Software-Defined Radio for Engineers Alexander M. Wyglinski, Robin Getz, Travis Collins, Di Pu, 2018-04-30 Based on the popular Artech House classic, *Digital Communication Systems Engineering with Software-Defined Radio*, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field.

Mummy Portraits of Roman Egypt Marie Svoboda, Caroline Cartwright, 2020-08-25
This publication presents fascinating new findings on ancient Romano-Egyptian funerary portraits preserved in international collections. Once interred with mummified remains, nearly a thousand funerary portraits from Roman Egypt survive today in museums around the world, bringing viewers face-to-face with people who lived two thousand years ago. Until recently, few of these paintings had undergone in-depth study to determine by whom they were made and how. An international collaboration known as APPEAR (Ancient Panel Paintings: Examination, Analysis, and Research) was launched in 2013 to promote the study of these objects and to gather scientific and historical findings into a shared database. The first phase of the project was marked with a two-day conference at the Getty Villa. Conservators, scientists, and curators presented new research on topics such as provenance and collecting, comparisons of works across institutions, and scientific studies of pigments, binders, and supports. The papers and posters from the conference are collected in this publication, which offers the most up-to-date information available about these fascinating remnants of the ancient world. The free online edition of this open-access publication is available at www.getty.edu/publications/mummyportraits/ and includes zoomable illustrations and graphs. Also available are free PDF, EPUB, and Kindle/MOBI downloads of the book.

Well Played 1.0 Drew Davidson, 2009-01-01 Video games can be well played in two senses. On the one hand, well played is to games as well read is to books. On the other hand, well played as in well done. This book is full of in-depth close readings of video games that parse out the various meanings to be found in the experience of playing a game. 22 contributors (developers, scholars, reviewers and bloggers) look at video games through both senses of well played. The goal is to help develop and define a literacy of games as well as a sense of their value as an experience. Video games are a complex medium that merits careful interpretation and insightful analysis

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a

platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

The Empathy Exams Leslie Jamison, 2014-04-01 From personal loss to phantom diseases, *The Empathy Exams* is a bold and brilliant collection, winner of the Graywolf Press Nonfiction Prize A Publishers Weekly Top Ten Essay Collection of Spring 2014 Beginning with her experience as a medical actor who was paid to act out symptoms for medical students to diagnose, Leslie Jamison's visceral and revealing essays ask essential questions about our basic understanding of others: How should we care about each other? How can we feel another's pain, especially when pain can be assumed, distorted, or performed? Is empathy a tool by which to test or even grade each other? By confronting pain—real and imagined, her own and others'—Jamison uncovers a personal and cultural urgency to feel. She draws from her own experiences of illness and bodily injury to engage in an exploration that extends far beyond her life, spanning wide-ranging territory—from poverty tourism to phantom diseases, street violence to reality television, illness to incarceration—in its search for a kind of sight shaped by humility and grace.

and Gynaecology Walter Prendiville, Walter Prendiville, Rengaswamy Sankaranarayanan, 2017-06 This colposcopy manual was developed in the context of the cervical cancer screening research studies of the International Agency for Research on Cancer (IARC) and the related technical support provided to national programs. It is thus a highly comprehensive manual, both for the training of new colposcopists and for the continuing education and reorientation of those who are more experienced. This manual offers a valuable learning resource, incorporating recent developments in the understanding of the etiology and pathogenesis of cervical intraepithelial neoplasia (CIN), as well as in colposcopy and cervical pathology. Expertise in performing satisfactory, safe, and accurate colposcopic examinations requires high competence in the technical, interpretive, and cognitive aspects, and the capability to develop pragmatic and effective management plans and treatment. This comprehensive and concise manual covers all these aspects and serves as a useful handbook for acquiring the necessary skills for the visual recognition and interpretation of colposcopic findings and for developing the personal and professional attributes required for competence in colposcopy.

Ancient and Fossil Bone Collagen Remnants Brian Thomas (Science writer), 2019
Do creation scientists do actual science, or do they just propagate religious talking points? Ancient and Fossil Bone Collagen Remnants, based on Dr. Brian Thomas' PhD dissertation, answers this question. Intended for the technical science reader, it reveals results from research projects designed to address questions about the presence or absence, geographic and stratigraphic extent, and decay rate of collagen in ancient bones. Not only do the experiments and descriptions found in this volume show that yes, creation scientists do real science, but they also provide the solid technical background needed to address the question of why short-lived collagen has been found in supposedly very old dinosaur bones-

Deception Point Dan Brown, 2019-07-30 From the #1 New York Times bestselling author of *The Da Vinci Code*, *Angels & Demons*, and *Inferno* and the “master of smart thrills” (People) comes a “rocket-fast thriller” (Vince Flynn) about an astonishing NASA discovery that unravels a deadly conspiracy that leads all the way to the White House. When a NASA satellite spots evidence of an astoundingly rare object buried deep in the Arctic ice, the floundering space agency proclaims a much-needed victory—one that could have profound implications for US space policy and the impending presidential election. With his re-election hanging in the balance, the President sends White House Intelligence analyst Rachel Sexton to the Milne Ice Shelf to verify the authenticity of the find. Accompanied by a team of experts, including the charismatic academic Michael Tolland, Rachel uncovers the unthinkable: evidence of scientific trickery. Before she can contact the President, she and Michael are attacked by a deadly team of assassins controlled by a mysterious power broker who will stop at nothing to hide the truth. Fleeing for their lives in an environment as desolate as it is lethal, their only hope for survival is to find out who is behind this masterful ploy. The truth, they will learn, is the most shocking deception of all in this “taut, fast-paced, barn-burner of a book” (St. Petersburg Times).
