Flu was not known as a disease of pigs. Recent phylogenetic studies of recent virus strains in human, birds and swine suggest that human flu virus of 1918 came about after a reassortment event in some mammal. However, the exact strain of virus of 1918 still remains elusive. Next significant events in the history of Swine Flu were - a) isolation of Swine Flu virus from a pig in Iowa in 1931 and b) first isolation of human flu virus at Mill Hill in London in 1933. Clinical studies of these viruses revealed that these viruses - one in swine and the other in humans - had evolved and they were already genetically apart. Asian flu pandemic broke out in 1957. This time, the flu was caused by another strain of virus, namely, H2N2. Following this pandemic, which killed 1 - 1.5 million people worldwide, H1N1 strain was completely replaced by H2N2. Since Spanish flu, H1N1 virus has been circulating in humans. Now, they have disappeared: in their place, H2N2 viruses have come. The virus is reassortment of human flu H1N1 and an avian flu virus strain H2N2. Buy Now & Give Me Opportunity To Develop My Skills.
