Airlines and Air Mail F. Robert van der Linden,2014-07-11 Conventional wisdom credits only entrepreneurs with the vision to create America's commercial airline industry and contends that it was not until Roosevelt's Civil Aeronautics Act of 1938 that federal airline regulation began. In *Airlines and Air Mail*, F. Robert van der Linden persuasively argues that Progressive republican policies of Herbert Hoover actually fostered the growth of American commercial aviation. Air mail contracts provided a critical indirect subsidy and a solid financial foundation for this nascent industry. Postmaster General Walter F. Brown used these contracts as a carrot and a stick to ensure that the industry developed in the public interest while guaranteeing the survival of the pioneering companies. Bureaucrats, entrepreneurs, and politicians of all stripes are thoughtfully portrayed in this thorough chronicle of one of America's most resounding successes, the commercial aviation industry.

Vietnam Studies Col Francis J. Kelly,2016-12-10 As long ago as 1957, U.S. Army Special Forces soldiers were in the Republic of Vietnam. going about their business of training, advising, and assisting members of the Vietnamese Army. Despite the old Army witticism about never volunteering for anything, the Special Forces soldier is, in fact, a double volunteer, having first volunteered for airborne training and then again for Special Forces training. From a very meager beginning but sustained by a strong motivation and confidence in his mission, the Special Forces soldier has marched through the Vietnam struggle in superb fashion. In 1957 some fifty-eight Vietnamese soldiers were given military training by Special Forces troops. Ten years later the Special Forces were advising and assisting over 40,000 paramilitary troops, along with another 40,000 Regional Forces and Popular Forces soldiers. This monograph traces the development and notes the progress, problems, successes, and failures of a unique program undertaken by the U.S. Army for the first time in its history. It is hoped that all the significant lessons learned have been recorded and the many pitfalls of such a program uncovered. I am

responsible for the conclusions reached, yet my thought processes could not escape the influence of the many outstanding officers and men in the Special Forces who joined in the struggle. Particularly, I must take note of the contributions of the Special Forces noncommissioned officers, without question the most competent soldiers in the world. With the withdrawal of the Special Forces from Vietnam in 1971, the Army could honestly lay claim to a new dimension in ground warfare--the organized employment of a paramilitary force in sustained combat against a determined enemy. I know I speak for my predecessors and successors in claiming that the 5th Special Forces Group (Airborne) was the finest collection of professional soldiers ever assembled by the U.S. Army, anywhere, anytime. Francis John Kelly Colonel, Armor 1972

Totch Loren G. Brown, 2018-12 Totch Brown's memoirs of vanished days in the Ten Thousand Islands and the Everglades--the last real frontier in Florida, and even today the greatest roadless wilderness in the United States--are invaluable as well as vivid and entertaining, for Totch is a natural-born story-teller, and his accounts of fishing and gator hunting as well as his life beyond the law as gator poacher and drug runner are evocative and colorful, fresh and exciting.--from the foreword by Peter Matthiessen In the mysterious wilderness of swamps, marshes, and rivers that conceals life in the Florida Everglades, Totch Brown hung up his career as alligator hunter and commercial fisherman to become a self-confessed pot smuggler. Before the marijuana money rolled in, he survived excruciating poverty in one of the most primitive and beautiful spots on earth, Chokoloskee Island, in the mangrove keys known as the Ten Thousand Islands located at the western gateway to the Everglades National Park. Until he wrote this memoir--recollections from his childhood in the twenties that merge with reflections on a way of life dying at the hands of progress in the nineties--Totch had never read a book in his life. Still, his writing conveys the tension he experienced from trying to live off the land and within the laws of the land. Told with energy and authenticity, his story begins with the handful of souls who came to the area a hundred years ago to homestead on the high ground formed from oyster mounds built and left by the Calusa Indians. They lived close to nature in shacks built of tin or palmetto fans; they ate wild meat, Chokoloskee chicken (white ibis), swamp cabbage, even--when they were desperate--manatee; and they weathered all manner of natural disaster from hurricanes to swarms of swamp angels (mosquitoes). In his grandpa's day, Totch writes, outlaws and cutthroats would shoot a man down just as quick as they'd knock down an egret, especially if he came between them and the plume birds. His grandparents were both contemporaries of Ed J. Watson, the subject of Peter Matthiessen's best-selling *Killing Mr. Watson*, and Totch is featured in the recent award-winning PBS film *Lost Man's River: An Everglades Adventure* with Peter Matthiessen. He also appeared in *Wind Across the Everglades*, the 1957 Budd Schulberg movie in which Totch and Burl Ives sing some of Totch's Florida cracker songs. Loren G. Totch Brown was born in Chokoloskee, Florida, in 1920. After purchasing his first motorboat at the age of thirteen (and retiring from formal schooling after the seventh grade) he worked as an alligator hunter, commercial fisherman, crabber, professional guide, poacher, marijuana runner, singer, and songwriter.

