Hideo Mohri

Imperial Biologists Hideo Mohri, 2019-03-26 This book sheds light on a little-known aspect of the Imperial family of Japan: For three generations, members of the family have devoted themselves to biological research. Emperor Showa (Hirohito) was an expert on hydrozoans and slime molds. His son, Emperor Akihito, is an ichthyologist specializing in gobioid fishes, and his research is highly respected in the field. Prince Akishino, Emperor Akihito's son, is known for his research on giant catfish and the domestication of fowl, while Prince Hitachi, Emperor Akihito's brother, has conducted research on cancer in animals. The book shows how they became interested in biology, how seriously they were committed to their research, what their main scientific contributions are, and how their achievements are valued by experts at home and abroad. To commemorate the 60-year reign of Emperor Showa and his longtime devotion to biology, the International Prize for Biology was founded in 1985. The prize seeks to recognize and encourage researches in basic biology. A list of winners and a summary of their research are presented in the last part of the book. The author, an eminent biologist who has given lectures to the Imperial Family, explains their research and tells the fascinating story of biology and the Imperial Family of Japan. The book is a valuable resource, not only for biology students and researchers, but also for historians and anyone interested in science and the Royal and Imperial families.

U. S. Coast Guard Island Class 110 WPB Dominic S. Cusanelli, Liam O'Connell, 1999-11-01 Model experiments were performed to evaluate the performance of a stern flap on a U.S. Coast Guard Island Class 110 WPB patrol boat. Several stern flap designs of various chord lengths, spans, and angles were evaluated. The selected stern flap design was based upon maximizing power reduction at high speed, while satisfying secondary powering criteria prescribed at cruising speed and best economic speed, and limits set on desired running trim angle. A stern flap with chord length 2 ft. (0.61 m), span of 8.7 ft. (2.7 m), and an angle of 7.5 degrees trailing edge down, is recommended for installation on the Island Class. At full load, with the stern flap installed, the maximum attainable speed will increase by 0.8 knots. The stern flap maximum power reduction of 5.8 percent was attained at 16 knots. This 5.8% powering reduction includes an empirical 1.5% reduction for stern flap scaling effects as determined from tests on other ship models. Stern flap annual fuel savings for the Island Class is estimated at more than 13,000 gallons/year. The time to recover the estimated cost for stern flap fabrication and installation is less than one year. It is recommended that bow spray rails also be installed in the Island Class. The bow spray rails affected a significant reduction in the amount of spray and forward deck-wetting generated at the bow. A new DTMB Model 5526 was constructed for this project. A ship/model correlation allowance of $CA = 0.0003$ was estimated from a powering comparison between BAINBRIDGE ISLAND (WPB 1343) and Model 5526.