Guide for Establishing and Maintaining Pest Free Areas Food and Agriculture Organization of the United Nations, International Plant Protection Convention, 2019-10-15 The purpose of the Guide is to support national plant protection organizations (NPPOs) who wish to establish and maintain pest free areas (PFA) including places and/or

production sites (PFPP and PFPS) as well as areas of low pest prevalence (ALPP). To facilitate an understanding of the processes to establish and maintain PFAs and ALPPs, a diagram in the form of a decision tree was constructed that identifies and outlines five general phases of programme development as follows: initiation, feasibility, establishment, maintenance, and market access phases. The guide is then divided into corresponding sections that describe what the key elements of each phase are, why these elements are important, what some of the common challenges and pitfalls are, and factors that may influence the success of the different phases such as budget stability, public outreach, availability of good survey and control tools, and open engagement with stakeholders and trading partners. By providing a deeper understanding of the factors that should be considered when establishing a PFA, PFPP, PFPS or ALPP the guide aims to overcome the challenges and maximize the impact of these efforts to the benefit of all parties. The guide concludes by providing a number of case studies from around the world that highlight successful PFA and ALPP programmes and how they deal with particular key issues. This guide contains current experience and the most advanced phytosanitary procedures in the implementation of PFA and ALPP, however, it is subjected to revision and updates as new developments are made available.

A fascinating, cutting-edge, research topic, autonomous mobile robotics is now taught in more and more universities. In this book you are introduced to the fundamental concepts of this complex field via twelve detailed case studies that show how to build and program real working robots. Topics covered include learning, autonomous navigation in unmodified, noisy and unpredictable environments, and high fidelity robot simulation. This new edition has been updated to include a new chapter on novelty detection, and provides a very practical introduction to mobile robotics for a general scientific audience. It is essential reading for 2nd and 3rd year undergraduate students and postgraduate students studying robotics, artificial intelligence, cognitive science and robot engineering. The update and overview of core concepts in mobile robotics will assist and encourage practitioners of the field and set challenges to explore new avenues of research in this exiting field. The author is Senior Lecturer at the Department of Computer Science at the University of Essex. A very fine overview over the relevant problems to be solved in the attempt to bring intelligence to a moving vehicle. Professor Dr. Ewald von Puttkamer, University of Kaiserslautern Case studies show ways of achieving an impressive repertoire of kinds of learned behaviour, navigation and map-building. The book is an admirable introduction to this modern approach to mobile robotics and certainly gives a great deal of food for thought. This is an important and thought-provoking book. Alex M. Taking Flight National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Education and Training for Civilian Aviation Careers, 1997-03-14 The commercial aviation industry is a major part of the U.S. transportation infrastructure and a key contributor to the nation's economy. The industry is facing the effects of a reduced role by the military as a source of high-quality trained personnel, particularly pilots and mechanics. At the same time, it is facing the challenges of a changing American workforce. This book is a study of the civilian training and education programs needed to satisfy the work-force requirements of the commercial aviation industry in the year 2000 and beyond, with particular emphasis on issues related to access to aviation careers by women and minorities.

In Pursuit of the Unknown Ian Stewart, 2012-03-13 The seventeen equations that form the basis for life as we know it. Most people are familiar with history's great equations: Newton's Law of Gravity, for instance, or Einstein's theory of relativity. But the way these mathematical breakthroughs have contributed to human progress is seldom appreciated. In *In Pursuit of the Unknown*, celebrated mathematician Ian Stewart untangles the roots of our most important mathematical statements to show that equations have long been a driving force behind nearly every aspect of our lives. Using seventeen of our most crucial equations -- including the Wave Equation that allowed engineers to measure a building's response to earthquakes, saving countless lives, and the Black-Scholes model, used by bankers to track the price of financial derivatives over time -- Stewart illustrates that many of the advances we now take for granted were made possible by mathematical discoveries. An approachable, lively, and informative guide to the mathematical building blocks of modern life, *In Pursuit of the Unknown* is a penetrating exploration of how we have also used equations to make sense of, and in turn influence, our world.
